

Professional Questions HPE7-A01 Pdf - 100% Pass HPE7-A01 Exam

2026 Latest Actual4dump HPE7-A01 PDF Dumps and HPE7-A01 Exam Engine Free Share: https://drive.google.com/open?id=1dXJT1AIZTJXTjAd22CBk7T_xt1aWF8D_

The committed team of the Actual4dump is always striving hard to resolve any confusion among its users. The similarity between our HP HPE7-A01 exam questions and the real HP HPE7-A01 certification exam will amaze you. The similarity between the Actual4dump HPE7-A01 pdf questions and the actual HPE7-A01 certification exam will help you succeed in obtaining the highly desired Aruba Certified Campus Access Professional Exam (HPE7-A01) certification on the first go. You will notice the above features in the HP HPE7-A01 Web-based format too. There is no need to go through time-taking installations or agitating plugins to use this format.

HP HPE7-A01 Certification Exam is an exam that validates an individual's skills in designing and implementing reliable, secure and high-performing wireless networks using Aruba products. It is designed for IT professionals who want to gain expertise in deploying and managing Aruba wireless LAN solutions. Aruba Certified Campus Access Professional Exam certification exam assesses the candidate's knowledge of WLAN technologies, planning, and designing Aruba solutions, and managing the deployment.

HPE7-A01 certification exam is an excellent opportunity for IT professionals to enhance their skills and knowledge in Aruba campus access solutions. HPE7-A01 exam is designed to validate the candidate's ability to design, deploy, and maintain Aruba networks that are secure, reliable, and scalable. It is also an opportunity for IT professionals to demonstrate their proficiency in advanced network technologies and practices.

HPE7-A01 exam covers a range of topics related to Aruba networks, including network architecture, security, troubleshooting, and wireless technologies. HPE7-A01 Exam also covers the installation and configuration of Aruba devices, as well as the integration of Aruba products with other networking technologies. Candidates will be required to demonstrate their understanding of these concepts through a combination of multiple-choice and scenario-based questions.

Quiz 2026 HP HPE7-A01 – Efficient Questions Pdf

The effect of the user using the latest HPE7-A01 exam torrent is the only standard for proving the effectiveness and usefulness of our products. I believe that users have a certain understanding of the advantages of our HPE7-A01 study guide, but now I want to show you the best of our HPE7-A01 Training Materials - Amazing pass rate. Based on the statistics, prepare the exams under the guidance of our HPE7-A01 practice materials, the user's pass rate is up to 98% to 100%, And they only need to practice latest HPE7-A01 exam torrent to hours.

HP Aruba Certified Campus Access Professional Exam Sample Questions (Q147-Q152):

NEW QUESTION # 147

In an ArubaOS 10 architecture using an AP and a gateway, what happens when a client attempts to join the network and the WLAN is configured with OWE?

- A. Authentication information is not exchanged
- B. No encryption is applied.
- C. RADIUS protocol is utilized.
- D. The Gateway will not respond.

Answer: A

Explanation:

This is the correct statement about what happens when a client attempts to join the network and the WLAN is configured with OWE (Opportunistic Wireless Encryption). OWE is a standard that provides encryption for open networks without requiring any authentication or credentials from the client or the network. OWE uses a Diffie-Hellman key exchange mechanism to establish a secure session between the client and the AP without exchanging any authentication information. The other options are incorrect because they either describe scenarios that require authentication or encryption methods that are not used by OWE. Reference: https://www.arubanetworks.com/assets/wp/WP_WiFi6.pdf https://www.arubanetworks.com/assets/ds/DS_AP510Series.pdf

NEW QUESTION # 148

A customer is using a legacy application that communicates at layer-2. The customer would like to keep this application working across the campus which is connected via layer-3. The legacy devices are connected to Aruba CX 6300 switches throughout the campus.

Which technology minimizes flooding so the legacy application can work efficiently?

- A. EVPN-VXLAN
- B. Generic Routing Encapsulation (GRE)
- C. Ethernet over IP (EoIP)
- D. Static VXLAN

Answer: A

Explanation:

EVPN-VXLAN is a technology that allows layer-2 communication across layer-3 networks by using Ethernet VPN (EVPN) as a control plane and Virtual Extensible LAN (VXLAN) as a data plane³. EVPN-VXLAN can be used to support legacy applications that communicate at layer-2 across different campuses or data centers that are connected via layer-3. EVPN-VXLAN minimizes flooding by using BGP to distribute MAC addresses and IP addresses of hosts across different VXLAN segments³. EVPN-VXLAN also provides benefits such as loop prevention, load balancing, mobility, and scalability³. References: ³ https://www.arubanetworks.com/assets/tg/TG_EVPN_VXLAN.pdf

NEW QUESTION # 149

Using Aruba best practices what should be enabled for visitor networks where encryption is needed but authentication is not required?

- A. Opportunistic Wireless Encryption
- B. Open Network Access
- C. Wi-Fi Protected Access 3 Enterprise
- D. Wired Equivalent Privacy

Answer: A

Explanation:

Opportunistic Wireless Encryption (OWE) is a feature that provides encryption for open wireless networks without requiring authentication. OWE uses an enhanced version of the 4-way handshake to establish a pairwise key between the client and the AP, which is then used to encrypt the wireless traffic using WPA2 or WPA3 protocols. OWE can be used for visitor networks where encryption is needed but authentication is not required.

NEW QUESTION # 150

A customer is using stacked Aruba CX 6200 and CX 6300 switches for access and a VSX pair of Aruba CX 8325 as a collapsed core 802.1X is implemented for authentication. Due to the lack of cabling, some unmanaged switches are still in use. Sometimes devices behind these switches cause network outages. The switch should send a warning to the helpdesk when the problem occurs. You have been asked to implement an effective solution to the problem. What is the solution for this?

- A. Configure loop protection on all edge ports of the Aruba CX 6200 and CX 6300 switches No trap option is needed
- B. Configure spanning tree on the Aruba CX 6200 and CX 6300 switches No trap option is needed
- **C. Configure loop protection on all edge ports of the Aruba CX 6200 and CX 6300 switches Set up the trap-option**
- D. Configure spanning tree on the Aruba CX 8325 switches Set the trap-option

Answer: C

Explanation:

This is the correct solution to the problem of devices behind unmanaged switches causing network outages due to loops. Loop protection is a feature that allows an Aruba CX switch to detect and prevent loops by sending loop protection packets on each port, LAG, or VLAN on which loop protection is enabled. If a loop protection packet is received by the same switch that sent it, it indicates a loop exists and an action is taken based on the configuration. Loop protection should be configured on all edge ports of the Aruba CX 6200 and CX 6300 switches, which are the ports that connect to end devices or unmanaged switches. The trap-option should be set up to send a warning to the helpdesk when a loop is detected. The other options are incorrect because they either do not configure loop protection or do not set up the trap-option. Reference:

NEW QUESTION # 151

Match the terms below to their characteristics (Options may be used more than once or not at all.)

Answer:

Explanation:

Explanation:

- a) A device with IP address 10.1.3.7 in a network wants to send the traffic stream to a device with IP address 10.13.4.2 in the other network -> Unicast
- b) One/more senders and one/more recipients participate in data transfer traffic -> Multicast
- c) Sent to all hosts on a remote network -> IP Directed Broadcast
- d) Sent to all NICs on the same network segment as the source NIC -> Broadcast
- References:
1 <https://www.thestudygenius.com/unicast-broadcast-multicast/> The terms broadcast, IP directed broadcast, multicast, and unicast are different types of communication or data transmission over a network. They differ in how many devices are involved in the communication and how they address the messages. The following table summarizes the characteristics of each term:
