tloc 10.1.1.104 color mpls encaps ipsec preference 500
tloc 10.1.1.104 color biz-internet encaps ipsec preference 400
```

Answer: B

Explanation:

To configure Rome WAN Edge to prefer the MPLS cloud for reaching Paris WAN Edge, and use biz-internet as a backup, the policy must be set correctly to define the preference for each transport link.

* Understanding TLOCs (Transport Locator): TLOCs represent the transport network paths (MPLS, Internet, etc.) available for SD-WAN. The preference values assigned to TLOCs determine their priority. A lower preference value indicates a higher priority.

* Policy Configuration Analysis:

* Option A: This option correctly configures the TLOC list for the system IPs representing the MPLS and biz-internet links with the appropriate preferences (500 for MPLS and 400 for biz-internet).

* Other options either repeat the TLOC configuration incorrectly or reference wrong system IPs.

* Policy Configuration:

```
policy
lists
tloc-list TLOC-1
tloc 10.1.1.102 color mpls encaps ipsec preference 500
tloc 10.1.1.102 color biz-internet encaps ipsec preference 400
