Salesforce Certified Identity and Access Management Architect Sample Questions (Q81-Q86):

NEW QUESTION # 81

Universal Containers (UC) wants its closed Won opportunities to be synced to a Data warehouse in near real time. UC has implemented Outbound Message to enable near real-time data sync. UC wants to ensure that communication between Salesforce and Target System is secure. What certificate is sent along with the Outbound Message?

- A. The Self-signed Certificates from the Certificate & Key Management menu.
- **B. The default client Certificate or the Certificate and Key Management menu.**
- C. The default client Certificate from the Develop--> API menu.
- D. The CA-signed Certificate from the Certificate and Key Management Menu.

Answer: B

Explanation:

Explanation

The default client certificate or the certificate from the Certificate and Key Management menu is sent along with the outbound message. When sending outbound messages, Salesforce will present the CA-signed or self-signed certificate configured under Setup | Security Controls | Certificate and Key Management | API Client Certificate¹. The default client certificate is a self-signed certificate that Salesforce generates for you when you enable outbound messages². You can also create your own self-signed or CA-signed certificates and upload them to the Certificate and Key Management menu³. The certificate from the Develop | API menu is not used for outbound messages, but for SOAP API clients that need to authenticate with Salesforce⁴.

NEW QUESTION # 82

Universal Containers (UC) is looking to purchase a third-party application as an Identity Provider. UC is looking to develop a business case for the purchase in general and has enlisted an Architect for advice. Which two capabilities of an Identity Provider should the Architect detail to help strengthen the business case?

Choose 2 answers

- A. The Identity provider can store credentials for multiple applications.
- **B. The Identity Provider can authenticate multiple applications.**
- C. The Identity Provider can authenticate multiple social media accounts.
- **D. The Identity Provider can centralize enterprise password policy.**

Answer: B,D

NEW QUESTION # 83

An Architect has configured a SAML-based SSO integration between Salesforce and an external Identity provider and is ready to test it. When the Architect attempts to log in to Salesforce using SSO, the Architect receives a SAML error. Which two optimal actions should the Architect take to troubleshoot the issue?

- A. Ensure the Callback URL is correctly set in the Connected Apps settings.
- B. Use the browser's Development tools to view the Salesforce page's markup.
- **C. Paste the SAML Assertion Validator in Salesforce.**
- **D. Use a browser that has an add-on/extension that can inspect SAML.**

Answer: C,D

NEW QUESTION # 84

Universal Containers (UC) uses Salesforce as a CRM and identity provider (IdP) for their Sales Team to seamlessly login to interna

portals. The IT team at UC is now evaluating Salesforce to act as an IdP for its remaining employees. Which Salesforce license is required to fulfill this requirement?

- A. External Identity
- B. Identity Connect
- C. Identity Verification
- **D. Identity Only**

Answer: D

NEW QUESTION # 85

A group of users try to access one of universal containers connected apps and receive the following error message: "Failed : Not approved for access". what is most likely to cause of the issue?

- **A. The users do not have the correct permission set assigned to them**
- B. The use of high assurance sessions are required for the connected App.
- C. The connected App setting "All users may self-authorize" is enabled.
- D. The salesforce administrators gave revoked the OAuth authorization.

Answer: A

Explanation:

Explanation

The users do not have the correct permission set assigned to them is the most likely cause of the issue. A connected app is a framework that enables an external application to integrate with Salesforce using APIs and standard protocols, such as SAML, OAuth, and OpenID Connect¹. Connected apps use these protocols to authorize, authenticate, and provide single sign-on (SSO) for external apps¹. To access a connected app, users must have the appropriate permissions assigned to them, either through their profile or a permission set². If the users do not have the required permissions, they will receive an error message when they try to access the connected app. The use of high assurance sessions are required for the connected app is not a valid option, as high assurance sessions are related to multi-factor authentication (MFA), not connected apps³. The connected app setting "All users may self-authorize" is enabled is not a cause of the issue, but a possible solution. This setting allows users to access the connected app without pre-approval from an administrator⁴. The Salesforce administrators have revoked the OAuth authorization is not a likely cause of the issue, as OAuth authorization is granted by the users, not the administrators⁵. Revoking OAuth authorization would also affect all users, not just a group of them.
