Adobe AD0-E725 Valid Exam Vce & AD0-E725 Guide Torrent

Prep4cram AD0-E725 latest training guide covers all the main content which will be tested in the actual exam. Even if, there may occur few new questions, you still do not worry, because the content of Adobe AD0-E725 latest free pdf will teach you the applicable knowledge which will help you solve the problem. So please rest assured to choose AD0-E725 Valid Test Questions vce, high pass rate will bring you high score.

Adobe Commerce Developer Expert Sample Questions (Q30-Q35):

NEW QUESTION # 30

A new critical security vulnerability is found on Adobe Commerce Cloud. The successful exploitation may lead to arbitrary code execution, so the Developer must apply a security patch file given by Adobe as soon as possible to ensure system security. How should the Developer apply the security patch on Adobe Commerce hosted on cloud infrastructure according to best practices?

- A. Apply a security patch using composer.json.
- **B. Copy a security patch to m2-hotfixes directory.**
- C. Upgrade Adobe Commerce to the latest security patch release.

Answer: B

Explanation:

On Adobe Commerce Cloud, the best practice for urgent fixes is to place the patch file into the m2-hotfixes directory at the root of the project. Patches in this directory are automatically applied during the Cloud build and deploy process.

Option A (composer.json) applies to composer-based patches in on-premise installations, not the recommended cloud approach.

Option C (upgrade to latest release) is ideal for long-term but not feasible for urgent fixes that must be applied immediately.

NEW QUESTION # 31

An Adobe Commerce Developer is tasked with adding a custom tax calculation to the checkout process. In addition to core tax calculations, a legacy code extending core tax calculation classes is also found. The Developer wants to utilize Magento's dependency injection system effectively to meet requirements, ensuring the solution works without modifying the existing core and legacy classes.

What should the Developer implement to achieve this?

- A. Preferences
- B. Constructor arguments
- **C. Virtual types**

Answer: C

NEW QUESTION # 32

A Developer needs to subscribe to the customer_register_success event.

How should the observer be declared in the module?

- **A. Declare in etc/events.xml:**

```
<event name="customer_register_success">
<observer name="vendor_module_customer_register_observer" instance="
Vendor\Module\Observer\CustomerRegisterSuccess" />
</event>
```

- B. Declare in etc/observer.xml:

```
<observer name="vendor_module_customer_register_observer">
<event name="customer_register_success" instance="
Vendor\Module\Observer\CustomerRegisterSuccess" />
</observer>
```
- C. Declare in etc/events.xml:

```
<observer name="customer_register_success">
<event name="vendor_module_customer_register_observer" instance="
Vendor\Module\Observer\CustomerRegisterSuccess" />
</observer>
```

Answer: A

NEW QUESTION # 33

A Developer is tasked with extending the GraphQL capabilities of a client's Adobe Commerce project by adding custom attributes to the product query.

Which step should the Developer take to correctly implement this GraphQL customization?

- **A. Extend the ProductInterface by creating a schema.graphqls file in the custom module's etc directory.**
- B. Add new attributes in the Adobe Commerce admin panel to reflect the additions.
- C. Add aroundGetList and afterGetList plugins to the ProductRepositoryInterface to reflect the new attributes.

Answer: A

NEW QUESTION # 34

A Developer creates daily cron jobs to automate a client's business processes, including automated stock imports via CSV files once per day. After a few days, it is noted that the cron jobs do not run daily. The Developer discovers the cron jobs are sometimes assigned a missed status and do not execute, and other cron jobs become stuck during the execution time of the custom cron jobs.

Which option should the Developer use to ensure the cron jobs consistently run each day?

- **A. Implement a custom group for the cron jobs in the crontab.xml.**
- B. In the execute() function, implement a lock checker to make sure the cron runs alone.
- C. Set the cron jobs to run multiple times per day instead of once daily.

Answer: A

Explanation:

The correct solution is to create a custom cron group.

By default, Magento cron jobs run in shared groups (default, index, etc.). If a heavy/long-running job blocks the queue, other jobs in the same group may become delayed or marked as "missed." By assigning heavy processes (such as stock imports) to a dedicated group, developers ensure that the job is managed separately, avoiding conflicts.

Option B does not solve the root scheduling issue; it just increases runs.

Option C (lock checker) prevents overlaps but does not prevent the missed status caused by shared cron queue congestion.
