## PL-400 Reliable Braindumps Ebook, PL-400 Dump Torrent

The DumpsValid offers valid, updated, and real Microsoft Power Platform Developer PL-400 exam practice questions that perfectly and quickly prepare the PL-400 exam candidates. You can easily pass the challenging Microsoft Power Platform Developer PL-400 Certification Exam. PL-400 exam practice test questions you will get everything that you need to learn, prepare and pass the valuable PL-400 certification with good scores.

## Microsoft Power Platform Developer Sample Questions (Q68-Q73):

### NEW QUESTION # 68

You need to select connectors for the app.

Which types of connectors should you use? To answer, drag the appropriate connectors to the correct requirements. Each connector may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

### Connectors

|   |
|---|
| Create a custom connector.                    |
| Use an AppSource connector.                   |
| Use a native application function.            |
| Create a connector with a Postman collection. |

### Requirement

View full registration records.

View customer names.

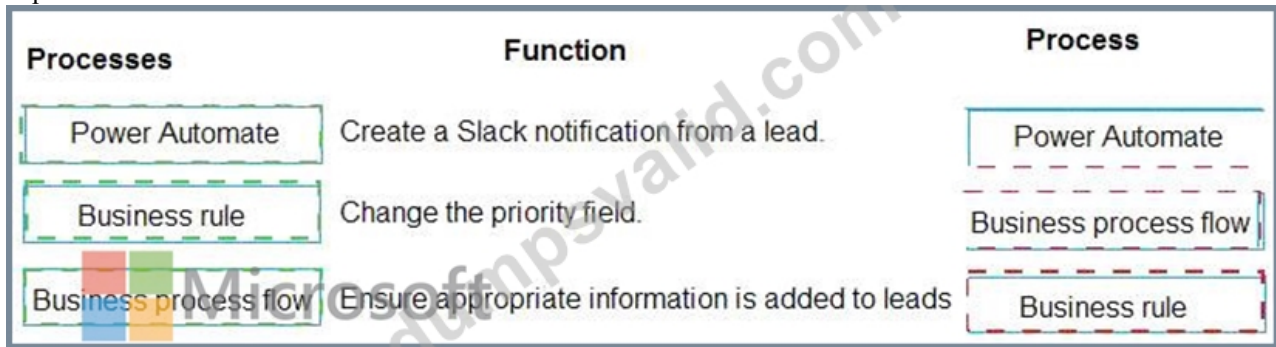

View daily registrations.

### Connectors

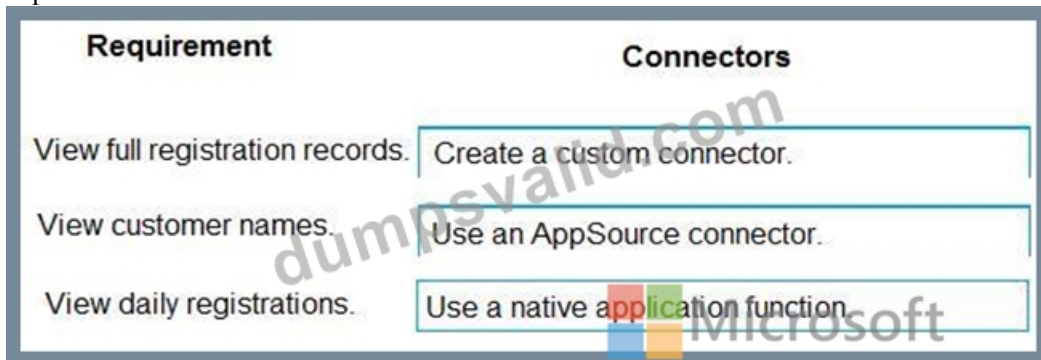

|  |
|--|
|  |
|  |
|  |

**Answer:**

**Explanation:**

**Explanation**

**Box 1: Create a custom connector**

A custom connector is a wrapper around a REST API (Logic Apps also supports SOAP APIs) that allows Logic Apps, Power Automate, or Power Apps to communicate with that REST or SOAP API.

**Box 2: Use an AppSource connector**

You can only retrieve the Customer, UnifiedActivity, and Segments entities through the Power Apps connector. Other entities are shown because the underlying connector supports them through triggers in Power Automate.

Scenario: Customer information is stored in the Accounts entity.

**Box 3: Use a native application function**

You must produce a report that details the number of registrations for a day and send the report as a PDF to the management team.

## **NEW QUESTION # 69**

You are developing a Power Platform app for a school. The school plans to use the app to gather information about classes and students.

You must design a plug-in for the app. You must store data about students in the Contacts table and store data about classes in a custom table.

You need to select the stage in the event pipeline for each function.

Which stages should you use? To answer, drag the appropriate plug-in stages to the correct functions. Each plug-in stage may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

**NOTE:** Each correct selection is worth one point.

| Plug-in stages | Answer Area  | Plug-in stage |
|----------------|--|---------------|
| PreValidation  | Cancel a class if the student is over 15 years old.                                    |               |
| PreOperation   | Update the record being processed by the plug-in step and rollback if an error occurs. |               |
| PostOperation  | Add a student to the appropriate class.  |               |

**Answer:**

Explanation:

| Plug-in stages | Answer Area  | Plug-in stage |
|----------------|--|---------------|
| PreValidation  | Cancel a class if the student is over 15 years old.                                    | PreValidation |
| PreOperation   | Update the record being processed by the plug-in step and rollback if an error occurs. | PreOperation  |
| PostOperation  | Add a student to the appropriate class.  | PostOperation |

#### NEW QUESTION # 70

An organization uses Dynamics 365 Sales. The organization has accounting and customer service departments. You must restrict users in customer service from being able to change the value of the balance field on the Contact records. The accounting team must be the only team able to edit this field. You need to create the appropriate solution without any customizations. What should you do first?

- A. Enable field security for the balance field and grant the customer service team read permissions.
- B. Enable field security for the balance field and grant the accounting team read permissions.
- C. Create a customer service form and role and make the balance field read-only.
- D. Enable field security for the balance field and grant the customer service team read and update permissions.

**Answer: C**

Explanation:

Improve user's productivity with the new forms in the Customer Service Hub. The form type of the new forms is Main. The Main forms come with an improved user experience optimized for agent productivity, helping to maintain context while working on related records. Main forms provide the primary interface where the agents can view and interact with their data in Microsoft Dynamics 365 Customer Service.

#### NEW QUESTION # 71

You need to resolve the funding application issue. Which component should you use?

- A. unsecure config
- B. environment variable
- C. settings
- D. secure config

Answer: B

### NEW QUESTION # 72

A company has a Common Data Service (CDS) environment.

All accounts in the system with a relationship type of Customer set must have an account number. A plug-in has been developed.

When a Customer is updated with a relationship type, the plug-in sets the account number if not provided by the user.

You need to register the plug-in.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

**Actions**

In the Plug-in Registration tool, select **Register New Image**, change the Image type be a **PostImage**, and ensure the accountnumber is included as a parameter.

In the Plug-in Registration tool, select **Register New Image**, change the Image type be a **PrelImage**, and ensure the accountnumber is included as a parameter.

In the Plug-in Registration tool, select **Register New Step** and set the Message to **Update**, Primary Entity to **Account**, and Event Pipeline Stage of PreValidation.

In the Plug-in Registration tool, select **Register New Assembly**.

In the Plug-in Registration tool, select **Register New Step**. Set the Message to **Update**, Primary Entity to **Account**, and Event Pipeline Stage of PreOperation.

**Answer area**

Answer:

Explanation:

**Actions**

In the Plug-in Registration tool, select **Register New Image**, change the Image type be a **PostImage**, and ensure the accountnumber is included as a parameter.

In the Plug-in Registration tool, select **Register New Image**, change the Image type be a **PrelImage**, and ensure the accountnumber is included as a parameter.

In the Plug-in Registration tool, select **Register New Step** and set the Message to **Update**, Primary Entity to **Account**, and Event Pipeline Stage of PreValidation.

In the Plug-in Registration tool, select **Register New Assembly**.

In the Plug-in Registration tool, select **Register New Step**. Set the Message to **Update**, Primary Entity to **Account**, and Event Pipeline Stage of PreOperation.

**Answer area**

Explanation:

In the Plug-in Registration tool, select **Register New Assembly**.

In the Plug-in Registration tool, select **Register New Step**. Set the Message to **Update**, Primary Entity to **Account**, and Event Pipeline Stage of PreOperation.

In the Plug-in Registration tool, select **Register New Image**, change the Image type be a **PrelImage**, and ensure the accountnumber is included as a parameter.

Explanation:

Step 1: In the Plug-in Registration tool, select Register New Assembly.

You use the Plug-in Registration tool (PRT) to register your plug-in assemblies and steps.

Registering an assembly is the process of uploading the assembly to the Dataverse database.

Step 2: In the Plug-in Registration tool, Select Register New Step,...PreOperation PreOperation occurs before the main system operation and within the database transaction.

If you want to change any values for an entity included in the message, you should do it here.

Step 3: In the Plug-in Registration tool, Select Register New Image, change the Image type to be a PreImage, and..

If your plug-in step is registered in the PreValidation or PreOperation stages of the execution pipeline, you could use the

Organization service to retrieve the current value of the property, but this is not a good practice for performance. A better practice is to define a pre-entity image with your plug-in step registration.
