Palo Alto Networks XSOAR-Engineer Best Practice & Reliable XSOAR-

## Engineer Dumps Free

Our Palo Alto Networks XSOAR-Engineer practice test software is the most distinguished source for the Palo Alto Networks XSOAR-Engineer exam all over the world because it facilitates your practice in the practical form of the XSOAR-Engineer Certification Exam. Moreover, you do not need an active internet connection to utilize Palo Alto Networks XSOAR Engineer practice exam software.

### Palo Alto Networks XSOAR Engineer Sample Questions (Q55-Q60):

#### NEW QUESTION # 55

An engineer wants to customize the regex for the default IP indicator type. How can this change be implemented?

- **A. Create a new indicator type and disable the built-in IP indicator**
- B. Delete the default IP indicator
- C. Add a new server configuration key that will overwrite the default regex of the IP indicator
- D. Edit the regex of the default IP Indicator

**Answer: A**

Explanation:

Reference: <https://docs.paloaltonetworks.com/cortex/cortex-xsoar/6-0/cortex-xsoar-admin/manage-indicators/understand-indicators/indicator-types/indicator-type-profile.html>

#### NEW QUESTION # 56

You can customize most aspects of the incident layout, including which three of the following? (Choose three.)

- **A. Which dashboard settings are applied**
- **B. The information and how is it displayed**
- C. Which users have permissions to view the tabs
- D. Which roles have permissions to view the tabs
- **E. Which tabs appear and in which order**

**Answer: A,B,E**

#### NEW QUESTION # 57

By default, which components does an XSOAR implementation include?

- A. All in one server
- B. Application server, distributed DB server, Backup server
- C. XSOAR server, XSOAR engine
- **D. Application server, distributed DB server**

**Answer: D**

Explanation:

Reference: <https://docs.paloaltonetworks.com/cortex/cortex-xsoar/6-0/cortex-xsoar-admin/installation/install-demisto-on-a-physical-or-virtual-server.html>

#### NEW QUESTION # 58

What can be used as integration parameters?

- A. User-password, csv file, query
- **B. URL, API key, port**
- C. Token, query, playbook
- D. URL, certificate, image

**Answer: B**

### NEW QUESTION # 59

Two feed integrations with the same source reliability (B - Usually reliable) fetch the same indicator with the following verdicts:

Integration A - Malicious

Integration B - Benign

Indicator data from Integration B was fetched after Integration A.

What will be the values of the fields associated with the indicator?.

- A. Verdict: Benign  
Other Fields: Values from Integration A.
- B. Verdict: Malicious  
Other Fields: Values from Integration B.
- C. Verdict: Benign  
Other Fields: Values from Integration B.
- D. Verdict: Malicious  
Other Fields: Values from Integration A.

**Answer: A**

Explanation:

According to the Threat Intelligence section of the XSOAR Admin Guide, indicator verdict resolution uses two key rules:

\* If multiple sources have different reliability levels, the verdict from the highest-reliability source wins.

\* If multiple sources share the same reliability, XSOAR selects the "worst" (most severe) verdict among them.

Because both integrations have equal reliability (B - Usually reliable), XSOAR selects the more severe verdict. "Malicious" is more severe than "Benign," so the resulting indicator verdict will be Malicious.

However, indicator field values follow a different rule:

When multiple sources share the same reliability score, the most recently updated source overwrites the indicator fields, except for the verdict field.

Integration B updated the indicator after Integration A, so its field values overwrite Integration A's fields. But its verdict does not override the malicious verdict because severity resolution rules take precedence.

Therefore, the correct combined logic yields:

\* Verdict: Benign? No # Because Malicious is the highest severity.

\* Other Fields: From the most recently updated feed # Integration B.

But the verdict is strictly the "worst" verdict, so:

Correct answer: C.

### NEW QUESTION # 60

.....

Have similar features to the desktop-based exam simulator Contains actual Palo Alto Networks XSOAR-Engineer practice test that will help you grasp every topic Compatible with every operating system Does not require any special plugins to operate. Creates a XSOAR-Engineer Exam atmosphere making candidates more confident. Keeps track of your progress with self-analysis and Points out mistakes at the end of every attempt.
