C-ACDET-2506 Study Guide & C-ACDET-2506 Free Download pdf & C-ACDET-2506 Latest Pdf Vce

Having a good command of professional knowledge in this line, they represent the highest level of this C-ACDET-2506 exam and we hired them to offer help for you. They made high-end C-ACDET-2506 preparation exam with one-year supplementary updates one year long. If you want to have free exam questions or lower-priced practice materials, our website provide related materials for you. So their profession makes our C-ACDET-2506 Exam Prep trustworthy.

SAP C-ACDET-2506 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> Project Overview, Roles and Responsibilities: This section of the exam measures the skills of an SAP Cloud Consultant and covers the fundamental understanding of SAP Activate methodology within the context of a cloud implementation project. Candidates are expected to be familiar with the project lifecycle, including phases such as Prepare, Explore, Realize, Deploy, and Run. This part also focuses on identifying key roles and responsibilities within a cloud project team, ensuring clarity in collaboration between consultants, clients, and SAP. It checks whether the consultant understands governance, stakeholder management, and the high-level structure of cloud deployment using SAP best practices.
Topic 2	<ul style="list-style-type: none"> Field Configuration: This domain evaluates the knowledge of an SAP Deployment Specialist and focuses on customizing and configuring business fields in the SAP system according to client-specific needs. This includes adjusting system settings for master data, transaction data, and other essential field-level controls to support business processes effectively. The section tests the candidate's ability to use configuration tools, apply SAP standard templates, and ensure that the field configurations align with the desired operational workflows of the business. It also touches upon validation, testing, and documenting the configuration changes made during the implementation.
Topic 3	<ul style="list-style-type: none"> Deploy and Migration: This part of the exam assesses the expertise of an SAP Deployment Specialist and focuses on the final deployment of the configured solution and the data migration process. Candidates should demonstrate a solid grasp of how to move configurations from a testing environment into production while minimizing disruption. It also includes knowledge of tools and strategies used for data extraction.

SAP Certified Associate - Configuring SAP Ariba Strategic Sourcing Suite Sample Questions (Q59-Q64):

NEW QUESTION # 59

Which of the following can be used to define relation types and establish a custom relationship? (Select 2 correct answers)

- A. A custom Form Template such as vrealm_1936.formDoc_18697.LessonsLearned
- B. A custom Flex Master Data Template such as vrealm_1936.fmd_58984.Hospital
- C. A standard class such as ariba.basic.core.CommodityCode
- D. A custom Enumeration such as Contracts_Contract_Type

Answer: B,C

Explanation:

In SAP Ariba, relation types can be defined using custom Flex Master Data (FMD) templates and standard classes such as ariba.basic.core.CommodityCode. These define valid relationships between fields, allowing dependent picklists or filtering logic in forms. Custom enumerations are static lists and are not used to establish dynamic relations, and custom form templates are for form layouts and do not define data relationships.

NEW QUESTION # 60

What actions can typically be performed on existing fields? Note: There are 3 correct answers to this question.

- A. Change the help tip
- B. Change the internal name
- C. Change the field type
- D. Make the field mandatory
- E. Add a Visibility, Editability, or Validity Condition

Answer: A,D,E

NEW QUESTION # 61

The customer wants to have a field to hold Contract Storage Locations and the address. Those locations are loaded from an

external system, and the user should be able to search for storage locations. What should be used to hold the valid storage locations?

- A. You should load a new Enumeration Type and call it Storage Location and load the location addresses. Create a new field of type Enumeration with a custom filter to only Enumerations of type show Storage Locations.
- B. Create a new field of type Date, where each date entry is tied to a unique Storage Location and its corresponding address, allowing users to select locations based on historical data entries.
- C. Create a new field of type Text, with a custom Validation where the available Storage Locations are listed.
- **D. You should create a new Flex Master Data (FMD) Template with appropriate attributes and call it Storage Location. Once the template is published and sample data loaded, you can create a custom field and select the type Storage Location.**

Answer: D

Explanation:

For managing searchable lists of storage locations with associated attributes like addresses, the best SAP Ariba practice is to use a Flex Master Data (FMD) Template. This allows you to model the storage locations and related information dynamically. After creating the FMD template and loading the data (e.g., from CSV imports), you can create a custom field referencing the FMD type. This approach enables users to search, filter, and select valid locations efficiently, while also allowing the underlying data to be maintained separately and updated independently of the configuration.

Using text fields with validation or enumerations is insufficient for large or dynamic datasets and doesn't scale well. Date fields are unrelated to this scenario.

FMD provides a scalable and flexible solution for complex master data requirements like storage locations.

NEW QUESTION # 62

You want to apply a preset filter to a custom field so that it only shows valid values based on the value of another field. What do you use to apply predefined filter criteria for a field?

- A. Enable field property "Enable for Template Field Setter" in the Advanced tab
- **B. Populate the "Relation Name" and "NameTableConstraintFieldPath" in the Advanced tab**
- C. Load Relation types and Relation entries
- D. Define a Visibility Condition in the Conditions tab
- E. Enable field property "Use relationship chooser" in the Advanced tab

Answer: B

Explanation:

To filter a custom field's available values based on another field's value in SAP Ariba, you populate the "Relation Name" and "NameTableConstraintFieldPath" properties in the field's Advanced tab. This configuration links the field to a predefined relation type and specifies the constraint field used for filtering.

Simply loading relation types (B) is a prerequisite but does not configure filtering on the field itself. Visibility conditions (C) control whether a field is shown, not the filtering of its values. Enabling "Use relationship chooser" (D) is necessary but insufficient alone without defining the relation and constraint field. The "Enable for Template Field Setter" (E) option is unrelated to filtering.

This filtering enables dynamic picklists where options depend on another field's selection, improving data accuracy and user experience.

NEW QUESTION # 63

Which of the following is NOT mentioned as a configuration type migrated by the Intelligent Configuration Manager?

- A. Template - project templates such as Contract templates
- B. AMLExtension - AML customizations such as custom fields
- **C. SupplierContact - contacts for the suppliers**
- D. DynamicForm - custom form templates (dForms)

Answer: C

Explanation:

The Intelligent Configuration Manager (ICM) migrates configuration types such as DynamicForms (dForms), AML Extensions (custom fields and enumerations), and Templates (contract or project templates). However, SupplierContact data, which is master or transactional data, is not migrated through ICM because ICM focuses on configuration migration, not operational or transactional

data. Supplier contact information is managed separately and must be migrated using appropriate master data processes.

NEW QUESTION # 64

.....

Our to-the-point and trustworthy SAP C-ACDET-2506 Exam Questions in three formats for the SAP C-ACDET-2506 certification exam will surely assist you to qualify for SAP Certified Associate - Configuring SAP Ariba Strategic Sourcing Suite certification.
