問題 #91

Based on the system state transition diagram of an ATM system shown below, using the state transition test technique which of the following is an example of a test case required to achieve 1-switch coverage?

- A. 1 st try -> 2nd try -> 3rd try
- B. 1 st try -> 2nd try -> 3rd try -> access to acct
- C. 1 st try -> 2nd try
- D. 1st try -> 2nd try -> eat card

答案：D

解題說明：

The test case C is an example of a test case required to achieve 1-switch coverage, using the state transition test technique. A 1-switch test case is a test case that covers two states and the transition between them. To achieve 100% 1-switch coverage, all transitions between states must be covered by at least one test case. The test case C covers the transition from the state 1st try to the state 2nd try, and the transition from the state 2nd try to the state eat card. 問題 #92

Consider the following decision table:

	1	2	3	4	5	6	7	8
C1	1	1	1	1	0	0	0	0
C2	1	1	0	0	1	1	0	0
C3	1	0	1	0	1	0	1	0
A1	X	X						
A2	X							

This decision table has been created to test the following specification: Persons that study at a university (C1) and have parents whose total annual income is less than € 30.000 (C2), receive a scholarship. In addition to these qualifications, if they also live away from home (C3), they receive an addition to their scholarship (A2). How many cases are left when this decision table is collapsed?

- A. 0
- B. 1
- C. 2
- D. 3

答案：C

解題說明：

Two cases are left when this decision table is collapsed. A decision table is a technique that shows the combinations of conditions and actions for a given scenario. A decision table that is collapsed eliminates the combinations that are invalid or impossible, such as having a scholarship without meeting the qualifications.

The two valid cases for this scenario are:

- * C1 = Y, C2 = Y, C3 = Y, A1 = Y, A2 = Y
- * C1 = Y, C2 = Y, C3 = N, A1 = Y, A2 = N

問題 #93

REQ1 a sun cancer warning system shall produce a daily score sheet based on the number of hours expose to the sun and the intensity of sun radiation.

REQ2 The number of hours exposed to the sun shall be categorized in A (below 2), B (2 to 4 hours) or C (more than 4 hours)

REQ3 The intensity of sun radiation shall be labelled as low, medium, high, or extreme.

Based on the requirements stated above a Test Analyst has defined the following three test cases:

How many test conditions to be identified from requirements REQ2 and REQ3, are NOT covered by the three test cases:

	Hour exposed to the sun	Sun intensity
TC 1	1.5	Low
TC 2	6.0	Medium
TC 3	1.0	low

- A. 0
- **B. 1**
- C. 2
- D. 3

答案: B

解題說明:

Four test conditions to be identified from requirements REQ2 and REQ3 are not covered by the three test cases. A test condition is an item or event of a component or system that could be verified by one or more test cases, such as a function, transaction, feature, quality attribute, or structural element. The test conditions to be identified from REQ2 and REQ3 are:

- * Number of hours exposed to the sun = A
- * Number of hours exposed to the sun = B
- * Number of hours exposed to the sun = C
- * Intensity of sun radiation = low
- * Intensity of sun radiation = medium
- * Intensity of sun radiation = high
- * Intensity of sun radiation = extreme

The test conditions that are not covered by the three test cases are:

- * Number of hours exposed to the sun = A
- * Intensity of sun radiation = low
- * Intensity of sun radiation = high
- * Intensity of sun radiation = extreme

問題 #94

When preparing test cases for an interoperability test, not all interactions may be clearly specified in the requirements documents.

Which type of document is typically also used by a Test Analyst as the test basis for interoperability testing?

- A. Component specifications
- B. Functional specifications
- C. User stories
- **D. System architecture document**

答案: D

解題說明:

The type of document that is typically used by a Test Analyst as the test basis for interoperability testing is the system architecture document. The system architecture document describes the structure and behavior of the system under test and its components, as well as their interactions and dependencies with other systems or components. This document can provide information about the interfaces and protocols that need to be tested for interoperability. 問題 #95

You work for a company that is a pioneer in smart energy technology. The company is planning to launch a new application for smartphones and tablets that will allow customers to view their energy readings remotely. The application must support customers with disabilities.

The application is being delivered using a hybrid mix of agile and V-model methodologies over three iterations:

- * Iteration 1: Development of the application for the iOS operating system
- * Iteration 2: Enhancement to support the Android operating system
- * Iteration 3: Enhancement to provide daily budget usage

You have been asked to review the risk register and design test conditions for the highest priority product risks that fall into your area of responsibility, relating to Iterations 1 and 2 only.

Risk ID	Description	Impact	Likelihood
R01	The application may prove difficult to use for those who are visually impaired	Medium	Low
R02	The daily energy budget usage may not be accurately calculated from seasonal historic data	High	High
R03	The application may be incorrectly installed on some iOS and Android devices and operating systems	High	Medium
R04	Insufficient time to test the application on all supported iOS and Android devices and OS	Medium	Medium

SELECT ONE OPTION

- A. R04
- **B. R03**
- C. R01
- D. R02

答案： B

解題說明：

Comprehensive and Detailed in Depth Explanation:

Since the question focuses on Iterations 1 and 2 only, we must prioritize risks related to these iterations.

- * R01(Accessibility): Low likelihood, medium impact - not a priority for initial iterations.
 - * R02(Budget calculation): Related to Iteration 3, so it is not relevant to the current test design.
 - * R03(Installation issues on iOS and Android): High impact, medium likelihood - relevant for both Iterations 1 and 2. Installation is crucial for ensuring the application works on both platforms.
 - * R04(Insufficient testing time): Medium impact and likelihood - important, but R03 is more critical.
- Hence, the highest priority risk to address first is R03 (The application may be incorrectly installed on some iOS and Android devices).
