Cisco Implementing Cisco Data Center Core Technologies (350-601 DCCOR) Sample Questions (Q183-Q188):

NEW QUESTION # 183

Refer to the exhibit. Which configuration ensure that the cisco Nexus 7000 series switches are the primary devices for LACP?

- A.

```
N7K_A(config-vpc-domain)# system-priority 100
N7K_B(config-vpc-domain)# system-priority 200
```
- B.

```
N7K_A(config-vpc-domain)# system-priority 32768
N7K_B(config-vpc-domain)# system-priority 32768
```
- C.

```
N7K_A(config-vpc-domain)# system-priority 4000
N7K_B(config-vpc-domain)# system-priority 4000
```
- D.

```
N7K_A(config-vpc-domain)# role priority 1
N7K_B(config-vpc-domain)# role priority 2
```

Answer: C

Explanation:

To ensure that the Cisco Nexus 7000 series switches are the primary devices for LACP, the configuration must use the `lACP system-priority` command to assign a lower priority value to the switches. This command determines which device is the active partner in an LACP negotiation. The lower the priority value, the higher the preference. In option A, the switches have a priority value of 1, which is the lowest possible value and the highest preference. Therefore, option A is the correct configuration to make the switches the primary devices for LACP.

References = The explanation is based on the official Cisco documentation on Configuring Link Aggregation Control Protocol (LACP) 1, specifically the section on Configuring LACP System Priority.
