Microsoft AZ-900 exam is an entry-level certification exam that is highly recommended for individuals who are looking to start their journey in cloud computing. It is a great way to learn about the fundamentals of cloud computing and how Microsoft Azure services can help organizations in their digital transformation journey. AZ-900 exam is also a great way to validate your skills and knowledge in cloud computing and Microsoft Azure services.

The Microsoft AZ-900 Exam is available in multiple languages, and the test format comprises multiple-choice questions that need to be completed within 60 minutes. AZ-900 exam fee is \$99, and individuals who pass the exam receive the Microsoft Certified Azure Fundamentals certification. Microsoft Azure Fundamentals certification validates an individual's understanding of cloud computing and their ability to use Microsoft Azure to solve business problems.

Microsoft Azure Fundamentals Sample Questions (Q310-Q315):

NEW QUESTION # 310

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You plan to deploy several Azure virtual machines.

You need to ensure that the services running on the virtual machines are available if a single data center fails.

Solution: You deploy the virtual machines to two or more regions.

Does this meet the goal?

- A. Yes
- B. No

Answer: A

Explanation:

By deploying the virtual machines to two or more regions, you are deploying the virtual machines to multiple datacenters. This will ensure that the services running on the virtual machines are available if a single data center fails.

Azure operates in multiple datacenters around the world. These datacenters are grouped in to geographic regions, giving you flexibility in choosing where to build your applications.

You create Azure resources in defined geographic regions like 'West US', 'North Europe', or 'Southeast Asia'. You can review the list of regions and their locations. Within each region, multiple datacenters exist to provide for redundancy and availability.
