準確的CLO-002软件版 |高通過率的考試材料|免費下載CLO-002：CompTIA Cloud Essentials+ Certification Exam

許多考生花費了大量的時間和精力學習CompTIA CLO-002考試相關知識，但是到最後卻沒有成功，分析他們失敗的原因，我們得出結論是沒有針對性的復習。現在，KaoGuTi專門針對認證考試研發出有針對性的CompTIA CLO-

002考古題，為考生獲得認證節約更多的時間和金錢。CLO-002題庫的高效率和準確性兩大特點讓我們收到廣大考生的好評，獲得如此有價值的認證方案對您來說是非常划算的。

CompTIA CLO-002考試是一個業界認可的認證，被各行各業的雇主高度追捧。此認證是展示您在雲端計算方面專業知識的絕佳方式，並有助於您在此領域推進職業生涯。此考試旨在測試您對雲端計算行業的知識和理解，是驗證您在此行業取得成功所需技能的絕佳方式。

最新的 CompTIA Cloud Essentials CLO-002 免費考試真題 (Q324-Q329):

問題 #324
A graphic design company regularly runs out of storage space on its file servers due to the large size of its customer artwork files. The company is considering migrating to cloud computing to solve this problem. Which of the following characteristics of cloud computing is the MOST beneficial reason the company should implement a cloud solution?

- A. Variable costs
- B. Security
- C. Scalability
- D. Hardware independence

答案：C

問題 #325
Which of the following optimizes the virtual resource provisioning process?

- A. Virtual servers
- B. Snapshots
- C. Containerization
- D. Templates

答案：D

解題說明：
Templates are used to optimize the virtual resource provisioning process by allowing administrators to create predefined configurations for virtual machines or environments. These templates can be quickly deployed to provision new virtual resources without needing to manually configure each instance, saving time and reducing errors. This approach streamlines the process of scaling or replicating virtual environments.

問題 #326
A software developer wants to ensure a packaged application can be deployed in different environments without modifying anything but the application settings. The developer creates an image and provides instructions for the systems administrator to use for deployment. This is an example of:

- A. containerization.
- B. application versioning.
- C. source code control.
- D. deployment automation.

答案：A

解題說明：
Containerization is the process of developing software applications for containers, which are isolated user spaces that bundle application code with all the dependencies and libraries required to run on any infrastructure. Containerization allows applications to be deployed in different environments without modifying anything but the application settings. This is different from application versioning, which is the practice of assigning unique identifiers to different versions of an application. Source code control is the management of changes to source code files, which is not related to deployment. Deployment automation is the use of tools and scripts to automate the deployment process, which may or may not involve containers. 問題 #327

A Chief Financial Officer (CFO) is preparing a business case to present to the Chief Executive Officer (CEO) regarding a cloud migration project. Which of the following will provide key financial information to support the decision? (Choose two.)

- A. SOW
- B. PoC
- C. Baseline
- D. ROI
- E. SLA
- F. TCO

答案：D,F

解題說明：

ROI (Return on Investment): ROI provides key financial information by showing the expected financial return from the cloud migration investment. It helps demonstrate whether the migration will be cost-effective and beneficial for the company.
TCO (Total Cost of Ownership): TCO helps estimate the total costs involved in the migration, including both direct and indirect expenses over the long term. This is crucial for comparing the costs of maintaining the current infrastructure versus moving to the cloud. It provides a comprehensive view of the financial impact.

問題 #328

A local university recently shifted most of its critical server infrastructure to an IaaS provider.
Which of the following explains why it would be beneficial to generate updated SOPs for the IT department?

- A. To understand the CSP pricing models
- B. To create awareness of the new maintenance steps
- C. To stay compliant with local regulations with minimal effort
- D. To be prepared for a potential disaster recovery scenario

答案：B

解題說明：

After shifting critical server infrastructure to an IaaS provider, the IT department needs updated Standard Operating Procedures (SOPs) to reflect the changes in how systems are managed.
These SOPs will ensure that the IT team is aware of new maintenance procedures, responsibilities, and workflows specific to the cloud environment. This helps in ensuring smooth operations and effective management of the cloud infrastructure.
