ASIS-PSP Latest Version - ASIS-PSP Test Pattern

It is our consistent aim to serve our customers wholeheartedly. Our ASIS-PSP real exam try to ensure that every customer is satisfied, which can be embodied in the convenient and quick refund process. Although the passing rate of our ASIS-PSP training quiz is close to 100%, if you are still worried, we can give you another guarantee: if you don't pass the exam, you can get a full refund. So there is nothing to worry about, just buy our ASIS-PSP exam questions.

ASIS Physical Security Professional Exam Sample Questions (Q49-Q54):

NEW QUESTION # 49

Pandemics affect people, not infrastructure.

- A. False
- **B. True**

Answer: B

NEW QUESTION # 50

Which of the following should take precedence when identifying countermeasures?

- A. Criticality
- B. Probability
- **C. Overall risk**
- D. Cost

Answer: C

Explanation:

When selecting countermeasures, the most important factor is the overall risk posed to the asset or operation. This includes both the likelihood of a threat and the potential impact. Cost, criticality, and probability are components of the risk equation but are not stand-alone decision criteria.

A (Cost) is important for feasibility but follows risk evaluation.

B (Probability) and C (Criticality) contribute to risk but don't outweigh it individually.

NEW QUESTION # 51

In lens selection, the most important factor in determining the relative magnification of an object is the:

- A. Image device
- B. Lens format
- C. Image format
- **D. Focal length**

Answer: D

Explanation:

Focal length is the primary factor in determining the magnification and field of view in a camera lens. A longer focal length results in a narrower field of view and greater magnification of distant objects.

Conversely, a shorter focal length gives a wider field of view with less magnification.

A (Image device) and B/C (Lens or image format) influence compatibility and image quality, but do not directly affect magnification.

NEW QUESTION # 52

_____ has been defined as the impact of a loss as measured in dollars.

- **A. Criticality**
- B. Immorality
- C. Corruptness
- D. Loss reserves

Answer: A

Explanation:

In security and risk management, criticality refers to the importance or impact of a loss, typically measured in monetary terms. It helps determine how severely the loss of an asset, process, or system could affect operations, productivity, or safety. Understanding criticality allows security professionals to prioritize protection efforts based on potential financial and operational consequences.

NEW QUESTION # 53

A device that is designed to respond to a certain change in conditions, such as the opening of a door, movement within a room or rapid rise in heat is known as:

- A. Sending device
- B. Enunciator
- C. Sounding device
- **D. Alarm sensor**

Answer: D
