Actual4Labs regularly updates its PDF file to ensure that its readers have access to the updated questions.

## CompTIA Cloud+ (2025) Sample Questions (Q183-Q188):

### NEW QUESTION # 183

A company recently migrated to a public cloud provider. The company's computer incident response team needs to configure native cloud services for detailed logging. Which of the following should the team implement on each cloud service to support root cause analysis of past events? (Select two).

- A. Log retention
- B. Log aggregation
- C. Encryption
- D. Log rotation
- E. Hashing
- F. Tracing

**Answer: A,B**

Explanation:

For detailed logging to support root cause analysis of past events, the team should implement log retention to ensure logs are kept for the necessary amount of time and log aggregation to compile logs from various sources for easier analysis and correlation.

### NEW QUESTION # 184

A cloud service provider just launched a new serverless service that is compliant with all security regulations. A company deployed its code using the service, and the company's application was hacked due to leaked credentials. Which of the following is responsible?

- A. Cloud service provider
- B. Code repository
- C. Hacker
- D. Customer

**Answer: D**

Explanation:

Comprehensive and Detailed Step-by-Step

A . Customer: Under the shared responsibility model, customers are responsible for securing their code and credentials in cloud environments.

B . Cloud service provider: Responsible for securing the underlying infrastructure, not customer-deployed applications or credentials.

C . Hacker: Exploited the breach but isn't directly responsible for security lapses.

D . Code repository: Doesn't inherently cause the issue unless mismanaged by the customer.

Reference:

CompTIA Cloud+ CV0-004 Study Guide, Objective 4.2: Understand the shared responsibility model in cloud security.

### NEW QUESTION # 185

A developer is building a new application version using a CI/CD pipeline. The developer receives the following error message log when the build fails:

Which of the following is the most likely cause of this failure?

- A. Broken build pipeline
- B. Incorrect version
- C. Test case failure
- D. Dependency issue

**Answer: D**

Explanation:

The error message indicates that the 'requests' module, which is a dependency, is not found. The failure is most likely due to the 'requests' library not being installed or not included in the environment where the application is running.

### NEW QUESTION # 186

Which of the following vulnerability management concepts is best defined as the process of discovering vulnerabilities?

- **A. Identification**
- B. Remediation
- C. Scanning
- D. Assessment

**Answer: A**

Explanation:

In vulnerability management, 'Identification' is the concept best defined as the process of discovering vulnerabilities. This step is crucial as it involves detecting vulnerabilities in systems, software, and networks, which is the first step in the vulnerability management process before moving on to assessment, remediation, and reporting.

### NEW QUESTION # 187

A cloud developer needs to update a REST API endpoint to resolve a defect. When too many users attempt to call the API simultaneously, the following message is displayed:

Error: Request Timeout - Please Try Again Later

Which of the following concepts should the developer consider to resolve this error?

- A. TLS encryption
- B. Permission issues
- C. Server patch
- **D. Rate limiting**

**Answer: D**

Explanation:

To resolve the issue of a REST API endpoint timing out when too many users attempt to call the API simultaneously, the developer should consider implementing rate limiting. Rate limiting controls the number of requests a user can submit in a given amount of time, preventing overuse of the API resources and ensuring availability for all users.
