NEW QUESTION # 185
What does adding missed labels help improve in UiPath Communications Mining?

- A. Label precision and recall.
- B. Increases the taxonomy coverage.
- C. Label bias warnings.
- D. Increases data security.

Answer: A

Explanation:
Adding missed labels helps improve the label precision and recall in UiPath Communications Mining.
Precision is the percentage of correctly labeled verbatims out of all the verbatims that have the label applied, while recall is the percentage of correctly labeled verbatims out of all the verbatims that should have the label applied. By adding missed labels, you are increasing the recall of the label, as you are reducing the number of false negatives (verbatims that should have the label but do not). This also improves the precision of the label, as you are reducing the noise in the data and making the label more informative and consistent. Adding missed labels is one of the recommended actions that the platform suggests to improve the model rating and performance of the labels.

* It is grouped alongside "Step Into" and "Step Over," all part ofdebug control options.
#Use Case:
