Data-Architect First-grade Exam Questions Pdf - 100% Pass Quiz Salesforce Data-Architect

The computer is widely used in all phases of society. If you get a Salesforce certification you will have wide development for business, education, medicine and nearly all walks of life. Data-Architect test dumps materials play an important role if you are willing to get a certificate. If you can show your computer skills and talents, it will be your outstanding advantage over others. 2Pass4sure Valid Data-Architect Test Dumps materials may be your first step to success as an IT worker.

Salesforce Certified Data Architect Sample Questions (Q60-Q65):

NEW QUESTION # 60

UC is having issues using Informatica Cloud Louder to export +10MOrder records. Each Order record has 10 Order Line Items. What two steps can you take to help correct this? Choose two answers.

- A. Use PK Chunking
- B. Limit Batch to 10K records
- C. Export Bulk API in parallel mode
- D. Export in multiple batches

Answer: A,D

Explanation:

Exporting in multiple batches and using PK Chunking are two steps that can help correct the issues with exporting large volumes of Order records using Informatica Cloud Loader. Exporting in multiple batches can reduce the load on the system and avoid timeouts or errors. Using PK Chunking can split a large data set into smaller chunks based on the record IDs and enable parallel processing of each chunk.

NEW QUESTION # 61

UC is trying to switch from legacy CRM to salesforce and wants to keep legacy CRM and salesforce in place till all the functionality is deployed in salesforce. The want to keep data in synch b/w Salesforce, legacy CRM and SAP. What is the recommendation.

- A. Do not integrate legacy CRM to Salesforce, but integrate salesforce to SAP
- B. Suggest MDM solution and link MDM to salesforce and SAP
- C. Integrate SAP with Salesforce, SAP to legacy CRM but not legacy CRM to Salesforce
- D. Integrate legacy CRM to salesforce and keep data in synch till new functionality is in place

Answer: B,C

NEW QUESTION # 62

Universal Containers (UC) manages Vehicle and Service History in Salesforce. Vehicle (Vehicle__c) and Service History (Service-History__c) are both custom objects related through a lookup relationship.

Every week a batch synchronization process updates the Vehicle and Service History records in Salesforce. UC has two hours of migration window every week and is facing locking issues as part of the data migration process.

What should a data architect recommend to avoid locking issues without affecting performance of data migration?

- A. Use Bulk API parallel mode for data migration
- B. Use Bulk API serial mode for data migration
- C. Insert the order in another custom object and use Batch Apex to move the records to Service_Order__c object.
- D. Change the lookup configuration to "Clear the value of this field" when lookup record is deleted.

Answer: B

NEW QUESTION # 63

US has released a new disaster recovery (DR) policy that states that cloud solutions need a business continuity plan in place separate from the cloud providers built in data recovery solution.

Which solution should a data architect use to comply with the DR policy?

- A. Leverage a 3rd party tool that extract salesforce data/metadata and stores the information in an external protected system.
- B. Utilize an ETL tool to migrate data to an on-premise archive solution.
- C. Leverage salesforce weekly exports, and store data in Flat files on a protected system
- D. Write a custom batch job to extract data changes nightly, and store in an external protected system

Answer: A

Explanation:

The best solution to comply with the DR policy is to leverage a 3rd party tool that extract Salesforce data/metadata and stores the information in an external protected system. This solution can help create a backup of Salesforce data and metadata in case of a disaster or data loss event. It can also help restore data from the backup system to Salesforce if needed. There are various 3rd party tools available in the AppExchange or online that offer data backup and recovery services for Salesforce67. Leverage Salesforce weekly exports and store data in flat files on a protected system is not a good solution because it does not include metadata backup and it does not allow granular or automated data recovery. Utilize an ETL tool to migrate data to an on-premise archive solution is not a good solution because it does not include metadata backup and it may require complex data transformations and synchronizations. Write a custom batch job to extract data changes nightly and store in an external protected system is not a good solution because it does not include metadata backup and it may have performance or reliability issues.

NEW QUESTION # 64

UC has the following system:

Billing system

Customer support system

CRM system

US has been having trouble with business intelligence across the different systems. Recently US implemented a master data management (MDM) solution that will be the system of truth for the customer records.

Which MDM data element is needed to allow reporting across these systems?

- A. Phone number.
- B. Global unique customer number.
- C. Email address.
- D. Full name.

Answer: B

Explanation:

The correct answer is A, global unique customer number. A global unique customer number is a data element that can uniquely identify each customer across different systems. It can be used as a key to link customer records from different sources and enable reporting across these systems. Email address, phone number, and full name are not reliable or consistent identifiers for customers, as they can change over time or be shared by multiple customers.

NEW QUESTION # 65

.....

These Salesforce Data-Architect updated dumps are launched in the market after suggestions from experienced professionals. Therefore, this Salesforce Data-Architect exam study material is kept to the point and concise. The Salesforce Data-Architect practice material for Exams. Choice are essential for your successful learning. Often applicants for the exam run on a tight daily schedule before the final Salesforce Data-Architect Exam, so actual Salesforce Certified Data Architect exam questions are fruitful to prepare successfully on the first try.
