SAP Certified Associate - Data Analyst - SAP Analytics Cloud Sample Questions (Q23-Q28):

NEW QUESTION # 23

What can you use to organize dimensions into logical categories in a live model?

- A. Level-based hierarchy
- B. Value driver tree
- C. Groups
- D. Parent-child hierarchy**

Answer: D

Explanation:

In a live model within SAP Analytics Cloud, dimensions can be organized into logical categories using either level-based hierarchies or parent-child hierarchies. Level-based hierarchies are used when the relationships between items are defined by distinct levels, such as Geography might be divided into Country, State, and City levels. Parent-child hierarchies, on the other hand, are useful when the data's hierarchy is not strictly defined by levels but by a parent relationship where a child member is associated with a parent member, which is common in organizational structures or product categories.

- A. Use responsive pages
- B. Avoid tables with more than 500 rows and 60 columns**
- C. Avoid prompts
- D. Load widgets in the background**
- E. Use conditional formatting**

Answer: B,D,E

NEW QUESTION # 25

Your embedded dataset in SAP Analytics Cloud has columns for Country, Region, City, and Customer Name. You want to

aggregate measures for these columns as a single column. What can you do?

- A. Create a parent-child hierarchy in the dataset.
- B. Create a group that includes the dimensions.
- C. Convert the embedded dataset to a model.
- D. Create a level-based hierarchy in the dataset.

Answer: D

Explanation:

To aggregate measures for columns such as Country, Region, City, and Customer Name as a single column in an embedded dataset, creating a level-based hierarchy is the most effective approach. This type of hierarchy allows you to define a multi-level structure that represents the logical relationship between different geographical entities and customer names. By doing so, you can easily perform aggregations and analyze data at various levels of detail, from the broadest level (e.g., Country) down to the most specific one (e.g., Customer Name).

NEW QUESTION # 26

You input new data for a private version in a story. What must you do to ensure the new data is added to the model?

- A. Save
- B. Publish
- C. Nothing
- D. Send

Answer: B

Explanation:

When inputting new data for a private version in a story in SAP Analytics Cloud, it is necessary to "Publish" the data to ensure it is added to the model. Publishing the private version commits the changes to the underlying model, making the new data visible and accessible to other users according to their permissions. This step is crucial for ensuring that the updated data is incorporated into the shared model for further analysis and decision-making.
