## Arch-303 Pass4sure Pass Guide - Arch-303 Actual Test

Those who want to prepare for the IT certification exam are helpless. But they have to do it. So they have restless state of mind. However, With ActualPDF Salesforce Arch-303 Exam Training materials, the kind of mentality will disappear. With ActualPDF's Salesforce Arch-303 exam training materials, you can be brimming with confidence, and do not need to worry the exam. Of course, you can also face the exam with ease. This is not only psychological help, but more importantly, it allows you to pass the exam and to help you get a better tomorrow.

## Salesforce Certified B2C Commerce Architect Sample Questions (Q67-Q72):

### NEW QUESTION # 67

An Architect has been asked by the Business to integrate a newpayment LINK cartridge. As part of the integration, the Architect has created four new services to access various endpoints in the integration.

How can the Architect move the new services to Production when the integration is ready for launch?

- A. The new services will be moved to production with a Site Import.
- B. The new services must be manually exported from staging and Imported into Production.
- C. The new services will be moved to Production with a Data Replication.
- **D. The new services will be moved to Production with a Code Replication.**

**Answer: D**

Explanation:

For deploying new services related to a payment LINK cartridge to Production, the correct method is through Code Replication (D). This approach ensures that all new code changes, including the integration services, are consistently applied across different environments. Code replication covers deploying all changes made in code, scripts, and service configurations from a staging or development environment to the production environment. This process ensures that all new functionalities are tested in a controlled environment before being moved to production, reducing the risk of errors affecting the live site.

### NEW QUESTION # 68

A new version of the Page Show controller is required for implementation of Page Designer specific look. It requires implementation of a specific, cache period for Page Designer pages, which is not currently available in the base Storefront Reference Architecture (SFRA) cache.js module. What two steps should the Architect instruct the developer to implement?

Choose 2 answers

- A. Create new Page.js controller in client's cartridge. Extend the code from base and prepend the new cache middleware function to Page-Show route.
- B. Create new cache.js in client's cartridge. Copy cache.js from app\_storefront\_base and add a function for the Page Designer caching.
- C. Create new cache.js in client's cartridge. Extend cache.js from app\_storefront\_base and add a function for the Page Designer caching.
- D. Create new Page.js controller in client's cartridge. Copy code from base and modify the Page-Show route to include the new cache middleware function.

**Answer: C,D**

Explanation:

To implement a specific cache period for Page Designer pages in SFRA:

\* Option A involves creating a new Page.js controller in the client's cartridge, where the existing Page-Show route can be modified to include a custom caching logic. This ensures that the specific caching requirements for Page Designer pages are met without altering the base functionality for other pages.

\* Option D calls for extending the existing cache.js module in the client's cartridge to include a function specifically for Page Designer caching. This allows for reusing the existing caching logic while adding enhancements specific to the Page Designer pages, thus maintaining efficiency and clarity in the codebase.

Both options provide a clean, maintainable approach to customizing caching for specific requirements in SFRA, avoiding disruptions in other areas of the site functionality.

#### NEW QUESTION # 69

A developer is validating the pipeline cache and noticed that the PDP page is very low cached. The one parameter is showing the position on the product listing page upon checking the site and code.

What should the developer adjust in order to improve the page cache hit ratio, keeping in mind that the client is insisting on the parameter for their analytics?

- A. Rework the implementation so it reads the parameter on client-side, passes it to the analytics and exclude it from cache parameters.
- B. Add the key to the cache exclude parameters.
- C. Rework the implementation so the parameter is not passed in the URL and is read from the URL hash.
- D. Rework the implementation so it doesn't depend on that parameter.

**Answer: B**

#### NEW QUESTION # 70

An Architect is performing an audit of production logs via Log Center and finds some potentially dangerous custom log output.

In which two ways is this log output improper in a production environment? Choose 2 answers

- A. The log information includes the order number and customer's email, which violates PCI.
- B. The log information includes the customer's card name as it appears along with the credit card number (PAN), which violates PCI.
- C. Information logs should not be used in a production environment
- D. The log information includes the customer's card CVV (card security code) and expiration date, which violates PCI.

**Answer: A,B**

Explanation:

In a production environment, logging sensitive customer information such as credit card details (PAN, CVV, expiration date) can lead to severe security and compliance issues, specifically violating PCI DSS (Payment Card Industry Data Security Standard) requirements. The standards strictly prohibit the storage of CVV codes and mandate that any PAN displayed must be masked. Storing such data in logs is not only a risk for data breaches but also non-compliance with these standards can lead to penalties.

\* Option A: Including the customer's card name along with the full credit card number in logs is a clear violation of PCI DSS requirements, which stipulate that no more than the last four digits of the card number may be displayed.

\* Option B: Logging the card security code (CVV) and expiration date is explicitly prohibited by PCI DSS, which requires that sensitive authentication data, including CVV, must never be stored post-authentication, even if it is encrypted.

### NEW QUESTION # 71

The Client is Crowding and decided to migrate its ecommerce website to B2C Commerce. The Client provided the Architect with the metrics for its existing website over the past 12 months and forecasted into the next year:

Noting these historical metrics and the forecasted growth of 300%, which load test targets meet best practices for testing the new B2C Commerce site?

- A. 1500 visits per hour, 30000 page views per hour, and 375 orders per hour
- B. 3000 visits per hour, 60000 page views per hour, and 750 orders per hour
- C. 15000 visits per hour, 300000 page views per hour, and 3750 orders per hour
- D. 150000 visits per hour, 3000000 page views per hour, and 37500 orders per hour

**Answer: C**

Explanation:

Considering the existing metrics and forecasted 300% growth, the appropriate load testing targets for the new B2C Commerce site would be:

\* 15000 visits per hour: This figure is calculated by applying the expected growth to the peak visits per hour (1000 visits), resulting in 4000 visits. The choice of 15000 provides a higher buffer to accommodate unforeseen spikes in traffic.

\* 300000 page views per hour: Similarly, this is scaled up from the peak page views per hour (20000) considering the growth, ensuring the site can handle high demand and interactions.

\* 3750 orders per hour: This target is based on the peak orders per hour (250) with the growth applied, allowing testing of the system's ability to handle transactions under significant load.

These targets ensure that the system is robust enough to handle increased traffic and transactions without performance degradation, crucial for maintaining customer satisfaction and operational stability.

### NEW QUESTION # 72

.....

If you are going to buy Arch-303 training materials online, the security of the website is important. We have technicians to examine the website every day, if you chose us, we provide you with a clean and safe online shopping environment. In addition, Arch-303 exam materials are compiled by professional experts, and therefore the quality can be guaranteed. We offer you free demo to have a try before buying, so that you can have a deeper understanding of what you are going to buy. Arch-303 Training Materials contain also have certain number of questions, and if will be enough for you to pass the exam. We have online and offline chat service stuff, if you have any questions, you can consult us.
