

# 6V0-22.25퍼펙트인증덤프자료, 6V0-22.25완벽한덤프

PassTIP 에서 제공해드리는 VMware인증6V0-22.25시험덤프자료를 구입하시면 퍼펙트한 구매후 서비스를 약속드립니다. PassTIP에서 제공해드리는 덤프는 IT업계 유명인사들이 자신들의 노하우와 경험을 토대로 하여 실제 출제되는 시험문제를 연구하여 제작한 최고품질의 덤프자료입니다. VMware인증6V0-22.25시험은PassTIP 표VMware인증6V0-22.25덤프자료로 시험준비를 하시면 시험패스는 아주 간단하게 할 수 있습니다. 구매하기전 PDF버전 무료 샘플을 다운받아 공부하세요.

## VMware 6V0-22.25 시험요강:

주제	소개
주제 1	<ul style="list-style-type: none"><li>• Troubleshooting and Repairing: Covers log interpretation, real-time analytics enablement, health score analysis, and diagnosing issues including the effect of WAF on logging behavior.</li></ul>
주제 2	<ul style="list-style-type: none"><li>• Administrative and Operational Tasks: Covers day-to-day administrative tasks, specifically the process of creating and managing virtual services.</li></ul>
주제 3	<ul style="list-style-type: none"><li>• Installing, Configuring, and Setup: Covers the installation, initial configuration, and setup procedures for the Avi Load Balancer.</li></ul>
주제 4	<ul style="list-style-type: none"><li>• Performance-tuning, Optimization, Upgrades: Covers Service Engine and group capacity limits, the impact of elastic scale out, and the performance trade-offs of enabling real-time analytics and logging.</li></ul>

## 최신 6V0-22.25퍼펙트 인증덤프자료 인증시험 인기 덤프문제 다운

PassTIP VMware 6V0-22.25 덤프는VMware 6V0-22.25실제시험 변화의 기반에서 스케줄에 따라 업데이트 합니다. 만일 테스트에 어떤 변화가 생긴다면 될수록 2일간의 근무일 안에VMware 6V0-22.25 덤프를 업데이트 하여 고객들이 테스트에 성공적으로 합격 할 수 있도록 업데이트 된 버전을 구매후 서비스로 제공해드립니다. 업데이트할수 없는

상황이라면 다른 적중을 좋은 덤프로 바꿔드리거나 덤프비용을 환불해드립니다.

## 최신 VMware Professional 6V0-22.25 무료샘플문제 (Q193-Q198):

### 질문 # 193

A DevOps engineer is using an Ansible playbook to create a new HTTPS virtual service. The playbook fails with an error: "SSL Profile is required for HTTPS service port 443".

The engineer's playbook definition is shown below.

- name: Create Web VS

avi\_virtualservice:

name: vs-secure-app

services:

- port: 443

pool\_ref: /api/pool?name=pool-secure-app

vip:

- ip\_address: 10.10.10.50

What must be added to the playbook task to resolve this error?

- A. An `se_group_ref` to specify where the virtual service should be placed.
- B. An `application_profile_ref` pointing to the System-L4-Application profile.
- C. An `ssl_profile_ref` pointing to a valid SSL Profile.
- D. A `waf_policy_ref` to enable WAF on the virtual service.

정답: C

### 질문 # 194

A Security Administrator is deciding on a certificate strategy for a company's web services. The company has a mix of modern, high-performance public APIs and older internal applications with legacy clients. Which statements accurately describe the trade-offs between EC and RSA certificates in this context? (Choose 2.)

- A. RSA certificates offer stronger security than EC certificates at every key size.
- B. EC certificates are always self-signed and cannot be issued by a public CA.
- C. RSA certificates should be used for the internal applications to ensure compatibility with legacy clients.
- D. EC certificates should be used for the public APIs to minimize handshake latency.
- E. Both certificate types consume the same amount of CPU on the Avi Service Engines.

정답: C,D

### 질문 # 195

Which method does not identify why a server has been marked down by a Health Monitor?

- A. Pool > Server > Health Score icon
- B. Pool > Server > Analytics screen
- C. Virtual Service > Logs
- D. Pool > Events > Server\_Down event

정답: C

### 설명:

Avi provides several places to troubleshoot why a pool server is marked down by a health monitor. VMware Avi documentation describes server health-monitor troubleshooting through pool and server health information, including the Health Score icon, server analytics, and system events such as server-down events.

These views are intended to expose health monitor state and the reason a server failed the monitor. However, Virtual Service client logs are application traffic logs; Avi documentation specifically notes that health monitor transactions are not included when recording client traffic logs for a Virtual Service. Therefore, looking in Virtual Service > Logs does not identify why a server was marked down by a health monitor. The correct answer is Virtual Service Logs.

### 질문 # 196

An application team reports intermittent HTTP 503 "Service Unavailable" errors. An Avi administrator reviews the Virtual Service analytics and sees the following information.

- Health Score: 70
  - Performance Score: 95
  - Resource Score: 25
  - Anomaly Score: 90
  - Security Score: 100
  - Pool: app-pool-prod
  - Server `10.10.1.5`: UP
  - Server `10.10.1.6`: DOWN (Health Monitor: tcp-hm failed)
  - Server `10.10.1.7`: DOWN (Health Monitor: tcp-hm failed)
- Based on these analytics, what are the most likely causes of the user-reported errors? (Choose 2.)

- A. The remaining active server (10.10.1.5) is overloaded with traffic that would normally be distributed to three servers.
- B. There is high network latency between clients and the Service Engines.
- C. Two of the three backend servers in the pool are failing their health checks and are marked down.
- D. The application is responding slowly, causing performance degradation.
- E. The WAF policy is too restrictive and is blocking valid requests.

정답: A,C

### 질문 # 197

The "M" in N+M Elastic HA refers to which Service Engine Group parameter?

- A. Maximum number of Service Engines
- B. Maximum number of Virtual Services per Service Engine
- C. Number of buffer Service Engines
- D. Minimum scale per Virtual Service

정답: C

#### 설명:

In Avi Elastic HA N+M mode, the N value represents the minimum active scale required for a Virtual Service, while M represents additional capacity maintained for resiliency. Broadcom's Avi documentation explains that in N+M Elastic HA, M is the number of additional or buffer Service Engines that the Avi Load Balancer Controller maintains in the Service Engine Group. These buffer Service Engines provide spare capacity for failover, scale-out, and placement flexibility. This is separate from the maximum number of Service Engines in the group, which defines the upper limit of SEs that can exist. It is also separate from the maximum number of Virtual Services per Service Engine. Therefore, the "M" in N+M Elastic HA refers to the number of buffer Service Engines .

### 질문 # 198

.....

VMware 6V0-22.25 덤프는 pdf버전,테스트엔진버전, 온라인버전 세가지 버전의 파일로 되어있습니다. pdf버전은 반드시 구매하셔야 하고 테스트엔진버전과 온라인버전은 pdf버전 구매시 추가구매만 가능합니다. pdf버전은 인쇄가능하기에 출퇴근길에서도 공부가능하고 테스트엔진버전은 pc에서 작동가능한 프로그램이고 온라인버전은 pc외에 휴대폰에서도 작동가능합니다.
