

素晴らしいPortworx-Enterprise-Professional受験料一回合格-ハイパスレートのPortworx-Enterprise-Professional勉強時間

2026年MogiExamの最新Portworx-Enterprise-Professional PDFダンプおよびPortworx-Enterprise-Professional試験エンジンの無料共有: https://drive.google.com/open?id=1N89F2DTSpKkRdqQSeLJEcTZRWAZONCX_

MogiExamは専門的に IT認証試験に関する資料を提供するサイトで、100パーセントの合格率を保証できます。それもほとんどの受験生はMogiExamを選んだ理由です。MogiExamはいつまでも受験生のニーズに注目していて、できるだけ皆様のニーズを満たします。MogiExamのPure StorageのPortworx-Enterprise-Professional試験トレーニング資料は今までがないIT認証のトレーニング資料ですから、MogiExamを利用したら、あなたのキャリアは順調に進むことができるようになります。

Pure Storage Portworx-Enterprise-Professional 認定試験の出題範囲:

トピック	出題範囲
トピック 1	<ul style="list-style-type: none">Operations and Administration: This section of the exam measures the skills of Storage Administrators and Kubernetes Operators and covers managing cluster operations and administering container storage environments using Portworx. Candidates demonstrate the ability to efficiently manage and operate storage clusters in production environments.
トピック 2	<ul style="list-style-type: none">Security: This section focuses on Security Engineers and Compliance Officers responsible for enforcing security measures in container storage environments. Topics include managing encryption, access control, and compliance policies to protect stored data.
トピック 3	<ul style="list-style-type: none">Business Continuity: This domain measures the skills of Disaster Recovery Planners and IT Continuity Managers in implementing backup, recovery, and failover strategies. It ensures candidates understand how to sustain business operations and data availability using Portworx features.
トピック 4	<ul style="list-style-type: none">Observability and Troubleshooting: This section assesses the expertise of Support Engineers and System Administrators in monitoring storage deployments and troubleshooting issues. Candidates learn to use observability tools and techniques to maintain system health and resolve performance problems effectively.
トピック 5	<ul style="list-style-type: none">Deploy and Install: This domain targets DevOps Engineers and Infrastructure Specialists and focuses on deploying and installing Portworx storage solutions. It includes configuring and setting up storage clusters to support containerized applications reliably and securely.

弊社のPortworx-Enterprise-Professional練習資料は、さまざまな学位の受験者に適しています。この受験者は、この分野の知識のレベルに関係なく互換性があります。これらのPure Certified Portworx Enterprise Professional (PEP) Examトレーニング資料は、当社にとって名誉あるものであり、お客様の目標を達成するための最大の特権として扱っています。一方、理論と実践を離婚することはできませんが、心配する必要はありません。刺激テストの質問があり、学習と実践の両方を同時に行うことができます。私たちの知る限り、Portworx-Enterprise-Professional試験準備は何百万人もの受験者に夢を追いかけ、より効率的に学習するように動機付けました。Portworx-Enterprise-Professionalの練習資料は、あなたを失望させません。

Pure Storage Pure Certified Portworx Enterprise Professional (PEP) Exam 認定 Portworx-Enterprise-Professional 試験問題 (Q52-Q57):

質問 # 52

Which Portworx component is used to co-locate volumes with pods?

- A. Stork
- **B. Volume Placement Strategy**
- C. Autopilot

正解: B

解説:

Comprehensive and Detailed Explanation From Exact Extract:

Portworx's Volume Placement Strategy ensures that persistent volumes are co-located with the pods that use them, enhancing performance and reducing latency. This strategy involves applying placement rules and constraints that guide Kubernetes scheduler and Portworx storage operations to place data volumes on nodes close to or the same as the pods. Co-location improves I/O throughput and application responsiveness by minimizing network hops between compute and storage resources. While Autopilot automates scaling and Stork manages storage-aware scheduling, Volume Placement Strategy specifically handles volume location relative to workloads. The Portworx architecture documentation highlights this component as critical for optimizing storage efficiency and workload performance in Kubernetes environments running Portworx storage **【Pure Storage Portworx Architecture Docs source】**.

質問 # 53

What command can an administrator run to view Portworx alerts?

- A. Use Grafana to view alerts
- B. `pxctl cd list alerts`
- **C. `pxctl alerts show`**

正解: C

解説:

Comprehensive and Detailed Explanation From Exact Extract:

To view current alerts raised by Portworx within the cluster, the primary command is `pxctl alerts show`. This CLI command lists all active alerts with details such as severity, affected resources, and timestamps. It helps administrators quickly identify issues impacting cluster health, storage pools, volumes, or nodes. While Grafana is a powerful visualization tool often used alongside Prometheus for monitoring, it requires additional setup and does not directly replace the immediate, real-time alert query functionality of `pxctl`. The `pxctl cd list alerts` is not a valid command. Portworx documentation emphasizes `pxctl alerts show` as the go-to tool for alert inspection during operational checks and troubleshooting, offering a concise and focused alert view integrated with Portworx's internal alerting system **【Pure Storage Portworx Alerting Guide source】**.

質問 # 54

An infrastructure admin wants to restrict installing Portworx on two nodes.
What label does the node need to have?

- A. `px/enabled=false`
- B. `px/service=stop`
- C. `px/storage-node=false`

正解: A

解説:

Comprehensive and Detailed Explanation From Exact Extract:

Portworx uses node labeling as a mechanism to control on which Kubernetes nodes Portworx is installed and allowed to operate. To restrict Portworx installation on specific nodes, those nodes should be labeled with `px/enabled=false`. This label tells the Portworx Operator or installation scripts to exclude these nodes from Portworx deployment, preventing Portworx daemons from running there. This feature is useful for reserving nodes for non-storage workloads or avoiding unsupported hardware. Labels like `px/service=stop` or `px/storage-node=false` are not recognized by Portworx as controls for installation exclusion. The official Portworx deployment and node labeling documentation specify `px/enabled=false` as the standard method for controlling node participation in the storage cluster, offering administrators fine-grained control over cluster topology and resource allocation 【Pure Storage Portworx Deployment Guide source】.

質問 # 55

A Portworx administrator wants to create a storage class that can be used to create volumes with the following characteristics:

* Encrypted volume

* Two replicas

Which definition should the administrator use?

- A. `kind: StorageClass`
`apiVersion: storage.k8s.io/v1`
`metadata:`
`name: px-encrypted`
`provisioner: kubernetes.io/portworx-volume`
`parameters:`
`encrypted: "true"`
`repl: "2"`
- B. `kind: StorageClass`
`apiVersion: storage.k8s.io/v1`
`metadata:`
`name: px-encrypted`
`provisioner: kubernetes.io/portworx-volume`
`parameters:`
`secure: "true"`
`repl: "2"`
- C. `kind: StorageClass`
`apiVersion: storage.k8s.io/v1`
`metadata:`
`name: px-encrypted`
`provisioner: kubernetes.io/portworx-volume`
`parameters:`
`sharedv4: "true"`
`repl: "2"`

正解: A

解説:

Comprehensive and Detailed Explanation From Exact Extract:

To create a StorageClass in Kubernetes for Portworx volumes that are encrypted and replicated twice, the correct parameters are `encrypted: "true"` to enable encryption and `repl: "2"` to specify two replicas. Option A accurately sets these parameters, ensuring volumes provisioned with this StorageClass will be encrypted at rest and maintain two replicas for data redundancy. Option B uses `sharedv4: "true"`, which relates to NFS-like sharing, not encryption. Option C uses `secure: "true"`, which is not the recognized parameter for enabling encryption in Portworx StorageClass definitions. The official Portworx StorageClass parameter

documentation confirms encrypted as the correct flag for encryption and repl to specify replication factor, enabling administrators to enforce data security and availability policies declaratively through Kubernetes manifests 【Pure Storage Portworx StorageClass Guide source】.

質問 # 56

Which command should an administrator run to initiate the license expansion for a blue-green upgrade in a Portworx cluster?

- A. `pxctl license expand --start`
- B. `pxctl cluster expand -start`
- C. `pxctl node expand --start`

正解: A

解説:

Comprehensive and Detailed Explanation From Exact Extract:

During blue-green upgrades or license expansions in Portworx clusters, administrators use the command `pxctl license expand --start` to initiate the license expansion process. This command signals Portworx to begin applying the new license, enabling additional nodes or features as permitted. The process is carefully managed to avoid disruption during the upgrade and ensure that new license entitlements are recognized. The Portworx upgrade and licensing documentation specify this command as the official method for license expansion, ensuring compliance and seamless cluster scaling during complex upgrade workflows 【Pure Storage Portworx License Management Guide source】.
