AAPC CPC Practice Exam A with Answers

1: 46-year-old female had a previous biopsy that indicated positive malignant margins anteriorly on the right side of her neck. A 0.5 cm margin was drawn out and a 15 blade scalpel was used for full excision of an 8cm lesion. Layered closure was performed after the removal. The specimen was sent for permanent histopathologic examination. What are the code(s) for this procedure?

- A. 11626
- B. 11626, 12004-51
- C. 11626, 12044-51
- D. 11626, 13132-51, 13133 - ✓

2: 30-year-old female is having 15 sq cm debridement performed on an infected ulcer with eschar on the right foot. Using sharp dissection, the ulcer was debrided all the way to down to the bone of the foot. The bone had to be minimally trimmed because of a sharp point at the end of the metatarsal. After debriding the area, there was minimal bleeding because of very poor circulation of the foot. It seems that the toes next to the ulcer may have some involvement and cultures were taken. The area was dressed with sterile saline and dressings and then wrapped. What CPT® code should be reported?

- A. 11043
- B. 11012
- C. 11044
- D. 11042 - ✓

3: 64-year-old female who has multiple sclerosis fell from her walker and landed on a glass table. She lacerated her forehead, cheek and chin and the total length of these lacerations was 6 cm. Her right arm and left leg had deep cuts measuring 5 cm on each extremity. Her right hand and right foot had a total of 3 cm lacerations. The ED physician repaired the lacerations as follows: The forehead, cheek, and chin had debridement and cleaning of glass debris with the lacerations being closed with one layer closure, 6-0 Prolene sutures. The arm and leg were repaired by layered closure, 6-0 Vicryl subcutaneous sutures and prolene sutures on the skin. The hand and foot were closed with adhesive strips. Select the appropriate procedure codes for this visit.

- A. 99283-25, 12014, 12034-59, 12002-59, 11042-51
- B. 99283-25, 12053, 12034-59, 12002-59
- C. 99283-25, 12014, 12034-59, 11042-51
- D. 99283-25, 12053, 12034-59 - ✓

4: 52-year-old female has a mass growing on her right flank for several years. It has finally gotten significantly larger and is beginning to bother her. She is brought to the Operating Room for definitive excision. An incision was made directly overlying the mass. The mass was down into the subcutaneous tissue and the surgeon encountered a well encapsulated lipoma approximately 4 centimeters. This was excised primarily

CPC Online Lab Simulation - Exam CPC Quick Prep

VCE4Plus AAPC CPC Exam Training materials can help you to come true your dreams. Because it contains all the questions of AAPC CPC examination. With VCE4Plus, you could throw yourself into the exam preparation completely. With high quality training materials by VCE4Plus provided, you will certainly pass the exam. VCE4Plus can give you a brighter future.

AAPC Certified Professional Coder (CPC) Exam Sample Questions (Q165-

Q170):

NEW QUESTION # 165

A woman with vulvar intraepithelial neoplasia (VIN II) undergoes a partial vulvectomy (<80%) with removal of skin and deep subcutaneous tissue.

What CPT and ICD-10-CM codes are reported?

- A. 56630, N90.1
- B. 56625, N90.1
- C. 56620, N90.3
- **D. 56633, D07.1**

Answer: D

Explanation:

56633 = Radical partial vulvectomy

Deep subcutaneous tissue involvement = radical, not simple

VIN II is coded as D07.1 (carcinoma in situ of vulva) per ICD-10-CM guidelines

NEW QUESTION # 166

An elderly patient comes into the emergency department (ED) with shortness of breath. An ECG is performed. The final diagnosis at discharge is impending myocardial infarction.

According to ICD-10-CM guidelines, how is this reported?

- A. I20.0
- B. I20.0, R06.02
- C. R06.02
- **D. I21.3, R06.02**

Answer: D

Explanation:

Impending myocardial infarction is reported with I21.3 for a myocardial infarction (acute). The shortness of breath, which is a symptom, is coded separately as R06.02. According to ICD-10-CM guidelines, when a definitive diagnosis is established, the diagnosis code is sequenced first followed by symptom codes.

References: ICD-10-CM (current year), Chapter 9: Diseases of the Circulatory System (I00-I99), ICD-10-CM Official Guidelines for Coding and Reporting, Section I.C.9.e.4.

NEW QUESTION # 167

A 44-year-old female patient with chest pains had a CT of her chest that identified a mass in her left lower lung. The patient currently has ovarian cancer with metastases to the liver. The radiologist suspects the cancer has spread to her lungs. The physician performed an outpatient bronchoscopic biopsy and the pathology report documents the mass as a tumor of uncertain behavior.

What ICD-10-CM codes are reported for this patient?

- **A. D38.1, C56.9, C78.7**
- B. R91.8, C56.9, C78.7
- C. C56.9, C78.7, C78.02
- D. C78.02, C22.9, C79.82

Answer: A

Explanation:

For a patient with a mass in the left lower lung suspected to be cancer that is currently documented as a tumor of uncertain behavior, with existing ovarian cancer with metastases to the liver, the ICD-10-CM codes are:

D38.1: Neoplasm of uncertain behavior of bronchus and lung.

C56.9: Malignant neoplasm of unspecified ovary.

C78.7: Secondary malignant neoplasm of liver and intrahepatic bile duct.

D38.1 is used because the behavior of the lung tumor is uncertain, and C56.9 and C78.7 are used to document the known primary and metastatic cancers.

NEW QUESTION # 168

A patient presents to the emergency room with a nosebleed that is controlled by limited anterior nasal packing. What CPT code is reported?

- A. 0
- **B. 1**
- C. 2
- D. 3

Answer: B

Explanation:

30901 = Control of anterior epistaxis, limited, any method
30903/30905/30906 are for extensive packing or posterior epistaxis

NEW QUESTION # 169

A 60-year-old male has three-vessel disease and supraventricular tachycardia which has been refractory to other management. He previously had pacemaker placement and stenting of LAD coronary artery stenosis, which has failed to solve the problem. He will undergo CABG with autologous saphenous vein and an extensive modified MAZE procedure to treat the tachycardia. He is brought to the cardiac OR and placed in the supine position on the OR table. He is prepped and draped, and adequate endotracheal anesthesia is assured. A median sternotomy incision is made and cardiopulmonary bypass is initiated. The endoscope is used to harvest an adequate length of saphenous vein from his left leg. This is uneventful and bleeding is easily controlled. The vein graft is prepared and cut to the appropriate lengths for anastomosis. Two bypasses are performed: one to the circumflex and another to the obtuse marginal. The left internal mammary is then freed up and it is anastomosed to the ramus, the first diagonal, and the LAD. An extensive maze procedure is then performed and the patient is weaned from bypass. At this point, the sternum is closed with wires and the skin is reapproximated with staples. The patient tolerated the procedure without difficulty and was taken to the PACU. Choose the procedure codes for this surgery.

- A. 33535, 33259, 33519, 33508
- B. 33533, 33257-51, 33519-51, 33508-51
- **C. 33535, 33259 51, 33519-51, 33508-51**
- D. 33533, 33257, 33519, 33508

Answer: C

Explanation:

The CABG procedure involved multiple bypasses, with the use of autologous saphenous vein grafts and the left internal mammary artery, along with an extensive modified MAZE procedure. CPTcode 33535 describes a coronary artery bypass using arterial grafts, including at least three coronary artery bypasses. CPTcode 33259-51 is for the MAZE procedure for supraventricular tachycardia, with the -51 modifier indicating multiple procedures. CPTcode 33519-51 is for an additional vein graft, and CPTcode 33508-51 describes the endoscopic harvesting of the vein.
