They found difficulty getting hands on ServiceNow CSA real exam questions as it is undoubtedly a tough task. Besides this, it is also hard to pass the CSA exam on the first attempt. Nervousness and fear of exam is also daunting for applicants. The actual CSA Questions being offered by PracticeMaterial will enable you to obtain the certification without any hassle.

ServiceNow CSA (ServiceNow Certified System Administrator) Certification Exam is a technical certification exam that is designed for individuals who want to demonstrate their proficiency in managing and configuring ServiceNow. ServiceNow Certified System Administrator certification is particularly useful for professionals who are responsible for managing the day-to-day operations of a ServiceNow instance, such as system administrators or ServiceNow developers. The CSA Certification Exam is one of the most popular ServiceNow certifications, and it is recognized as a valuable credential by employers and IT professionals around the world.

ServiceNow Certified System Administrator Sample Questions (Q118-Q123):

NEW QUESTION # 118
Which one of the following statements is true about Column Context Menus?

- A. It displays actions such as view form, view related task, and add relationship
- B. It displays actions such as creating quick reports, configuring the list, and exporting data
- C. It displays actions related to filtering options, assigning tags, and search
- D. It displays actions related to viewing and filtering the entire list

Answer: B

NEW QUESTION # 119
The Employee On-boarding team has asked for a way for managers to order computers, monitors, business Cards, and cell phones for new employees. How would you proceed to meet this requirement?

- A. Create Order Guide
- B. Create Record Producer
- C. Create Requested Item
- D. Create On-boarding Bot

Answer: A

Explanation:
An Order Guide in ServiceNow is used to group multiple catalog items together so that users can request all necessary items in one streamlined process.
Why an Order Guide is the Best Choice for This Scenario?
The Employee Onboarding team needs a way for managers to order multiple items (computers, monitors, business cards, cell phones) for new employees.
An Order Guide allows managers to request all necessary items in a single request, instead of ordering them one by one.
The guide can also use rules and conditions to determine which items should be included based on user input (e.g., different job roles might require different devices).
Why Other Answers Are Incorrect:
A . Create Record Producer - Record Producers are used to capture information and create records (e.g., Incidents, Requests) but do not group multiple catalog items together like an Order Guide does.
C . Create Requested Item - A Requested Item (sc_req_item) is created when a request is submitted, but it is not the starting point for fulfilling this requirement.
D . Create Onboarding Bot - No such feature exists in ServiceNow; onboarding is typically handled via Order Guides and HR Case Management.

NEW QUESTION # 120
Which of the following are a type of client scripts supported in ServiceNow? (Choose four.)

- A. onCellEdit
- B. onUpdate
- C. onLoad
- D. onEdit
- E. onSubmit
- F. onSave
- G. onChange

Answer: A,C,E,G

Explanation:
InServiceNow,Client Scriptsare used to execute JavaScript codeon the client-side (browser)to control form behavior, validate data, or enhance user interaction.

Types of Client Scripts in ServiceNow:There arefourtypes of Client Scripts supported in ServiceNow:
onLoad (Option D)
Runswhen a form loads.
Used to pre-fill fields, hide/show elements, or set default values.
Example: Automatically setting the "Priority" field toHighwhen a new incident is created.
onChange (Option F)
Runswhen a specific field value changes.
Used for dynamic form behavior, such as making fields mandatory based on another field's value.
Example: If "Category" is changed to "Hardware," then show the "Hardware Type" field.
onSubmit (Option A)
Runswhen the form is submitted.
Used for final validation before allowing submission.
Example: Preventing submission if a mandatory field is left empty.
onCellEdit (Option C)
Runswhen a cell value is edited inline in a list view.
Used to trigger immediate validation or updates without opening the full form.
Example: Displaying an alert when a user directly changes an incident's priority from a list view.
Why Are the Other Options Incorrect?B. onUpdate
No "onUpdate" client script type exists in ServiceNow.
"onUpdate" is relevant inBusiness Rules, not Client Scripts.
E: onEdit
No "onEdit" client script type exists.
Similar functionality can be achieved with "onChange" or "onCellEdit" scripts.
G: onSave
No "onSave" client script type exists.
"onSubmit" handles validation before saving a record.
Reference from Certified System Administrator (CSA) Documentation:#ServiceNow Docs - Client Scripts
#ServiceNow Client Scripts Documentation
"Client Scripts can beonLoad, onChange, onSubmit, or onCellEditdepending on when they execute." Conclusion:The correct
answers are:
A: onSubmit(Runs when submitting a form)
C: onCellEdit(Runs when editing a list cell)
D: onLoad(Runs when a form loads)
F: onChange(Runs when a field value changes)

NEW QUESTION # 121
What are the main components of the Form Design interface? (Choose three.)

- A. Field Navigator
- B. Page Header
- C. Field Picker
- D. Field Layout
- E. Form Layout

Answer: A,B,E

Explanation:
The Form Designer in ServiceNow allows administrators to create, edit, and configure forms to control how records are displayed
and interacted with in the system. It consists of three key components:
Page Header - This section contains controls such as "Save," "Undo," and "Redo." It allows users to manage their changes while
designing forms. The Page Header also displays the name of the form being edited.
Field Navigator - This panel provides a categorized list of available fields that can be dragged and dropped onto the form layout.
The fields are divided into different sections, such as "Available Fields" and "Existing Fields," helping users to manage the form's data
structure effectively.
Form Layout - This is the central workspace where users design the form by arranging fields. Users can add new fields, move
existing ones, and configure their properties. The layout determines how the form appears to end-users.

questions in the same manner?

NEW QUESTION # 122

An administrator creates "customer_table_admin" and "customer_table_user" roles for the newly created "Customer Table". Which ACL rule would grant access to all rows and all fields to both the customer_table_admin and customer_table_user roles?

- A. customer.none
- B. customer.all
- C. customer.field
- D. customer .*

Answer: D

Explanation:

In ServiceNow Access Control Rules (ACLs), if an administrator wants to grant access to all rows and all fields of a custom table (e.g., customer table) to specific roles (customer_table_admin and customer_table_user), they should create an ACL rule using the format:

➡ □ tablename.*

For the Customer Table, the correct ACL format is:

➡ □ customer.*

This rule allows both customer_table_admin and customer_table_user full access to all fields and records in the customer table.

Why Are Other Options Incorrect?

A . customer.all □

Incorrect syntax; ServiceNow does not use .all in ACL rules.

C . customer.field □

This would apply only to a specific field, not all rows and fields.

D . customer.none □

No such ACL naming convention exists in ServiceNow.
