Microsoft MB-820 Latest Test Fee, MB-820 Technical Training

Are you planning to attempt the Microsoft Dynamics 365 Business Central Developer (MB-820) exam of the MB-820 certification? The first hurdle you face while preparing for the Microsoft Dynamics 365 Business Central Developer (MB-820) exam is not finding the trusted brand of accurate and updated MB-820 exam questions. If you don't want to face this issue then you are at the trusted ExamsReviews is offering actual and Latest MB-820 Exam Questions that ensure your success in the Microsoft Dynamics 365 Business Central Developer (MB-820) certification exam on your maiden attempt.

Microsoft MB-820 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">Develop by using AL objects: Building and extending tables and reports is discussed in this topic. It also explains Designing and creating an XMLport. Lastly, it discusses how to work with entitlement and permission set objects.
Topic 2	<ul style="list-style-type: none">Develop by using AL: How to Customize the UI experience and Use AL for business central extension is discussed here. It also delves into explaining the essential development standards.
Topic 3	<ul style="list-style-type: none">Work with development tools: Implementing semi-automated test processes and managing and assessing telemetry are its sub-topics.

Topic 4	<ul style="list-style-type: none"> Install, develop, and deploy for Business Central: It delves into the installation and configuration of a Business Central development environment. Moreover, it discusses creating, debugging, and deploying an extension in Business Central.
Topic 5	<ul style="list-style-type: none"> Describe Business Central: Describing the components and capabilities of Business Central, and describing the core solution and extensions approach for Business Central are focal points of this topic. It also explains the difference between Business Central Online and Business Central on-premises features.

Microsoft Dynamics 365 Business Central Developer Sample Questions (Q13-Q18):

NEW QUESTION # 13

A company uses Business Central. The company is generating a detailed custom report.

A user observes that the generated report dataset contains more Delivery Line records than expected for one specific Delivery Header.

You need to generate a report that contains the accurate number of records.

```

01 dataitem("Delivery Header"; "Delivery Header")
02
03     column(No.; "No.") { }
04     column(Customer_Name; "Customer Name") { }
05     dataitem("Delivery Line"; "Delivery Line")
06     {
07         column(Document_No.; "Document No.") { }
08         column(Delivery_Address; "Delivery Address") { }
09     }
10 }

```

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Property configuration statements		Yes	No
Statement			
Configure the DataItemTableView property of the Delivery Header data item.	<input type="radio"/>	<input type="radio"/>	
Configure the RequestFilterFields property of both data items.	<input type="radio"/>	<input type="radio"/>	
Configure the DataItemLink property of the Delivery Line table.	<input type="radio"/>	<input type="radio"/>	

Answer:

Explanation:

Property configuration statements

Statement	Yes	No
Configure the DataItemTableView property of the Delivery Header data item.	<input checked="" type="radio"/>	<input type="radio"/>
Configure the RequestFilterFields property of both data items.	<input checked="" type="radio"/>	<input type="radio"/>
Configure the DataItemLink property of the Delivery Line table.	<input type="radio"/>	<input type="radio"/>

Explanation:

The report generated by the company contains more Delivery Line records than expected for one specific Delivery Header. To address this, certain properties within the report's data items need to be configured correctly.

Property Configuration Statements:

* Configure the DataItemTableView property of the Delivery Header data item This property defines the view (filtering and sorting) for a data item in a report. If the DataItemTableView is not configured properly, it might pull in more records than expected.
 answer: Yes. By configuring this property, you can control which Delivery Header records are retrieved, preventing excess records.

* Configure the RequestFilterFields property of both data items This property allows the user to set fields to filter on the request page of the report. Configuring the filter fields can help users refine the records being retrieved for both Delivery Header and Delivery Line.
answer: Yes. By setting appropriate filters on both data items, users can control which records to include, which is critical in narrowing down the correct data.

* Configure the DataItemLink property of the Delivery Line table This property links two data items based on common fields. If not configured properly, more Delivery Line records than expected might be retrieved because the link between Delivery Header and Delivery Line might not be accurate.

answer: Yes. Configuring the DataItemLink ensures that only the Delivery Line records associated with the specific Delivery Header are retrieved, avoiding an excess of records.

Conclusion:

* DataItemTableView property of Delivery Header data item # Yes

* RequestFilterFields property of both data items # Yes

* DataItemLink property of Delivery Line table # Yes

Each configuration is necessary for generating the correct number of records in the report dataset.

NEW QUESTION # 14

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

A company creates a Business Central app and a table named MyTable to store records when sales orders are posted.

Users report the following issues:

- The users receive permission errors related to MyTable.
- Users are no longer able to post sales orders since installing the new app.
- The users cannot access the list page created in MyTable.

You need to resolve the user issues without creating new permission sets. You must use the principle of least privilege.
Solution: Assign a SUPER permission set.

Does the solution meet the goal?

- A. Yes
- B. No

Answer: B

Explanation:

Assigning a SUPER permission set to all users would indeed resolve the permission errors and access issues reported by the users, as it grants full permissions across all objects and data in Business Central. However, this approach contradicts the principle of least privilege, which advocates for providing only the minimum levels of access necessary for users to perform their jobs. The SUPER permission set would excessively elevate user privileges, potentially leading to security risks and unintended modifications to critical data. Therefore, while assigning the SUPER permission set might technically resolve the immediate issues, it does not meet the goal of adhering to the principle of least privilege and is not a recommended solution.

NEW QUESTION # 15

You are developing a test application to test the posting process of a sales order. You must provide the following implementation:

* Specify the value of post options (dialog: Ship, Invoice, Ship & Invoice) as Invoice.

* Perform calculations and values checking.

You need to complete the development of the test codeunit.

Which methods should you use? To answer, move the appropriate methods to the correct implementation. You may use each method once, more than once, or not at all. You may need to move the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

Methods

Handler Normal Test

Test codeunit implementations

Handler Normal Test

Implementation

Specify the value of the post options as Invoice.
Perform calculations and values checking.

Method

Handler Normal Test

Answer:

Explanation:

Methods		Test codeunit implementations	Implementation	Method
Handler	Normal		Specify the value of the post options as Invoice.	Test
Test			Perform calculations and values checking.	Handler

NEW QUESTION # 16

You are writing a procedure to block all inventory items with numbers that do not start with the letter S.

You need to complete the procedure.

How should you complete the code expressions? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

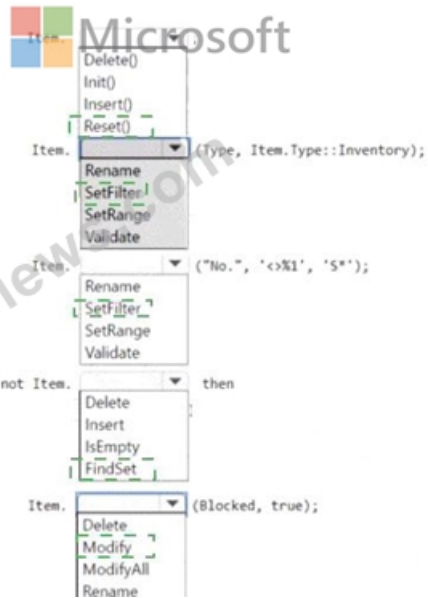

Procedure

```
Item. [ ] (Type, Item.Type::Inventory);
Item. [ ] ("No.", '<>%1', 'S*');
if not Item. [ ] then
Item. [ ] (Blocked, true);
```

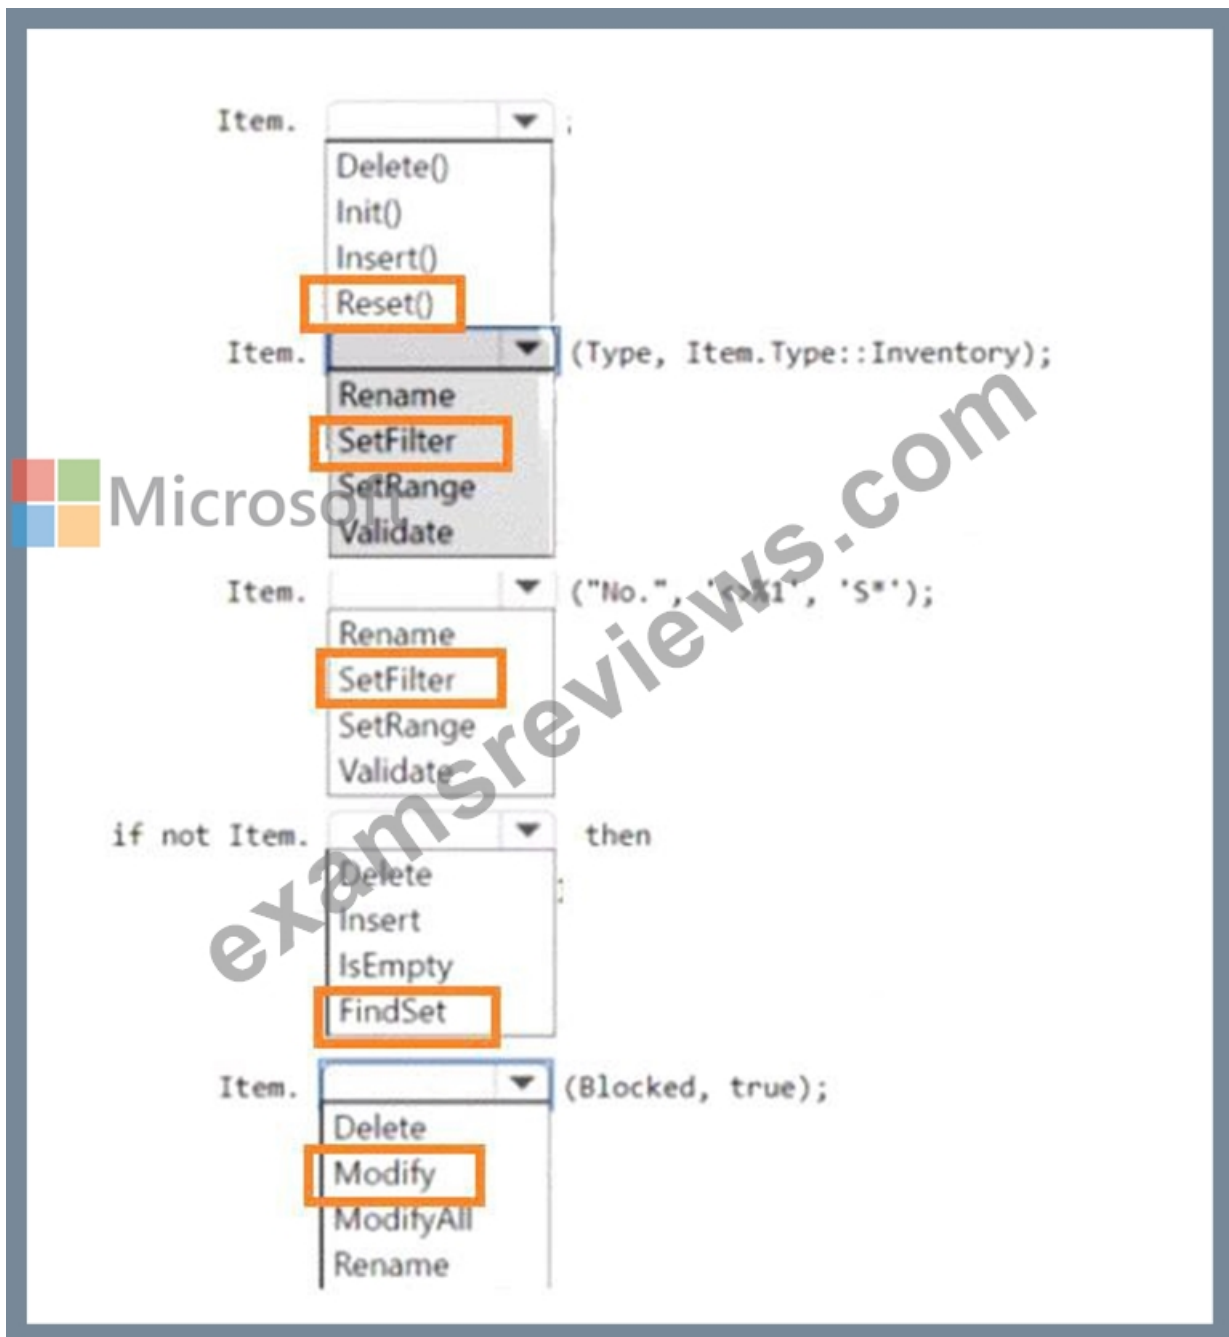

Microsoft

Answer:

Explanation:

Explanation:

```

procedure BlockNonSItems()
var
Item: Record Item;
begin
// Reset the Item record to clear any previous filters.
Item.Reset();
// Set the filter to exclude items that start with 'S'.
Item.SetFilter("No.", '<>%1*', 'S');
// Find each item that matches the filter.
if Item.FindSet() then
repeat
// Set the Blocked field to true to block the item.
Item.Blocked := true;
// Save the changes to the Item record.
Item.Modify();
until Item.Next() = 0; // Continue until no more items are found.
end;

```

NEW QUESTION # 17

A company plans to customize its per tenant extension reports. The company has the following requirements for the customization:

- * Child data items must not be displayed on the request page for some master detail reports.

- * Selecting key filter fields takes users too much time. The customization must decrease the amount of time to select the fields.

You need to optimize the report request page.

Which actions should you configure? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Report request page

Observation
Child data items of some master detail reports must not be displayed on the request page.

Decrease the amount of time to select filter fields.

Action

Set the PrintOnlyIfDetail property to true.
Set the UseRequestPage property to true.
Set the DataItemTableView sorting property.
Set the DataItemLinkReference property to the parent data item.

Set the SaveValues Property to true.
Specify the request page options.
Specify the RequestFilterFields property.
Specify the RequestFilterHeading property.

Answer:

Explanation:

Report request page

Observation

Child data items of some master detail reports must not be displayed on the request page.

Decrease the amount of time to select filter fields.

Action

Set the PrintOnlyIfDetail property to true.
Set the UseRequestPage property to true.
Set the DataItemTableView sorting property.
Set the DataItemLinkReference property to the parent data item.

Set the SaveValues Property to true.
Specify the request page options.
Specify the RequestFilterFields property.
Specify the RequestFilterHeading property.

NEW QUESTION # 18

.....

To write an effective MB-820 learning guide, one needs to have a good command of knowledge related with the exam. Our experts who devoted themselves to MB-820 practice materials over ten years constantly have been focused on proficiency of MB-820 Exam simulation with irreplaceable attributes. On some tough points, they use specific facts, definite figures to stress concretion. With our MB-820 study guide, you will know what will come in the real exam.
