ACAMS Certified Anti-Money Laundering Specialist (CAMS7 the 7th edition) Sample Questions (Q203-Q208):

NEW QUESTION # 203

Why are casinos considered vulnerable to money laundering?

- A. They eliminate customer anonymity completely
- B. They prohibit cash usage
- C. They only accept government payments
- **D. They can convert cash into seemingly legitimate winnings**

Answer: D

Explanation:

Casinos may be exploited to launder illicit funds by converting cash into chips and later redeeming them as gambling winnings. Large cash-intensive operations combined with rapid movement of funds create vulnerabilities requiring strong customer identification and transaction monitoring controls.

NEW QUESTION # 204

Which of the following are key financial crime risks associated with real estate companies? (Choose four.)

- **A. Real estate transactions often involve financial institutions and other professional gatekeepers**
- **B. Beneficial ownership information might be opaque, and criminals may abuse arrangements like shell companies and trusts**
- **C. Criminal networks could purchase real estate for use as supply houses or locations to grow, manufacture, or distribute illicit narcotics**
- **D. Buying property allows for the movement of large amounts of funds in a single transaction**
- E. Markets can be volatile, and buyers may not achieve a strong return on their investment
- F. The high value of properties may require multiple types of financing, which can make it more difficult to identify the source of funds

Answer: A,B,C,D

Explanation:

Real estate companies face key financial crime risks due to the ability to move large sums in a single transaction, the use of property by criminal networks for illicit operations, the opacity of beneficial ownership structures, and the involvement of professional gatekeepers - such as lawyers and financial institutions - who may unknowingly facilitate money laundering.

NEW QUESTION # 205

An AML/CFT unit often compiles information about customer activity and product usage that might be of interest to other parts of the organization. Before allowing the unit to communicate such information internally, the organization must review:

- A. The risk rating of the customers to avoid sharing data relating to higher risk customers
- **B. Applicable data privacy laws in relevant jurisdictions and the organization's data security and privacy policies for any limitations**
- C. The organization's AML compliance policies to ensure that customer data can be easily shared internally and internationally
- D. Enterprise-wide risk assessments and the employee handbook for any limitations on sharing commercially sensitive customer data

Answer: B

NEW QUESTION # 206

Which ML/TF risks are associated with cryptoassets? (Select Three.)

- A. Global reach
- B. Use to layer illicit funds
- C. Devaluation
- D. Potential for anonymity
- E. Smart contract vulnerabilities
- F. High transaction fees

Answer: A,B,D

Explanation:

Cryptoassets, such as cryptocurrencies, pose specific ML/TF risks due to their technological characteristics and usage patterns:

* Potential for anonymity (C): Cryptoassets allow users to make transactions without revealing their true identities, which hinders law enforcement from tracking illicit activity. The CAMS 6th Edition states:

"Cryptoassets can be transferred or exchanged between users without the need for identification, presenting a significant risk due to the potential for anonymity." (CAMS 6th Edition, Chapter: Risks and Methods of Money Laundering and Terrorist Financing, Virtual Assets section)

* Global reach (D): Cryptoassets operate on a global scale, enabling rapid cross-border transfers without the limitations of traditional financial systems. This increases the complexity of monitoring and controlling illicit transactions. "The global nature of virtual assets makes it easy for criminals to move value across borders quickly, evading jurisdictional controls." (CAMS 6th Edition; FATF Guidance on Virtual Assets 2019)

* Use to layer illicit funds (F): The ability to move cryptoassets between numerous wallets and exchanges allows criminals to obscure the source of funds through layering, a key stage of money laundering.

"Layering can be achieved by rapidly moving cryptoassets between wallets, exchanges, and across different jurisdictions, making tracing more difficult." (CAMS 6th Edition, Chapter: Risks and Methods of Money Laundering and Terrorist Financing) References: ACAMS Study Guide 6th Edition, Chapter: Risks and Methods of Money Laundering and Terrorist Financing, Virtual Assets/Virtual Currencies FATF Guidance for a Risk-Based Approach to Virtual Assets (2019) EU 5th AML Directive (2018/843)

NEW QUESTION # 207

Which of the following laws or regulations can impact the application of AML/CFT programs and require financial institutions (r" Is) to balance multiple compliance requirements?

- A. AML/CFT laws are the primary focus for FIs, and other regulations like data privacy and consumer protection may only indirectly influence their compliance obligations
- B. Consumer protection laws may intersect with AML/CFT requirements when handling customer complaints or disputes, potentially affecting how FIs implement their compliance programs.
- C. Environmental, social, and governance (ESG) frameworks can influence a FI's risk management strategies but are generally considered separate from core AML/CFT compliance requirements
- D. Data privacy laws can restrict the sharing of customer information, while financial inclusion initiatives require FIs to avoid excessive de-risking that could exclude vulnerable populations.

Answer: D
