Quiz 2026 CLO-002: CompTIA Cloud Essentials+ Certification Exam – High-quality Reliable Test Duration

CLO-002 Dumps Torrent and CLO-002 learning materials are created by our IT workers who are specialized in the study of real CompTIA test questions for many years and they check the updating of dumps pdf everyday to make sure the valid of questions and answer, so you can totally rest assure of the accuracy of our ActualTorrent vce braindumps.

CompTIA CLO-002 Certification Exam is a vendor-neutral exam that focuses on cloud computing concepts and principles. It is designed for professionals who are interested in learning about the cloud and its various components, as well as how to plan, design, and manage cloud environments. CompTIA Cloud Essentials+ Certification Exam certification is ideal for IT professionals who are new to cloud computing or those who are looking to expand their knowledge and skills in this area.

CompTIA Cloud Essentials+ Certification Exam Sample Questions (Q211-Q216):

NEW QUESTION # 211
Which of the following BEST describes the open-source licensing model for application software?

- A. Modifications to existing software are not allowed.
- B. Source code is readily available to view and use.
- C. Code modifications must be submitted for approval.
- D. Software is free to use, but the source code is not available to modify.

Answer: B

Explanation:
The open-source licensing model for application software is a type of software license that allows anyone to access, modify, and distribute the source code of the software, subject to certain terms and conditions. The source code is the human-readable version of the software that contains the instructions and logic for how the software works. By making the source code available, open-source software licenses enable collaboration, innovation, and transparency among software developers and users. There are different types of open-source software licenses, such as permissive and copyleft licenses, that vary in the degree of freedom and restriction they impose on the use and modification of the software. However, the common characteristic of all open-source software licenses is that they grant the right to view and use the source code of the software. Therefore, option D is the best description of the open-source licensing model for application software. Option A is incorrect because it describes the opposite of the open-source licensing model. Software that is free to use, but the source code is not available to modify, is called closed-source or proprietary software. Option B is incorrect because it contradicts the open-source licensing model. Modifications to existing software are allowed under open-source software licenses, as long as they comply with the terms and conditions of the license. Option C is incorrect because it does not reflect the open-source licensing model. Code modifications do not need to be submitted for approval under open-source software licenses, although they may need to be shared with the original author or the community, depending on the license. NEW QUESTION # 212
Which of the following would MOST likely trigger a compliance audit?

- A. A breach
- B. A vulnerability
- C. A risk
- D. A threat

Answer: A

NEW QUESTION # 213
A company is moving to the cloud and wants to minimize application downtime. Which of the following would best accomplish this goal?

- A. High availability
- B. Data sovereignty
- C. Deduplication
- D. Compression

Answer: A

Explanation:
High availability (HA) ensures that a system or application remains operational and accessible, even in the event of failures or disruptions. By leveraging high availability architectures, such as redundant components, load balancing, and failover mechanisms, the company can minimize application downtime and maintain continuous service in the cloud environment.

NEW QUESTION # 214
Elastic computing is important to businesses as it relates to which of the following cloud characteristics?

- A. Distribution
- B. Integrity

- C. Security
- D. Scalability

Answer: D

NEW QUESTION # 215

Which of the following is the risk when an IT department restricts itself to solely being an infrastructure provider?

- A. Business users will bypass the IT department
- B. Service providers will bypass the IT department
- C. All of the above are correct
- D. Cloud providers will take over the role of the IT department

Answer: A

NEW QUESTION # 216
