EC-COUNCIL EC Council Certified Incident Handler (ECIH v3) Sample Questions (Q177-Q182):

NEW QUESTION # 177

Clark, a professional hacker, successfully exploited the web application of a target organization by tampering the form and parameter values. In result, Clark gained access to the information assets of the organization. Identify the vulnerability in the web application exploited by the attacker.

- A. Security misconfiguration
- **B. SQL injection**
- C. Broken access control
- D. Sensitive data exposure

Answer: B

NEW QUESTION # 178

One of the main objectives of incident management is to prevent incidents and attacks by tightening the physical security of the system or infrastructure. According to CERT's incident management process, which stage focuses on implementing infrastructure improvements resulting from postmortem reviews or other process improvement mechanisms?

- A. Protection
- B. Preparation
- C. Detection
- D. Triage

Answer: A

NEW QUESTION # 179

Which of the following is not called volatile data?

- A. Creation dates of files
- B. State of the network interface
- C. Open sockets or open ports
- D. The date and time of the system

Answer: A

Explanation:

Volatile data refers to information that is stored temporarily and is lost when a computer is turned off or restarted, such as RAM contents, including open sockets and open ports, the date and time of the system, and the state of the network interface. The creation dates of files, however, are considered non-volatile data because they are preserved on the hard drive and remain available after the system is restarted or turned off.

Non-volatile data is stored on persistent storage mediums like hard drives, SSDs, and magnetic tapes, where it remains until it is deleted or overwritten. References: The Incident Handler (ECIH v3) certification emphasizes the distinction between volatile and non-volatile data in the context of digital forensics and incident response, highlighting the importance of understanding what data may be lost upon system shutdown and what data persists.

NEW QUESTION # 180

Alice is a disgruntled employee. She decided to acquire critical information from her organization for financial benefit. To accomplish this, Alice started running a virtual machine on the same physical host as her victim's virtual machine and took advantage of shared physical resources (processor cache) to steal data (cryptographic key/plaintext secrets) from the victim machine. Identify the type of attack Alice is performing in the above scenario.

- A. Service hijacking
- B. Side channel attack
- C. Man-in-the-cloud attack
- D. SQL injection attack

Answer: B

NEW QUESTION # 181

Stenley is an incident handler working for Texa Corp. located in the United States. With the growing concern of increasing emails from outside the organization, Stenley was asked to take appropriate actions to keep the security of the organization intact. In the process of detecting and containing malicious emails, Stenley was asked to check the validity of the emails received by employees. Identify the tools he can use to accomplish the given task.

- A. Email Dossier
- B. PointofMail
- C. PoliteMail
- D. EventLog Analyzer

Answer: A

NEW QUESTION # 182

.....
