Valid Braindumps SPLK-3002 Pdf - Easy and Guaranteed SPLK-3002 Exam Success

VCE4Plus is website that can take you access to the road of success. VCE4Plus can provide the quickly passing Splunk certification SPLK-3002 exam training materials for you, which enable you to grasp the knowledge of the certification exam within a

short period of time, and pass Splunk Certification SPLK-3002 Exam for only one-time.

Splunk IT Service Intelligence Certified Admin Sample Questions (Q36-Q41):

NEW QUESTION # 36
What is the main purpose of the service analyzer?

- A. Monitor overall Service and KPI status.
- B. Trigger external alerts based on threshold violations.
- C. Display a list of All Services and Entities.
- D. Allow Analysts to add comments to Alerts.

Answer: A

Explanation:
Reference:
The service analyzer is a dashboard that allows you to monitor the overall service and KPI status in ITSI. The service analyzer displays a list of all services and their health scores, which indicate how well each service is performing based on its KPIs. You can also view the status and values of each KPI within a service, as well as drill down into deep dives or glass tables for further analysis. The service analyzer helps you identify issues affecting your services and prioritize them based on their impact and urgency. The main purpose of the service analyzer is:
D) Monitor overall service and KPI status. This is true because the service analyzer provides a comprehensive view of the health and performance of your services and KPIs in real time.
The other options are not the main purpose of the service analyzer because:
A) Display a list of all services and entities. This is not true because the service analyzer does not display entities, which are IT components that require management to deliver an IT service. Entities are displayed in other dashboards, such as entity management or entity health overview.
B) Trigger external alerts based on threshold violations. This is not true because the service analyzer does not trigger alerts, which are notifications sent to external systems or users when certain conditions are met. Alerts are triggered by correlation searches or alert actions configured in ITSI.
C) Allow analysts to add comments to alerts. This is not true because the service analyzer does not allow analysts to add comments to alerts, which are notifications sent to external systems or users

NEW QUESTION # 37
Which of the following is a best practice when configuring maintenance windows?

- A. Disable any glass tables that reference a KPI that is part of an open maintenance window.
- B. Give the maintenance window a buffer, for example, 15 minutes before and after actual maintenance work.
- C. Change the color of services and entities that are part of an open maintenance window in the service analyzer.
- D. Develop a strategy for configuring a service's notable event generation when the service's maintenance window is open.

Answer: B

Explanation:
Explanation
It's a best practice to schedule maintenance windows with a 15- to 30-minute time buffer before and after you start and stop your maintenance work.

NEW QUESTION # 38
Which of the following best describes a default deep dive?

- A. It initially shows the highest importance KPIs.
- B. It initially shows all the entity swim lanes.
- C. It initially shows all of the KPIs for a selected service.
- D. It initially shows the health scores for all services.

Answer: B

NEW QUESTION # 39
Within a correlation search, dynamic field values can be specified with what syntax?

- A. <fieldname /fieldname>
- B. eval(fieldname)
- C. %fieldname%
- D. fieldname

Answer: A

Explanation:
Reference:
B is the correct answer because dynamic field values can be specified with <fieldname /fieldname> syntax within a correlation search. This syntax allows you to insert values from fields returned by the correlation search into alert actions such as email subject or body. For example, <host /host> inserts the value of the host field into the email. Reference: [Use dynamic field values in correlation searches in ITSI]

NEW QUESTION # 40
When must a service define entity rules?

- A. If the intention is for the KPIs in the service to filter to only entities assigned to the service.
- B. If the intention is for the KPIs in the service to have different aggregate vs. entity KPI values.
- C. To enable entity cohesion anomaly detection.
- D. If some or all of the KPIs in the service will be split by entity.

Answer: A

Explanation:
Provide a value to filter the service to a specific set of entities. These entity rule values are meant to be custom for each service. Reference: https://docs.splunk.com/Documentation/ITSI/4.10.2/SI/EntityRules A is the correct answer because a service must define entity rules if the intention is for the KPIs in the service to filter to only entities assigned to the service. Entity rules are filters that match entities to services based on entity aliases or entity metadata. If you enable the Filter to Entities in Service option for a KPI, you need to define entity rules for the service to ensure that the KPI search results only include the relevant entities for the service. Otherwise, the KPI search results might include entities that are not part of the service or exclude entities that are part of the service. References: [Define entities for a service in ITSI], [Configure KPI settings in ITSI]
