### SAP Certified Associate - Managing SAP S/4HANA Cloud Public Edition Projects Sample Questions (Q74-Q79):

#### NEW QUESTION # 74

If a customer wants to develop their own custom application and integrate it with SAP S/4HANA Cloud Public Edition, what tools would you recommend to develop the app? Note: There are 2 correct answers to this question.

- A. SAP Cloud Portal Service
- B. SAP Build
- C. SAP Business Application Studio
- D. SAP HANA Cloud

**Answer: B,C**

Explanation:

Developing custom applications for integration with SAP S/4HANA Cloud Public Edition requires tools that support extensibility and development within the SAP ecosystem.

\* Option A: SAP HANA Cloud Incorrect. SAP HANA Cloud is a database service, not a development tool for building custom applications. While it may store data for applications, it is not used for app development.

\* Option B: SAP Cloud Portal Service Incorrect. SAP Cloud Portal Service is used for creating and managing portal sites, not for developing custom applications.

\* Option C: SAP Business Application Studio Correct. SAP Business Application Studio is a cloud- based development environment for building custom applications and extensions for SAP S/4HANA Cloud. It supports development using SAPUI5, Fiori elements, and other technologies, making it ideal for custom app development. SAP's documentation highlights its role in extensibility.

\* Option D: SAP Build Correct. SAP Build is a low-code/no-code platform that enables non-developers and developers to create custom applications and integrations. It is recommended for rapid application development and integration with SAP S/4HANA Cloud, as per SAP's extensibility guidelines.

:

SAP Business Application Studio Documentation: Describes its role in custom app development (<https://help.sap.com>).

SAP Build Overview: Highlights its use for low-code app development (<https://www.sap.com>).

SAP S/4HANA Cloud Extensibility Guide: Recommends SAP Business Application Studio and SAP Build for custom development.

#### NEW QUESTION # 75

How does identity and access management work in SAP S/4HANA Cloud Public Edition?

- A. Through departmental security tokens that are issued to organizational units rather than individual users
- B. Through an AI-driven security model that adjust permissions dynamically by analyzing user behavior patterns
- C. Through a matrix-based permission system where each user is assigned to specific organizational levels and functional areas
- D. Through predefined business roles and catalogs assigned to users

**Answer: D**

#### NEW QUESTION # 76

What are some purposes of using Business Driven Configuration Questionnaires (BDCQs) during the implementation of SAP

S/4HANA Cloud Public Edition? Note: There are 2 correct answers to this question.

- A. To ensure the appropriate level of business context for the Fit-to-Standard workshop
- B. To suggest new features in the SAP S/4HANA Cloud, Public Edition solution
- C. To reduce the need for customer involvement
- D. To gather configuration values and validate solution fit

**Answer: A,D**

#### NEW QUESTION # 77

In which workstream do you execute an organizational change impact analysis?

- A. Solution Adoption
- B. Project Management
- C. Analytics
- D. Application Design and Configuration

**Answer: A**

#### NEW QUESTION # 78

You are implementing SAP S/4HANA Cloud, public edition for your customer. How do you activate the pre-configuration?

- A. Via the Central Business Configuration System
- B. Via the SAP Business Technology Platform
- C. SAP Contact Center
- D. Via the SAP Cloud ALM

**Answer: A**

Explanation:

Activating pre-configuration in SAP S/4HANA Cloud Public Edition involves applying predefined settings, such as SAP Best Practices, to streamline the implementation process. This is managed through a specific configuration tool.

\* Option A: Via the SAP Cloud ALM Incorrect. SAP Cloud ALM is used for project and test management, not for activating pre-configuration. The SAP Cloud ALM Documentation states, "SAP Cloud ALM supports project management and testing, not the activation of pre-configuration, which is handled by configuration tools."

\* Option B: Via the SAP Business Technology Platform Incorrect. SAP BTP is for development and integration, not configuration activation. The SAP BTP Documentation notes, "SAP BTP supports custom extensions, not the activation of pre-configured settings for SAP S/4HANA Cloud."

\* Option C: SAP Contact Center Incorrect. The SAP Contact Center is for support and service, not configuration tasks. The SAP S/4HANA Cloud Study Guide clarifies, "The SAP Contact Center provides customer support, not configuration activation capabilities."

\* Option D: Via the Central Business Configuration System Correct. The Central Business Configuration (CBC) system is used to activate pre-configured settings, such as SAP Best Practices, for SAP S/4HANA Cloud Public Edition. The SAP Central Business Configuration Guide explains, "The Central Business Configuration system is used to activate pre-configuration, including SAP Best Practices, for SAP S/4HANA Cloud Public Edition, enabling rapid setup of the solution." Extract from Official Documentation:

\* SAP Central Business Configuration Guide (SAP Help Portal, <https://help.sap.com>): "In SAP S/4HANA Cloud Public Edition, the Central Business Configuration system is the tool for activating pre-configured settings, such as SAP Best Practices, to streamline the implementation process."

\* SAP S/4HANA Cloud Implementation Guide (SAP Community, <https://community.sap.com>): "Pre-configuration activation, including the application of SAP Best Practices, is performed via the Central Business Configuration system, ensuring a standardized and efficient setup." Additional Context:

The CBC system is a key component of SAP S/4HANA Cloud Public Edition's configuration process, allowing customers to activate pre-configured settings quickly, aligning with the cloud's standardized approach. This reduces implementation time and ensures consistency with SAP Best Practices.
