

C_BCBTP_2502 Latest Exam Duration | Exam C_BCBTP_2502 Dump

You will not only get familiar with the SAP Certified Associate - Positioning SAP Business Technology Platform as part of SAP Business Suite (C_BCBTP_2502) exam environment but also enhance your time management skills which will be quite helpful in the final C_BCBTP_2502 certification exam. The C_BCBTP_2502 desktop practice test software will install on your Windows-based computer and laptop. Very easy to install and provide a user-friendly interface to C_BCBTP_2502 Exam candidates. Whereas the C_BCBTP_2502 web-based practice test software is concerned, it is a browser-based application that works with all the latest browsers.

SAP C_BCBTP_2502 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> • Illustrating CIO Transformation Delivered by SAP Business Suite: This section of the exam evaluates the skills of IT Transformation Managers and covers the role of SAP Business Suite in delivering value for CIO-led digital transformation. It highlights the significance of SAP’s portfolio in enterprise IT, introduces the capabilities of SAP BTP, and shows how it connects with end-to-end processes and industry-specific use cases. Candidates should also be able to identify the key products within SAP BTP and explain how cross-portfolio components integrate to deliver measurable value.
Topic 2	<ul style="list-style-type: none"> • Discovering SAP Business Technology Platform: This section of the exam measures the skills of SAP Solution Architects and focuses on positioning the SAP Business Technology Platform within the overall SAP Business Suite strategy. It includes understanding the platform’s role in enabling transformation, aligning with enterprise strategy, and supporting digital innovation. Candidates are expected to recognize the relevance of SAP BTP in modern business processes and how it integrates with other SAP offerings.

Exam C_BCBTP_2502 Dump, C_BCBTP_2502 Latest Exam Price

Successful people are those who are willing to make efforts. If you have never experienced the wind and rain, you will never see the rainbow. Giving is proportional to the reward. Now, our C_BCBTP_2502 study materials just need you spend less time, then your life will take place great changes. Maybe you think that our C_BCBTP_2502 study materials cannot make a difference. But you must know that if you do not have a try, your life will never be improved. It is useless that you speak boast yourself but never act. Please muster up all your courage. No one will laugh at a hardworking person. Our C_BCBTP_2502 Study Materials are your good study partner.

SAP Certified Associate - Positioning SAP Business Technology Platform as part of SAP Business Suite Sample Questions (Q12-Q17):

NEW QUESTION # 12

How does SAP BTP support predictive analytics in business decision-making?

Note: There are 3 correct answers to this question.

- A. By using SAP Data Intelligence for real-time insights.
- B. By leveraging AI and machine learning models.
- C. By requiring only manual data input.
- D. By restricting analytics to financial data.
- E. By automating data visualization.

Answer: A,B,E

Explanation:

SAP BTP provides a comprehensive ecosystem for predictive analytics, moving business decision-making from a reactive to a proactive state. This is achieved through three primary mechanisms. First, by leveraging AI and machine learning models (Option A), BTP services like SAP AI Core allow developers to train models on historical business data to predict future trends, such as customer churn or equipment failure.

Second, the platform automates data visualization (Option B) through SAP Analytics Cloud. This ensures that complex predictive insights are presented in an intuitive, dashboard-driven format that business leaders can easily interpret and act upon, rather than sifting through raw spreadsheets.

Third, the platform utilizes SAP Data Intelligence for real-time insights (Option D). This component orchestrates data from across diverse sources-both SAP and non-SAP-ensuring that the predictive models are fed with the most current and relevant information. By integrating these three pillars-intelligence (AI

/ML), visualization (Analytics), and orchestration (Data Intelligence)-SAP BTP transforms the SAP Business Suite into a forward-looking enterprise system. This allows organizations to anticipate market shifts, optimize their supply chains, and personalize customer interactions with a level of precision that was previously impossible, ultimately driving better business outcomes and long-term sustainability.

NEW QUESTION # 13

How does SAP BTP enable businesses to extend their existing SAP applications?

- A. By requiring all applications to be developed from scratch.
- B. By providing low-code/no-code development tools.
- C. By limiting customization to SAP standard functionalities.
- D. By restricting integration with external systems.

Answer: B

Explanation:

A fundamental principle of modernizing the SAP ecosystem is the concept of a "Clean Core." SAP BTP enables this by allowing organizations to build extensions "side-by-side" rather than within the core ERP code (classic "in-app" customization). By providing low-code/no-code development tools, such as SAP Build, the platform empowers both professional developers and "citizen developers" (business users with limited coding knowledge) to create applications that add specific business value without compromising the stability or upgradeability of the core SAP S/4HANA system.

These tools allow for the rapid creation of user interfaces using SAP Fiori elements and the automation of manual tasks through visual drag-and-drop interfaces. This approach is a stark contrast to traditional development, which often required extensive, custom ABAP coding that made system upgrades difficult and expensive. By positioning BTP as the extension layer, SAP ensures that businesses can remain agile and respond quickly to market changes. This flexibility is supported by a robust set of services that facilitate secure communication between the extension and the core system via APIs. Consequently, businesses can innovate at the edge while maintaining a stable, standardized digital core, which is the hallmark of the SAP Business Suite's evolution into the cloud.

era.

NEW QUESTION # 14

Which of the following SAP BTP components enhances enterprise data governance?

- A. SAP Concur
- B. SAP BusinessObjects BI
- C. SAP AppGyver
- **D. SAP Data Intelligence**

Answer: D

Explanation:

Data governance is the practice of ensuring that data is accurate, available, and secure across an organization.

SAP Data Intelligence is the primary component within SAP BTP that addresses this need. It provides advanced metadata management and data cataloging capabilities, which are the foundations of governance. A data catalog acts like a "search engine" for enterprise data, allowing users to understand the origin (lineage), quality, and sensitivity of the information they are working with. In a complex SAP Business Suite environment, data often moves through multiple stages and systems. SAP Data Intelligence tracks this "data lineage," showing how data was transformed as it moved from an ERP system to a reporting dashboard. This transparency is crucial for regulatory compliance (like GDPR) and for building trust in the data used for decision-making. If a financial report looks incorrect, governance tools allow IT to trace the data back to its source to find the error. By positioning Data Intelligence as the governance hub, SAP BTP ensures that the "Intelligent Enterprise" is built on a foundation of high-quality, trusted data. This is a significant differentiator from tools like SAP BusinessObjects (which focuses on reporting) or SAP Concur (which focuses on expenses), as Data Intelligence provides the underlying control layer for the entire data ecosystem.

NEW QUESTION # 15

Which SAP BTP services support AI-driven automation? (Choose two).

- A. SAP Concur
- B. SAP Business Network
- **C. SAP AI Core**
- **D. SAP Business Process Intelligence**

Answer: C,D

Explanation:

AI-driven automation on SAP BTP is achieved through a combination of foundational infrastructure and process analysis tools. SAP AI Core is a key service that provides a dedicated runtime for AI workloads. It allows developers to manage the entire lifecycle of machine learning models—from training to deployment— at scale. It is designed to handle large datasets and complex computations while ensuring that AI models are transparent and compliant with enterprise standards. By using SAP AI Core, businesses can embed predictive capabilities directly into their business logic.

Complementing this is SAP Business Process Intelligence (part of the SAP Signavio suite). This service uses AI to "mine" data from existing business processes to identify inefficiencies, bottlenecks, and manual tasks that are prime candidates for automation. It provides the "sight" to see where automation is needed, while SAP AI Core provides the "brain" to execute intelligent decisions. Together, these services allow an organization to move beyond simple task automation toward intelligent process transformation. SAP Concur and SAP Business Network, while benefiting from these technologies, are SaaS applications rather than the underlying services that facilitate the creation and management of AI-driven automation workflows within the BTP ecosystem.

NEW QUESTION # 16

Which SAP BTP solution can be used to streamline handling of blocked sales orders?

- A. SAP Integration Suite
- B. SAP Analytics Cloud
- **C. SAP Build Process Automation**
- D. SAP Datasphere

Answer: C

Explanation:

Blocked sales orders often represent a significant bottleneck in the "Order-to-Cash" process, usually requiring manual intervention from credit managers or sales administrators. SAP Build Process Automation is the ideal BTP solution to streamline this task. It combines the capabilities of workflow management and Robotic Process Automation (RPA) to automate the evaluation and release (or escalation) of these orders based on predefined business rules and real-time data from SAP S/4HANA.

By positioning SAP Build Process Automation as the solution, businesses can implement "exception-based" management. Instead of a human reviewing every blocked order, the BTP service can automatically release orders that meet certain low-risk criteria or route high-value/high-risk blocks to the appropriate manager's mobile device for instant approval. This significantly reduces the "Day Sales Outstanding" (DSO) and improves customer satisfaction by accelerating fulfillment. This approach highlights the value of SAP BTP as an extension layer for the SAP Business Suite; it allows for the optimization of core ERP processes without the need for complex, custom ABAP development, maintaining a "clean core" while achieving high levels of operational efficiency.

NEW QUESTION # 17

.....

Are you planning to crack the SAP C_BCBTP_2502 certification test but don't know where to get updated and actual SAP C_BCBTP_2502 exam dumps to get success on the first try? If you are, then you are on the right platform. Getcertkey has come up with Real C_BCBTP_2502 Questions that are according to the current content of the C_BCBTP_2502 exam.
