

# Easy Access to CompTIA CV0-004 Exam Questions in PDF Format

match? (Select two).

- A: Resource tagging
- B: Discretionary access control
- C: Multifactor authentication
- D: Role-based access control
- E: Token-based authentication
- F: Bastion host

Correct Answer: B, D

Explanation:

Discretionary Access Control (DAC) and Role-Based Access Control (RBAC) are effective methods for granting authorization based on system classification levels. DAC allows resource owners to grant access rights, making it flexible for environments with varying classification levels. RBAC assigns permissions based on roles within an organization, aligning access rights with the user's job functions and ensuring that users access only what is necessary for their role, which can be mapped to system classifications. CompTIA Cloud+ content covers various access control models, emphasizing the importance of implementing appropriate security measures that align with organizational policies and classification levels to ensure secure and authorized access to cloud systems.

Question 3. (HOTSPOT)

An e-commerce company is migrating from an on-premises private cloud environment to a public cloud IaaS environment. You are tasked with right-sizing the environment to save costs after the migration. The company's requirements are to provide a 20% overhead above the average resource consumption, rounded up.

INSTRUCTIONS

Review the specifications and graphs showing resource usage for the web and database servers. Determine the average resource usage and select the correct specifications from the available drop-down options.

## CV0-004 Exam Voucher - Exam CV0-004 Certification Cost

Once you decide to pass the CompTIA Cloud+ (CV0-004) Certification Exam exam and get the certification, you may encounter

many handicaps that you don't know how to deal with, so, you may think that it is difficult to pass the exam and get the certification. In order to help you solve these problem and help you pass the exam easy, we compiled such a CV0-004 exam torrent. We can promise that you will have no regret buying our CompTIA Cloud+ (CV0-004) Certification Exam exam dumps. If you are hesitating to buy our CV0-004 Test Quiz, if you are anxious about whether our product is suitable for you or not, we think you can download the trail version. We believe our CompTIA Cloud+ (CV0-004) Certification Exam exam dumps will help you make progress and improve yourself.

## CompTIA Cloud+ (CV0-004) Certification Exam Sample Questions (Q173-Q178):

### NEW QUESTION # 173

A developer is building an application that has multiple microservices that need to communicate with each other. The developer currently manually updates the IP address of each service. Which of the following best resolves the communication issue and automates the process?

- A. Fan-out
- **B. Service discovery**
- C. DNS
- D. Managed container services

**Answer: B**

Explanation:

Service discovery is a key component in microservices architectures, allowing services to dynamically discover and communicate with each other. By implementing service discovery, the developer can automate the process of updating service addresses, resolving the communication issue without manual updates to IP addresses, thus ensuring seamless interaction between the microservices.

### NEW QUESTION # 174

A list of CVEs was identified on a web server. The systems administrator decides to close the ports and disable weak TLS ciphers. Which of the following describes this vulnerability management stage?

- A. Assessment
- B. Identification
- **C. Remediation**
- D. Scanning

**Answer: C**

Explanation:

Closing the ports and disabling weak TLS ciphers as a response to a list of identified CVEs (Common Vulnerabilities and Exposures) describes the vulnerability management stage of 'remediation'. This stage involves taking actions to resolve vulnerabilities and mitigate potential risks. References: Vulnerability management stages, including remediation efforts, are a key aspect of the security measures discussed in CompTIA Cloud+.

### NEW QUESTION # 175

A systems engineer tries to mount an iSCSI LUN to a VM host in a data center, but the host does not discover any iSCSI targets. A sample of the switch configuration is shown in the following image:

□ Which of the following configuration changes would most likely resolve the discovery issues?

- **A. Changing the access VLAN for GigabitEthernet 1/0/2 to 25**
- B. Enabling jumbo frames on GigabitEthernet 1/0/6 and GigabitEthernet 1/0/7
- C. Disabling GigabitEthernet 1/0/7
- D. Changing the MTU on GigabitEthernet 1/0/2

**Answer: A**

Explanation:

Comprehensive and Detailed 150 to 200 words of Explanation from CompTIA Cloud CV0-004 Study guide and objectives:

The most likely cause is a Layer 2 segmentation mismatch between the VM host's storage uplink and the SAN's iSCSI network. In the provided switch configuration, the VM host storage uplink on GigabitEthernet 1/0/2 is configured as an access port in VLAN 24, while the SAN iSCSI controller ports (GigabitEthernet 1/0/6 and 1/0/7) are placed in VLAN 25. If the VM host's iSCSI initiator interface is connected to Gi1/0/2, it will be in VLAN 24 and therefore cannot reach iSCSI targets in VLAN 25-preventing discovery entirely (no iSCSI SendTargets responses, no target login). This aligns with Cloud+ (CV0-004) networking objectives emphasizing network segmentation, correct VLAN placement, and hybrid/virtualized storage connectivity. While jumbo frames (MTU 9000+) can improve iSCSI efficiency, MTU mismatch typically impacts performance or causes large-payload issues-not basic target discovery. Correcting Gi1/0/2 to access VLAN 25 restores Layer 2 adjacency to the iSCSI targets.

#### NEW QUESTION # 176

A healthcare organization must follow strict compliance requirements to ensure that PII is not leaked. The cloud administrator needs to ensure the cloud email system can support this requirement Which of the following should the organization enable?

- A. OLP
- B. WAF
- C. IPS
- D. ACL

**Answer: A**

Explanation:

To ensure that Personally Identifiable Information (PII) is not leaked and to comply with strict healthcare regulations, the organization should enable Data Loss Prevention (DLP). DLP systems are designed to detect and prevent unauthorized access or sharing of sensitive data, making them ideal for securing PII in cloud email systems and ensuring compliance with healthcare industry standards.

#### NEW QUESTION # 177

A cloud infrastructure administrator updated the IP tables to block incoming connections and outgoing responses to 104.225.110.203. Which of the following vulnerability management steps is this an example of?

- A. Assessment
- B. Identification
- C. Remediation
- D. Scanning scope

**Answer: C**

Explanation:

Updating the IP tables to block connections to a specific IP address as a response to vulnerabilities is an example of remediation. Remediation involves taking direct action to fix vulnerabilities, such as by applying patches, changing configurations, or, in this case, updating firewall rules to block potentially harmful traffic.
