Quiz Perfect C-SEC-2405 - Exam SAP Certified Associate - Security Administrator Objectives Pdf

Most people now like to practice C-SEC-2405 study braindumps on computer or phone, but I believe there are nostalgic people like me who love paper books. The PDF version of our C-SEC-2405 actual exam supports printing. This PDF version also

supports mobile phone scanning, so that you can make full use of fragmented time whenever and wherever possible. And the PDF version of our C-SEC-2405 learning guide can let you free from the constraints of the network, so that you can do exercises whenever you want.

SAP Certified Associate - Security Administrator Sample Questions (Q34-Q39):

NEW QUESTION # 34
What is the correct configuration setting in table PRGN_CUST for user assignments when transporting roles within a Central User Administration scenario?

- A. USER_REL_IMPORT = YES
- B. SET_IMP_LOCK_USERS = NOO
- C. USER_REL_IMPORT = NO
- D. SET_IMP_LOCK_USERS = YES

Answer: C

Explanation:
* Context:When transporting roles in a Central User Administration (CUA) scenario, certain configurations in table PRGN_CUST affect user assignments.
* Solution Explanation:
* SettingUSER_REL_IMPORT = NOensures that user assignments are not transported along with roles, maintaining assignment control in the target system.
SAP Security References:
* SAP CUA Role Transport Documentation
* SAP PRGN_CUST Configuration Guide

NEW QUESTION # 35
In the administration console of the Cloud Identity Services, for which system type can you define both read and write transformations?

- A. Proxy systems
- B. Target systems
- C. Source systems

Answer: B

NEW QUESTION # 36
Which cloud-based SAP solution helps organizations control their data across various cloud platforms and on- premise data sources?

- A. SAP Identity Access Governance
- B. SAP Privacy Governance
- C. SAP Data Custodian
- D. SAP Information Steward

Answer: C

Explanation:
SAP Data Custodian is the cloud-based SAP solution designed to help organizations control their data across various cloud platforms and on-premise data sources. It provides a centralized framework for data governance, enabling organizations to monitor, manage, and secure data throughout its lifecycle, regardless of where it resides. SAP Data Custodian ensures compliance with data protection regulations by offering tools for data discovery, classification, and access control, making it ideal for hybrid environments. In contrast, SAP Identity Access Governance focuses on managing user access and permissions, SAP Information Steward is used for data quality and profiling, and SAP Privacy Governance addresses privacy compliance.
SAP Data Custodian's unique capability to unify data control across diverse platforms makes it the correct choice for comprehensive data management and security.

NEW QUESTION # 37
In SAP HANA Cloud, who has access to a database object?

- A. The owner and the SAP-owned users
- B. The user SYSTEM and the creator
- C. The creator and the schema owner
- D. The user DBADMIN and the group owner

Answer: C

Explanation:
In SAP HANA Cloud, access to a database object is granted to the creator and the schema owner. The creator, typically the user who created the object (e.g., a table or view), is automatically granted full privileges on that object, allowing them to manage and manipulate it. The schema owner, who owns the schema in which the object resides, also has access, as they have overarching control over all objects within their schema. This dual ownership model ensures that both the user responsible for creating the object and the schema's administrator can manage it, supporting flexible and secure database administration. The user DBADMIN, group owner, SAP-owned users, or SYSTEM user may have specific administrative privileges, but they are not automatically granted access to all database objects unless explicitly configured. This approach aligns with SAP HANA Cloud's security framework, ensuring that object access is tightly controlled and aligned with the principles of least privilege and ownership-based access management.

NEW QUESTION # 38
What does SAP Key Management Service (KMS) do to secure cryptographic keys? Note: There are 3 correct answers to this question.

- A. Conceal keys
- B. Rotate keys
- C. Generate keys
- D. Transmit keys
- E. Store keys

Answer: B,C,E

Explanation:
The SAP Key Management Service (KMS) provides robust mechanisms to secure cryptographic keys within SAP environments. It supports the generation of cryptographic keys, ensuring that keys are created with high entropy and adhere to security standards, which is critical for encryption and authentication processes. KMS also securely stores keys in a protected environment, safeguarding them against unauthorized access and ensuring availability for authorized applications. Additionally, KMS facilitates key rotation, allowing organizations to periodically update keys to mitigate risks associated with long-term key exposure, thereby enhancing security. While concealing or transmitting keys may be part of broader security practices, these are not primary functions of SAP KMS. Instead, KMS focuses on generating, storing, and rotating keys to maintain a secure cryptographic infrastructure, aligning with best practices for data protection and compliance in SAP systems.

NEW QUESTION # 39
......

As a market leader, our company is able to attract quality staffs on our C-SEC-2405 exam materials , it actively seeks out those who are energetic, persistent, and professional to various C-SEC-2405 certificate and good communicator.
