- A. To compound and accelerate the impact of favorable events.
- **B. To maintain employee and other stakeholder confidence in the system's effectiveness.**
- C. To provide incentives to employees for favorable conduct.
- D. To escalate incidents for investigation and identify them as in-house or external.

正解: B

質問 # 174

Which trait of the Protector Mindset involves integrating Critical Disciplines to approach work from multiple dimensions?

- **A. Versatile**
- B. Visionary
- C. Accountable
- D. Intradisciplinary

正解: A

解説:

The Protector Mindset in Governance, Risk, and Compliance (GRC) emphasizes traits that enable individuals and organizations to effectively manage risk, ensure compliance, and uphold ethical standards. "Versatile" refers to the ability to integrate and apply critical disciplines from multiple dimensions to address complex challenges. This is essential in GRC since it involves navigating multiple domains such as governance, compliance, risk management, internal controls, ethics, and security.

Key Elements of Versatility:

Combining knowledge from governance frameworks (e.g., NIST, COSO, ISO 31000).

Applying insights from risk management, compliance audits, and ethical considerations.

Balancing operational objectives with strategic oversight.

Relevant GRC Frameworks Supporting Versatility:

COSO ERM Framework: Focuses on integrating risk management practices into all business processes.

NIST Cybersecurity Framework (CSF): Encourages a multidisciplinary approach to manage cybersecurity risks.

In summary, the "Versatile" trait ensures that Protectors leverage a broad range of expertise to meet organizational objectives while managing risks and compliance obligations effectively.

質問 # 175

What does "Effectiveness" refer to when assessing Total Performance in the GRC Capability Model?

- A. The ability of a program to ensure compliance with laws and regulations and avoid issues or incidents of noncompliance
- B. The speed at which a program is implemented and executed with a good design that can be implemented in every department
- **C. The soundness and logical design of a program, its alignment with best practices, coverage of topical areas, and impact on intended business objectives**
- D. The cost savings achieved by implementing a GRC program

正解: C

質問 # 176

How does assurance help management and stakeholders gain confidence?

- A. It helps identify and mitigate potential risks and threats to the organization
- B. It ensures financial statements are accurate and free from misstatements
- C. It verifies that what stakeholders believe is happening, is actually happening
- D. It ensures policies and procedures meet regulatory standards

正解: C

解説:

Assurance provides stakeholders with a level of confidence that an organization's representations are accurate and reliable. This trust is built by verifying that processes and outcomes align with expectations, whether they pertain to compliance, financial health, or operational efficiency.

How Assurance Builds Confidence:

* Validation of Expectations:

* Assurance activities confirm that reported activities and outcomes are indeed occurring as described.

* Example: Verifying that internal controls are functioning as reported in compliance reports.

* Transparency and Accountability:

* By independently reviewing and confirming organizational practices, stakeholders can trust the accuracy of information.

* Risk Mitigation:

* Assurance identifies gaps and areas for improvement, giving stakeholders confidence that risks are being managed effectively.

Why Option D is Correct:

By verifying stakeholders' beliefs, assurance builds trust that the organization operates as reported, which is crucial for informed decision-making.

Why the Other Options Are Incorrect:

* A. Regulatory standards: Assurance goes beyond regulatory compliance; it covers broader aspects.

* B. Financial accuracy: While financial assurance is a part of it, assurance spans operational and strategic areas as well.

* C. Risk mitigation: This is an indirect benefit, but the primary role is verification and trust-building.

References and Resources:

* ISO 31000:2018- Discusses the role of assurance in risk management and stakeholder trust.

* COSO ERM Framework- Emphasizes the importance of assurance in achieving organizational objectives.

質問 # 177

In the IACM, what is the role of Prevent/Deter Actions & Controls?

- A. To identify areas in the organization where compliance issues may arise
- B. To ensure compliance with industry-specific regulations
- C. To promote collaboration and teamwork among employees
- D. To decrease the likelihood of unfavorable events

正解: D

解説:

The Integrated Action and Control Model (IACM) outlines various actions and controls that help organizations manage risks, achieve objectives, and ensure compliance. Prevent/Deter Actions & Controls are proactive measures designed to reduce the probability of unfavorable events from occurring.

Key Points About Prevent/Deter Actions & Controls:

* Purpose:

* These actions focus on minimizing the likelihood of risks by addressing vulnerabilities and implementing robust preventive measures.

* Examples include implementing firewalls, conducting regular training programs, and enforcing access controls.

* Alignment with Risk Management Frameworks:

* Frameworks like NIST RMF and ISO 31000 highlight prevention as the first step in managing risks effectively.

* Examples:

* Security awareness training to prevent phishing attacks.

* Anti-bribery controls to deter unethical practices.
