We do admire our experts' familiarity and dedication with the industry all these years. By their help, you can qualify yourself with 200-901 guide materials. Our experts pass onto the exam candidate their know-how of coping with the exam by our 200-901 Exam Braindumps. Exam candidates are susceptible to the influence of ads, so our experts' know-how is impressive to pass the 200-901 exam instead of making financial reward solely.

Preparation Phase

Cisco recommends that the specialists sitting for the 200-901 DEVASC test go through the Developing Applications and Automating Workflows using Cisco Core Platforms training course. It is designed to equip them with the skills required to implement the fundamental network applications with Cisco platforms as the base. It also focuses on teaching the examinees how to implement different automation workflows across collaboration, security, network, and computing infrastructure. The learners will gain experience in solving practical problems with the use of Cisco APIs and modern development tools. In addition, the students can find other resources on the Cisco site as well as other reputable websites.

Comprehension and Utilization of APIs: This module is dedicated to validating the competence of the specialists in:

- Construction of a Python script, which calls a REST API utilizing the requests library
- Description of general usage patterns affiliated with webhooks
- Explanation of general HTTP response codes that are affiliated with REST APIs
- Comparison of general API styles (RPC, REST, synchronous as well as asynchronous)

The DevNet Associate certification is ideal for individuals who are interested in building applications on Cisco platforms and working with Cisco technologies. 200-901 Exam validates the candidate's knowledge and understanding of software development and Cisco technologies, providing them with the skills and confidence needed to develop and deploy applications on Cisco platforms. DevNet Associate Exam certification is particularly valuable for software developers, network engineers, and IT professionals who want to enhance their skills and advance their careers in the field of networking and software development.

Exam 200-901 Bootcamp, 200-901 New Real Exam

A good brand is not a cheap product, but a brand that goes well beyond its users' expectations. The value of a brand is that the 200-901 study materials are more than just exam preparation tool -- it should be part of our lives, into our daily lives. Do this, therefore, our 200-901 Study Materials has become the industry well-known brands, but even so, we have never stopped the pace of progress, we have been constantly updated the 200-901 study materials.

Cisco DevNet Associate Exam Sample Questions (Q75-Q80):

NEW QUESTION # 75

How does requesting a synchronous API operation differ from requesting an asynchronous API operation?

- **A. clients can access the results immediately**
- B. clients receive responses with a task id for further processing
- C. clients poll for the status of the execution of operations
- D. clients subscribe to a webhook for operation results

Answer: A

Explanation:

Synchronous API Operations:

Immediate Response: In a synchronous operation, the client sends a request to the server and waits for an immediate response. The client cannot proceed until it receives this response.

Blocking Call: The call is considered blocking, meaning the client application is blocked from performing other tasks until the response is received.

Use Case: This is useful when the result of the operation is required immediately to continue the workflow.

Asynchronous API Operations:

Delayed Response: In an asynchronous operation, the client sends a request to the server and does not wait for an immediate response. Instead, it continues its processing and can check back later for the result.

Non-blocking Call: The call is non-blocking, allowing the client to perform other tasks while waiting for the server to complete the operation.

Polling and Webhooks: Clients may poll the server for status updates or subscribe to a webhook to be notified when the operation is complete.

Task ID: The server may provide a task ID in the response that can be used to check the status of the operation later.

NEW QUESTION # 76

What is a capability of the AXL API?

- A. It allows a meeting to be created with users that do not belong to same organization.
- B. It collects information about system, cluster, and database settings.
- C. It adds a user to a collaboration space to share information and files.
- **D. It executes SQL commands in Cisco Unified Communications Manager.**

Answer: D

Explanation:

The AXL (Administrative XML) API is a SOAP-based API used by Cisco Unified Communications Manager (CUCM) to allow third-party applications to perform administrative tasks. One of the key capabilities of the AXL API is that it allows users to execute SQL commands within CUCM. This capability can be used to query and modify the CUCM database, enabling tasks such as

retrieving information about users, devices, and configurations, or making updates to the CUCM system.

NEW QUESTION # 77

Refer to the exhibit.

□ What do all the calls shown in the sequence diagram have in common?

- A. All the calls depend on the catalog.
- B. All the calls are asynchronous.
- C. All the calls are optional.
- D. All the calls are synchronous.

Answer: A

NEW QUESTION # 78

What is the benefit of edge computing?

- A. It reduces network latency by moving processing closer to the data source.
- B. It simplifies security as devices and processing are brought closer together.
- C. It removes the need for centralized data processing.
- D. It reduces data velocity from devices or other data sources.

Answer: A
