

完美的Oracle 1Z0-1127-25最新題庫是行業領先材料&實用的1Z0-1127-25: Oracle Cloud Infrastructure 2025 Generative AI Professional

P.S. Testpdf在Google Drive上分享了免費的、最新的1Z0-1127-25考試題庫：https://drive.google.com/open?id=1Seuk_saMKRM9CmTRRgimpPUtNPfkPRE9

您是否感興趣想通過1Z0-1127-25考試，然後開始您的高薪工作？Testpdf擁有最新研發的題庫問題及答案，可以幫助數百萬的考生通過1Z0-1127-25考試並獲得認證。我們提供給您最高品質的Oracle 1Z0-1127-25題庫問題及答案，覆蓋面廣，可以幫助考生進行有效的考前學習。所有購買1Z0-1127-25題庫的客戶都將得到一年的免費升級服務，這讓您擁有充裕的時間來完成考試。我們會100%為您提供方便以及保障，請記住能讓您100%通過考試的題庫就是我們的Oracle 1Z0-1127-25考古題。

Oracle 1Z0-1127-25 考試大綱：

主題	簡介
主題 1	Implement RAG Using OCI Generative AI Service: This section tests the knowledge of Knowledge Engineers and Database Specialists in implementing Retrieval-Augmented Generation (RAG) workflows using OCI Generative AI services. It covers integrating LangChain with Oracle Database 23ai, document processing techniques like chunking and embedding, storing indexed chunks in Oracle Database 23ai, performing similarity searches, and generating responses using OCI Generative AI.
主題 2	Fundamentals of Large Language Models (LLMs): This section of the exam measures the skills of AI Engineers and Data Scientists in understanding the core principles of large language models. It covers LLM architectures, including transformer-based models, and explains how to design and use prompts effectively. The section also focuses on fine-tuning LLMs for specific tasks and introduces concepts related to code models, multi-modal capabilities, and language agents.

主題 3	Using OCI Generative AI RAG Agents Service: This domain measures the skills of Conversational AI Developers and AI Application Architects in creating and managing RAG agents using OCI Generative AI services. It includes building knowledge bases, deploying agents as chatbots, and invoking deployed RAG agents for interactive use cases. The focus is on leveraging generative AI to create intelligent conversational systems.
主題 4	Using OCI Generative AI Service: This section evaluates the expertise of Cloud AI Specialists and Solution Architects in utilizing Oracle Cloud Infrastructure (OCI) Generative AI services. It includes understanding pre-trained foundational models for chat and embedding, creating dedicated AI clusters for fine-tuning and inference, and deploying model endpoints for real-time inference. The section also explores OCI's security architecture for generative AI and emphasizes responsible AI practices.

1Z0-1127-25考題套裝，1Z0-1127-25熱門證照

想更好更快的通過Oracle的1Z0-1127-25考試嗎？快快選擇我們Testpdf吧！它可以迅速的完成你的夢想。我們Testpdf是一個為多種IT認證考試的人，提供準確的考試材料的網站，我們Testpdf是一個可以為很多IT人士提升自己的職業藍圖，我們的力量會讓你難以置信。你可以先嘗試我們Testpdf為你們提供的免費下載關於Oracle的1Z0-1127-25考試的部分考題及答案，檢測我們的可靠性。

最新的 Oracle Cloud Infrastructure 1Z0-1127-25 免費考試真題 (Q57-Q62):

問題 #57

What is LCEL in the context of LangChain Chains?

- A. An older Python library for building Large Language Models
- B. A legacy method for creating chains in LangChain
- C. A programming language used to write documentation for LangChain
- D. A declarative way to compose chains together using LangChain Expression Language

答案：D

解題說明：

Comprehensive and Detailed In-Depth Explanation=

LCEL (LangChain Expression Language) is a declarative syntax in LangChain for composing chains-sequences of operations involving LLMs, tools, and memory. It simplifies chain creation with a readable, modular approach, making Option C correct. Option A is false, as LCEL isn't for documentation. Option B is incorrect, as LCEL is current, not legacy. Option D is wrong, as LCEL is part of LangChain, not a standalone LLM library. LCEL enhances flexibility in application design.

OCI 2025 Generative AI documentation likely mentions LCEL under LangChain integration or chain composition.

問題 #58

How does the utilization of T-Few transformer layers contribute to the efficiency of the fine-tuning process?

- A. By incorporating additional layers to the base model
- B. By restricting updates to only a specific group of transformer layers
- C. By excluding transformer layers from the fine-tuning process entirely
- D. By allowing updates across all layers of the model

答案：B

解題說明：

Comprehensive and Detailed In-Depth Explanation=

T-Few fine-tuning enhances efficiency by updating only a small subset of transformer layers or parameters (e.g., via adapters), reducing computational load-Option D is correct. Option A (adding layers) increases complexity, not efficiency. Option B (all layers) describes Vanilla fine-tuning. Option C (excluding layers) is false-T-Few updates, not excludes. This selective approach optimizes resource use.

OCI 2025 Generative AI documentation likely details T-Few under PEFT methods.

問題 #59

Which technique involves prompting the Large Language Model (LLM) to emit intermediate reasoning steps as part of its response?

- A. In-Context Learning
- **B. Chain-of-Thought**
- C. Step-Back Prompting
- D. Least-to-Most Prompting

答案: B

解題說明:

Comprehensive and Detailed In-Depth Explanation=

Chain-of-Thought (CoT) prompting explicitly instructs an LLM to provide intermediate reasoning steps, enhancing complex task performance-Option B is correct. Option A (Step-Back) reframes problems, not emits steps. Option C (Least-to-Most) breaks tasks into subtasks, not necessarily showing reasoning. Option D (In-Context Learning) uses examples, not reasoning steps. CoT improves transparency and accuracy.

OCI 2025 Generative AI documentation likely covers CoT under advanced prompting techniques.

問題 #60

An LLM emits intermediate reasoning steps as part of its responses. Which of the following techniques is being utilized?

- **A. Chain-of-Thought**
- B. Step-Back Prompting
- C. Least-to-Most Prompting
- D. In-context Learning

答案: A

解題說明:

Comprehensive and Detailed In-Depth Explanation=

Chain-of-Thought (CoT) prompting encourages an LLM to emit intermediate reasoning steps before providing a final answer, improving performance on complex tasks by mimicking human reasoning. This matches the scenario, making Option D correct. Option A (In-context Learning) involves learning from examples in the prompt, not necessarily reasoning steps. Option B (Step-Back Prompting) involves reframing the problem, not emitting steps. Option C (Least-to-Most Prompting) breaks tasks into subtasks but doesn't focus on intermediate reasoning explicitly. CoT is widely recognized for reasoning tasks.

OCI 2025 Generative AI documentation likely covers Chain-of-Thought under advanced prompting techniques.

問題 #61

You create a fine-tuning dedicated AI cluster to customize a foundational model with your custom training data. How many unit hours are required for fine-tuning if the cluster is active for 10 days?

- **A. 240 unit hours**
- B. 480 unit hours
- C. 20 unit hours
- D. 744 unit hours

答案: A

解題說明:

Comprehensive and Detailed In-Depth Explanation=

In OCI, a dedicated AI cluster's usage is typically measured in unit hours, where 1 unit hour = 1 hour of cluster activity. For 10 days, assuming 24 hours per day, the calculation is: 10 days × 24 hours/day = 240 hours. Thus, Option B (240 unit hours) is correct. Option A (480) might assume multiple clusters or higher rates, but the question specifies one cluster. Option C (744) approximates a month (31 days), not 10 days. Option D (20) is arbitrarily low.

OCI 2025 Generative AI documentation likely specifies unit hour calculations under Dedicated AI Cluster pricing.

問題 #62

.....

選擇最適合的Oracle 1Z0-1127-25題庫學習資料，並來獲得認證，它能加速您在信息技術行業里快速成長，也是加薪升遷的成功選擇。在取得您第一個1Z0-1127-25認證后，您還可以參加其它的IT認證考試，Testpdf的考古題能幫助獲得更多的成功。我們擁有超多十年的IT認證經驗，在我們的支援下，您可以順利的Oracle 1Z0-1127-25考試。我們還承諾，對於使用我們1Z0-1127-25考古題失敗的考生，將提供100%無條件退款。
