**100% Pass Quiz Juniper Marvelous JN0-105 - Valid Junos, Associate (JNCIA-Junos) Exam Materials**

Juniper guarantees that if you use the product, you will pass the JN0-105 exam on your first try. Its primary goal is to save students time and money, not just conduct a business transaction. Candidates can take advantage of the free trials to evaluate the quality and standard of the JN0-105 Dumps before making a purchase. With the right Juniper JN0-105 study material and support team passing the examination at first attempt is an achievable goal.

## Juniper Junos, Associate (JNCIA-Junos) Sample Questions (Q75-Q80):

### NEW QUESTION # 75

What are two advantages of using the Junos OS? (Choose two.)

- A. It pushes your configuration changes "live" immediately.
- B. It enables you to roll back to a previous configuration.
- C. It supports up to a maximum of two previous configurations.
- D. It is modular.

**Answer: B,D**

Explanation:

One of the key advantages of Junos OS is its ability to roll back to previous configurations. This feature allows administrators to revert to an earlier configuration state, which is invaluable for quickly recovering from configuration errors or undesired changes. Junos OS maintains an archive of previous configurations, enabling easy rollback to any saved state. Another significant advantage of Junos OS is its modular design.

The operating system is structured so that different processes and services run in separate protected memory spaces, enhancing the stability and reliability of the system. If one process fails, it does not affect the others, thereby minimizing the risk of system-wide failures.

### NEW QUESTION # 76

Which two actions happen when multiple users issue the configure exclusive command to enter configuration mode on a Junos device? (Choose two.)

- A. The candidate configuration is unlocked.
- B. Other users cannot enter configuration mode.
- C. Other users can enter configuration mode.
- D. The candidate configuration is locked.

**Answer: B,D**

Explanation:

In Junos OS, when a user issues the configure exclusive command, it locks the candidate configuration for that user, preventing other users from making concurrent configuration changes. This exclusive lock ensures that configuration changes are managed in a controlled manner, reducing the risk of conflicting changes. As a result, while one user is in exclusive configuration mode, other users are prevented from entering configuration mode until the lock is released, either by the user committing the changes or exiting configuration mode.

### NEW QUESTION # 77

How many rescue configuration files are supported on a Junos device?

- A. 0
- B. 1
- C. 2
- D. 3

**Answer: A**

Explanation:

Junos OS supports only 1 rescue configuration file on a device. This rescue configuration is a safeguard feature that allows network administrators to revert to a known good configuration in case of a configuration error or issue, ensuring network stability.

In Junos OS, each device supports only one rescue configuration file. The rescue configuration is a specific configuration that can be saved and later retrieved if needed. This is used as a fallback configuration that you know works and can be applied in case of an

emergency or if the current configuration has issues.

Reference:

"You can create a rescue configuration file by using the request system configuration rescue save operational mode command. Each Junos OS device can have only one rescue configuration file."

### NEW QUESTION # 78

Exhibit

[edit]

```
user@router1 set interfaces ge-0/1/2 unit 0 family inet address 172.16.101.1/24 [edit] user@router# commit check configuration check succeeds
```

[edit]

```
user@router#
```

You need to configure interface ge-0/1/2 with an IP address of 172.16.100.1/24. You have accidentally entered 172.16.101.1/24 as shown in the exhibit.

Which command should you issue to solve the problem?

- A. [edit] user@router# rollback 0
- B. (edit) user@router# rollback 1
- C. [edit] user@router# rollback rescue
- D. [edit] user@router# rollback 2

**Answer: B**

Explanation:

If you've committed a configuration and then need to revert to the previous configuration, the rollback command is used. Since the incorrect IP address has not been committed, as indicated by the commit check command being successful, issuing rollback 1 will undo the changes made in the current session, which includes the accidental entry of the IP address.

### NEW QUESTION # 79

You configured your system authentication order using the set authentication-order tacplus radius password command.

Which statement is correct in this scenario?

- A. A rejection by TACACS+ will prevent a login and bypass the other two authentication methods.
- B. All authentication methods are used with the most restrictive permission set used.
- C. The password authentication will only be used if the TACACS+ and RADIUS servers fail to respond.
- D. The password authentication method is evaluated if the TACACS+ and RADIUS servers respond with a reject message.

**Answer: C**

Explanation:

In the scenario where the system authentication order is set to "tacplus radius password," the correct statement is (B). If the TACACS+ and RADIUS servers are unreachable or fail to respond, the system will fall back to using password authentication. This ensures that users can still authenticate using locally stored passwords if external authentication servers are unavailable.

### NEW QUESTION # 80

.....

Our JN0-105 exam materials are renowned for free renewal in the whole year. As you have experienced various kinds of JN0-105 exams, you must have realized that renewal is invaluable to JN0-105 study quiz, especially to such important exams. And there is no doubt that being acquainted with the latest trend of exams will, to a considerable extent, act as a driving force for you to pass the JN0-105 exams and realize your dream of living a totally different life.
