

# Test SOA-C02 Study Guide - SOA-C02 Passing Score

BONUS!!! Download part of RealValidExam SOA-C02 dumps for free: [https://drive.google.com/open?id=1quESsT1ZlBSVhn4\\_U0qeq4AAgzys1i2d](https://drive.google.com/open?id=1quESsT1ZlBSVhn4_U0qeq4AAgzys1i2d)

Our system is high effective and competent. After the clients pay successfully for the SOA-C02 study materials the system will send the products to the clients by the mails. The clients click on the links in the mails and then they can use the SOA-C02 Study Materials immediately. Our system provides safe purchase procedures to the clients and we guarantee the system won't bring the virus to the clients' computers and the successful payment for our SOA-C02 study materials.

If you want to make your IT dream come true, you just need to choose the professional training materials. RealValidExam is a professional website to provide IT certification training materials. Our SOA-C02 exam training materials is the result of RealValidExam's experienced IT experts with constant exploration, practice and research for many years. After you purchase our SOA-C02 Dumps PDF training materials, we will provide one year free renewal service.

## Pass Guaranteed Amazon - SOA-C02 - Updated Test AWS Certified SysOps Administrator - Associate (SOA-C02) Study Guide

You can acquire a sense of the SOA-C02 software by downloading a free trial version before deciding whether to buy it. This Amazon SOA-C02 practice exam software lets you identify your strengths and shortcomings, allowing you to concentrate on those aspects of your AWS Certified SysOps Administrator - Associate (SOA-C02) (SOA-C02) test preparation that could use some work.

## Amazon AWS Certified SysOps Administrator - Associate (SOA-C02) Sample Questions (Q460-Q465):

### NEW QUESTION # 460

Users of a company's internal web application recently experienced application performance issues for a brief period. The application includes frontend web servers that run in an Amazon Elastic Kubernetes Service (Amazon EKS) cluster. The application also includes a backend Amazon Aurora PostgreSQL DB cluster that includes one DB instance.

A SysOps administrator determines that the source of the performance issues was high utilization of the DB cluster. The single writer instance experienced more than 90% utilization for 11 minutes. The cause of the high utilization was an automated report that is scheduled to run one time each week. What should the SysOps administrator do to ensure that users do not experience performance issues each week when the report runs?

- A. Increase the size of the DB instance. Monitor the performance during the next scheduled run of the report.
- B. Add a reader instance. Change the database connection string of the report application to use the newly created reader instance.
- C. Add another writer instance. Change the database connection string of the report application to use the newly created writer instance.
- D. Configure auto scaling for the DB cluster. Set the minimum capacity units, maximum capacity units, and target utilization.

**Answer: A**

Explanation:

Increasing DB Instance Size:

Increasing the instance size provides more CPU and memory resources, which can help handle higher loads.

Steps:

Go to the AWS Management Console.

Navigate to RDS and select the DB instance.

Modify the instance to increase its size.

Apply the changes during the next maintenance window or immediately if it is a critical issue.

Monitoring Performance:

After resizing, monitor the instance during the next report run to ensure that it handles the load effectively.

#### **NEW QUESTION # 461**

A compliance team requires all administrator passwords for Amazon RDS DB instances to be changed at least annually. Which solution meets this requirement in the MOST operationally efficient manner?

- A. Store the database credentials as a parameter in the RDS parameter group. Create a database trigger to rotate the password every 365 days.
- B. Store the database credentials in a private Amazon S3 bucket. Schedule an AWS Lambda function to generate a new set of credentials every 365 days.
- C. Store the database credentials in AWS Systems Manager Parameter Store as a secure string parameter. Configure automatic rotation for the parameter every 365 days.
- **D. Store the database credentials in AWS Secrets Manager. Configure automatic rotation for the secret every 365 days.**

**Answer: D**

Explanation:

AWS Secrets Manager allows you to store, manage, and automatically rotate database credentials. This service is designed to be used for such requirements efficiently.

\* Store Database Credentials in AWS Secrets Manager:

\* Open the AWS Secrets Manager console at AWS Secrets Manager Console.

\* Choose Store a new secret.

\* Select Credentials for RDS database and provide the database connection details and credentials.

\* Choose Next to configure the secret.

\* Configure Rotation:

\* Enable automatic rotation for the secret.

\* Set the rotation interval to 365 days.

\* Select or create a Lambda function that will be used to rotate the secret. AWS Secrets Manager provides a template for this function which can be customized if necessary.

\* Apply and Monitor:

\* Apply the changes and ensure that your application retrieves credentials from AWS Secrets Manager.

\* Monitor the rotation activity in Secrets Manager to ensure that the credentials are being rotated as expected.

\* Rotating Your AWS Secrets Manager Secrets

#### **NEW QUESTION # 462**

A company plans to migrate several of its high performance computing (HPC) virtual machines (VMs) to Amazon EC2 instances on AWS. A SysOps administrator must identify a placement group for this deployment. The strategy must minimize network latency and must maximize network throughput between the HPC VMs.

Which strategy should the SysOps administrator choose to meet these requirements?

- **A. Deploy the instances in a cluster placement group in one Availability Zone.**
- B. Deploy the instances in a partition placement group in two Availability Zones.
- C. Deploy the instances in a partition placement group in one Availability Zone.
- D. Deploy the instances in a spread placement group in two Availability Zones.

**Answer: A**

Explanation:

For high-performance computing (HPC) applications that require minimized network latency and maximized network throughput, the best strategy is to use a cluster placement group. Here's why:

Cluster Placement Group:

Instances in a cluster placement group are placed within a single Availability Zone, which allows them to communicate using high-bandwidth, low-latency connections.

This is ideal for HPC workloads that require high network throughput and low latency.

Reference:

High-Bandwidth, Low-Latency Networking:

Instances in a cluster placement group benefit from enhanced networking features, which significantly improve the communication speed between instances.

Operational Benefits:

By grouping instances in a single Availability Zone, network traffic remains local to the zone, reducing latency compared to inter-zone communication.

This setup also simplifies the architecture for performance-critical applications.

By deploying your HPC instances in a cluster placement group in one Availability Zone, you ensure that network latency is minimized and throughput is maximized, meeting the performance requirements of your HPC applications.

### NEW QUESTION # 463

A company has two VPC networks named VPC A and VPC B. The VPC A CIDR block is 10.0.0.0/16 and the VPC B CIDR block is 172.31.0.0/16. The company wants to establish a VPC peering connection named pcx-12345 between both VPCs.

Which rules should appear in the route table of VPC A after configuration? (Select TWO.)

- A. Destination: 10.0.0.0/16, Target: Local
- B. Destination: 172.31.0.0/16, Target: Local
- C. Destination: 10.0.0.0/16, Target: pcx-12345
- D. Destination: 172.31.0.0/16, Target: pcx-12345
- E. Destination: 10.0.0.0/16, Target: 172.31.0.0/16

**Answer: A,D**

Explanation:

<https://docs.aws.amazon.com/vpc/latest/peering/vpc-peering-routing.html> When establishing a VPC peering connection between two VPCs, you need to update the route tables of both VPCs to allow traffic to flow between them.

\* Route Table of VPC A (10.0.0.0/16):

\* Local Route: This route is automatically created to allow traffic within the VPC.

\* Destination: 10.0.0.0/16, Target: Local

\* Peering Connection Route: This route directs traffic destined for VPC B (172.31.0.0/16) through the VPC peering connection.

\* Destination: 172.31.0.0/16, Target: pcx-12345

\* Route Table of VPC B (172.31.0.0/16):

\* Local Route: This route is automatically created to allow traffic within the VPC.

\* Destination: 172.31.0.0/16, Target: Local

\* Peering Connection Route: This route directs traffic destined for VPC A (10.0.0.0/16) through the VPC peering connection.

\* Destination: 10.0.0.0/16, Target: pcx-12345

References:

\* VPC Peering Routing

### NEW QUESTION # 464

A SysOps administrator must ensure that a company's Amazon EC2 instances auto scale as expected. The SysOps administrator configures an Amazon EC2 Auto Scaling Lifecycle hook to send an event to Amazon EventBridge (Amazon CloudWatch Events), which then invokes an AWS Lambda function to configure the EC2 instances. When the configuration is complete, the Lambda function calls the complete Lifecycle-action event to put the EC2 instances into service. In testing, the SysOps administrator discovers that the Lambda function is not invoked when the EC2 instances auto scale.

What should the SysOps administrator do to resolve this issue?

- A. Update the Lambda function execution role so that it has permission to call the complete lifecycle-action event
- B. Add a permission to the Lambda function so that it can be invoked by the EventBridge (CloudWatch Events) rule.

- C. Change the lifecycle hook action to CONTINUE if the lifecycle hook experiences a failure or timeout.
- D. Configure a retry policy in the EventBridge (CloudWatch Events) rule to retry the Lambda function invocation upon failure.

**Answer: B**

Explanation:

If a Lambda function is not being invoked by an Amazon EventBridge (formerly CloudWatch Events) rule, the likely issue is a missing permission. The Lambda function needs permission to be invoked by the EventBridge rule.

Steps:

Add Permission to Lambda Function:

Open the AWS Lambda console.

Select your Lambda function.

Choose "Configuration" and then "Permissions".

Under the "Resource-based policy" section, add a policy that grants EventBridge permission to invoke your function.

Example policy:

```
{
  "Version": "2012-10-17",
  "Statement": [
    {
      "Effect": "Allow",
      "Principal": {
        "Service": "events.amazonaws.com"
      },
      "Action": "lambda:InvokeFunction",
      "Resource": "arn:aws:lambda:REGION:ACCOUNT_ID:function:FUNCTION_NAME",
      "Condition": {
        "ArnLike": {
          "AWS:SourceArn": "arn:aws:events:REGION:ACCOUNT_ID:rule/RULE_NAME"
        }
      }
    }
  ]
}
```

Verify the EventBridge Rule:

Open the Amazon EventBridge console.

Select the rule that targets your Lambda function.

Ensure that the rule is correctly configured to match events and the target is your Lambda function.

Reference:

Amazon EventBridge Rules

## NEW QUESTION # 465

.....

A free trial service is provided for all customers by SOA-C02 study materials, whose purpose is to allow customers to understand our products in depth before purchase. Many students often complain that they cannot purchase counseling materials suitable for themselves. A lot of that stuff was thrown away as soon as it came back. However, you will definitely not encounter such a problem when you purchase SOA-C02 Study Materials. All consumers who are interested in SOA-C02 study materials can download our free trial database at any time by visiting our platform.

**SOA-C02 Passing Score:** <https://www.realvalidexam.com/SOA-C02-real-exam-dumps.html>

Amazon Test SOA-C02 Study Guide Passing the exam needs rich knowledge and enough working experience, Amazon Test SOA-C02 Study Guide It is an undeniable fact, This SOA-C02 software runs only on Windows computers, Amazon Test SOA-C02 Study Guide You can set up limit-time exams practice, mark your performance like the real test so that you will have a good mood to face the real test and be good at time distribution, Simple and easy-to-understand words are used in the content of our AWS Certified SysOps Administrator - Associate (SOA-C02) SOA-C02 exam questions.

Text you can highlight is text that the search engines can index, SOA-C02 Increase the processor quota assigned to a process, Passing the exam needs rich knowledge and enough working experience.

It is an undeniable fact, This SOA-C02 software runs only on Windows computers, You can set up limit-time exams practice, mark your performance like the real test so that SOA-C02 Test Price you will have a good mood to face the real test and be good at time distribution.
