## Citrix Virtual Apps and Desktops Administration Sample Questions (Q13-Q18):

### NEW QUESTION # 13

Scenario: A user is working on a document in an HDX session and saves data on the desktop. The Virtual Delivery Agent (VDA) session abruptly crashes, causing the saved data to be lost. Which Citrix Profile Management policy can a Citrix Administrator enable to prevent data loss?

- A. Profile Caching
- B. Profile Streaming
- **C. Active Write Back**
- D. Delay Cached Profile Deletion

**Answer: C**

Explanation:

Active Write Back ensures that changes made during the session, such as saving files to the desktop, are written back to the user profile in real time. This prevents data loss if the VDA session crashes unexpectedly.

### NEW QUESTION # 14

Scenario: A Citrix Administrator needs to create local user accounts for other administrators with limited privileges. The other administrators will need only:

- Read-only access
- The ability to enable and disable services and servers

Which built-in Command Policy permission level can the administrator use?

- A. Read-Only
- B. Sysadmin
- C. Network
- **D. Operator**

**Answer: D**

### NEW QUESTION # 15

Scenario: A Citrix Administrator needs to power-manage a group of Server OS Virtual Delivery Agent (VDA) machines that are all in the same Delivery Group. The administrator needs all the machines to be restarted once a week during the weekend. Additionally, a subset of the machines should be restarted every day during non-peak hours. Which feature must the administrator change from the default values in order to fulfill the requirements?

- **A. Tag restrictions**
- B. Restart duration
- C. Peak and non-peak hours
- D. Weekday and weekend hours

**Answer: A**

Explanation:

Tag restrictions allow administrators to apply different power management schedules to subsets of machines within the same Delivery Group. By tagging certain Server OS VDAs, the administrator can configure weekly restarts for all machines and daily restarts for only the tagged subset during non-peak hours.

#### NEW QUESTION # 16

When the Local Host Cache (LHC) is enabled, during a Site database outage \_\_\_\_\_ will reference \_\_\_\_\_ to broker new sessions. (Choose the correct option to complete the sentence.)

- A. the principal Delivery Controller; its local database
- B. the principal Delivery Controller; its local XML file
- C. all Delivery Controllers; their local database
- D. all Delivery Controllers; their local XML file

#### Answer: C

Explanation:

With Local Host Cache (LHC) enabled, each Delivery Controller maintains a synchronized local copy of the Site database. During a database outage, all Delivery Controllers reference their local database to continue brokering new sessions, ensuring high availability.

#### NEW QUESTION # 17

A Citrix Administrator has enabled an HDX Session printers policy within a Citrix Virtual Apps and Desktops Site. The administrator added a printer to a print server and assigned the printer to all users through a session printer policy.

In addition, several local client printers are auto-created within HDX sessions. No other printing policies are configured. How will print jobs be routed when users send print jobs to a printer managed by the print server?

- A. Over the HDX virtual channel, through the endpoint, and then to the print server
- B. Over the HDX virtual channel to the specified printer attached to the print server
- C. Directly to the network print server and then to the specified printer
- D. Directly from the session Virtual Delivery Agent (VDA) machine to the printer

#### Answer:

Explanation:

When using session printers from a print server, print jobs are routed directly from the VDA to the network print server, which then forwards them to the physical printer. The HDX virtual channel is only used for client printers, not for print server-based session printers.
