Get Success in Adobe AD0-E725 Exam Questions and Grow Your Career

Real4Prep is a wonderful study platform that contains our hearty wish for you to pass the AD0-E725 exam by our AD0-E725 exam materials. So our responsible behaviors are our instinct aim and tenet. By devoting in this area so many years, we are omnipotent to solve the problems about the AD0-E725 learning questions with stalwart confidence. And as long as you study with our AD0-E725 exam questions, you will find that our AD0-E725 learning guide is the best for the outstanding quality and high pass rate as 99% to 100%.

Adobe Commerce Developer Expert Sample Questions (Q20-Q25):

NEW QUESTION # 20
An Adobe Commerce Cloud Developer is tasked with investigating slow page loads and intermittent errors reported by a client after a recent deployment to their Pro Production environment.
Which action should the Developer use to quickly access and analyze the necessary data?

- A. Connect via SSH into each production node to review system and application logs independently for a more accurate representation of issues being logged.
- B. Access Cloud Console to review environment messages and deployment logs that took place during the previous deployment to production.
- C. Go to New Relic Log Management to access aggregated log data, allowing the analysis of application, infrastructure, CDN, and WAF errors.

Answer: C

Explanation:
In Adobe Commerce Cloud Pro Production, logs are spread across multiple nodes, so manually checking each node (A) is inefficient. The correct approach is to use New Relic Log Management, which aggregates logs from all services and nodes. This allows developers to quickly analyze application logs, infrastructure logs, CDN, and WAF errors in one place.
A is inefficient and not recommended.
C only shows deployment logs, not ongoing runtime errors.
B is correct: New Relic Log Management is the single source of truth for performance and error analysis.
Reference:
Adobe Commerce Cloud DevDocs - Log management with New Relic

NEW QUESTION # 21
A Developer connects to a Magento-Cloud CLI and creates a new branch for environment using the following Git command: git checkout -b <branch-name> The developer notices the branch is not activated and does not automatically build when changes are pushed to the remote environment.
Which solution will fix this issue?

- A. magento-cloud environment:branch <branch-name> should be used instead of Git commands.
- B. magento-cloud environment:redeploy --no-wait should be executed after branch creation.
- C. git branch -b <branch-name> should be used instead of Git checkout.

Answer: A

NEW QUESTION # 22
An Adobe Commerce Expert is tasked with configuring different pricing for products across multi-site installation. Each website requires independent control of its prices while using the same catalog data.
What is the minimum store hierarchy structure required to achieve this?

- A. Multiple websites, each with one store and at least one store view
- B. One website, one store, and multiple store views
- C. Multiple stores and a single store view for each store

Answer: A

NEW QUESTION # 23
A Developer is integrating a custom third-party gift card system into the Adobe Commerce checkout. During checkout, a customer

enters a store-bought gift card for payment, and depending on external API checks, the gift card is verified and allowed to be used on the order.
Which approach should be used for the internal processing of such functionality?

- A. Create an Adobe Commerce gift card account and manage the account using the gift card repositories.
- B. Directly subtract the gift card amount from the order, keeping no history of the discount transaction.
- C. Create a unique voucher code for each gift card usage request which grants a discount on the order's total.

Answer: C

Explanation:
The correct way to integrate external gift cards is to generate a unique discount (voucher code) that maps to the validated gift card value. This approach ensures that the transaction is recorded in Magento's discount system, preserving order and accounting integrity.
A is incorrect because Adobe Commerce gift card accounts are native to the Commerce Gift Card module and not applicable to external systems.
C is incorrect as directly subtracting amounts without transaction history violates best practices and auditability.
B is correct: mapping external validation into a voucher/discount ensures proper tracking.

Adobe Commerce DevDocs - Custom payment/discount integrations

NEW QUESTION # 24
A Developer creates daily cron jobs to automate a client's business processes, including automated stock imports via CSV files once per day. After a few days, it is noted that the cron jobs do not run daily. The Developer discovers the cron jobs are sometimes assigned a 'missed' status and do not execute, and other cron jobs become stuck during the execution time of the custom cron jobs.
Which option should the Developer use to ensure the cron jobs consistently run each day?

- A. In the execute() function, implement a lock checker to make sure the cron runs alone.
- B. Set the cron jobs to run multiple times per day instead of once daily.
- C. Implement a custom group for the cron jobs in the crontab.xml.

Answer: C

NEW QUESTION # 25
......

Time is flying and the exam date is coming along, which is sort of intimidating considering your status of review process. The more efficient the materials you get, the higher standard you will be among competitors. So, our high quality and high accuracy rate AD0-E725 Training Materials are your ideal choice this time. With the high pass rate as 98% to 100%, i can say that you won't find the better AD0-E725 exam questions than ours. And our AD0-E725 study guide is offered by a charming price.

Exam AD0-E725 Success: https://www.real4prep.com/AD0-E725-exam.html
