Drupal-Site-Builder Vorbereitungsfragen - Drupal-Site-Builder Schulungsangebot

Sind Sie ein IT-Mann? Haben Sie sich an der populären IT-Zertifizierungsprüfung beteiligt? Wenn ja, würde ich Ihnen sagen, dass Sie wirklich glücklich sind. Unsere Schulungsunterlagen zur Acquia Drupal-Site-Builder Zertifizierungsprüfung von Pass4Test werden Ihnen helfen, die Acquia Drupal-Site-Builder Prüfung 100% zu bestehen. Das ist eine echte Nachricht. Wollen Sie Fortschritte in der IT-Branche machen, wählen Sie doch Pass4Test. Unsere Acquia Drupal-Site-Builder Dumps können Ihnen zum Bestehen allen Zertifizierungsprüfungen verhelfen. Sie sind außerdem billig. Wenn Sie nicht glauben, gucken Sie mal und Sie werden das Wissen.

Acquia Certified Drupal Site Builder Exam for Drupal 10, 11 Drupal-Site-Builder Prüfungsfragen mit Lösungen (Q28-Q33):

28. Frage

The development team does monthly releases to the production system. The deployment lasts for an hour.

During the deployment time, the site is put into maintenance mode. You want a certain set of users to be able to access the site during maintenance mode as well.

How do you accomplish this?

- A. Create a new role, assign users to the role. Go to Configuration # Development # Maintenance mode and select role to allow access
- B. Only administrators can access the site during maintenance mode

- C. Create a new role, assign users to the role and provide permission "Use the site in maintenance mode" to new role
- D. Under permissions page, provide permission "Administer site" to required users

Antwort: C

Begründung:

In Drupal 10 and Drupal 11, access to the site during maintenance mode is controlled through a specific permission rather than a configuration setting tied directly to roles on the maintenance mode page. The correct approach is to create a role and grant it the permission "Use the site in maintenance mode." Users assigned this role will be able to bypass the maintenance mode restriction and access the site while it is offline for regular visitors.

Option C reflects this exact mechanism and aligns with Drupal core's permission-based access control system. Drupal uses roles and permissions extensively to manage access, and maintenance mode is no exception.

Option A is incorrect because access is not limited strictly to administrators; it depends on permissions.

Option B is incorrect because the Maintenance mode configuration page does not provide role selection for access-this is a common misconception. Option D is also incorrect because granting "Administer site" gives excessive privileges and is not required for maintenance mode access; it violates the principle of least privilege.

Therefore, assigning the "Use the site in maintenance mode" permission is the correct, secure, and Drupal- recommended solution.

29. Frage

You wish to display the "Recent content" block in the sidebar region on all the article pages only. The block should be hidden on all other pages.

How do you accomplish this?

- A. In the Block layout settings, add the Recent content block to the Sidebar section and set the block to be visible for the "Article" Content type.
- B. Add the Recent content block to all pages, and hide it from non-Article pages using CSS.
- C. Edit Article Content type and check the "show recent content" option.
- D. Check the "show recent content" option in the site branding block, and set it to be visible only for Article Content type.

Antwort: A

Begründung:

Drupal 10 and Drupal 11 provide block visibility conditions that allow administrators to control where blocks appear. According to Drupal's block system documentation, when placing a block through Structure # Block layout , you can configure visibility based on content types, pages, roles, or request paths .

To meet the requirement of showing the "Recent content" block only on Article pages, the correct approach is to place the block in the Sidebar region and configure its visibility condition to Content types # Article . This ensures the block is displayed only when viewing nodes of the Article content type and hidden elsewhere.

Option A is incorrect because using CSS to hide blocks is not a proper Drupal configuration and still renders the block unnecessarily. Options B and C are invalid because Drupal does not provide such settings in content type or site branding configurations.

Thus, using block visibility settings tied to the Article content type is the correct and recommended method in Drupal site building.

30. Frage

You have installed a custom theme for your website, and you notice that the theme displays a Drupal icon as the favicon in the browser. As much as you love Drupal, you would like to remove this favicon and display your company's favicon instead.

How would you do this in the Drupal admin interface?

- A. Go to Configuration > Basic Site Settings and upload your new favicon.
- B. Go to Appearance > Settings and upload your new favicon.
- C. Place the Site branding block in the appropriate region and enable the favicon under "Toggle branding elements".
- D. Use a contributed module to inject CSS to hide the Druplicon and display your logo instead.

Antwort: B

Begründung:

In Drupal 10 and Drupal 11, favicon settings are managed at the theme level , not through general site configuration. The official Drupal theming documentation explains that each theme has its own configurable settings, including the ability to upload or replace the site's favicon.

To change the favicon, you navigate to Appearance # Settings (or specifically the active theme's settings page), where you will find an option to upload a custom favicon or use the default. This allows you to replace the default Drupal icon (Druplicon) with your organization's icon.

Option A is incorrect because the Site branding block controls elements like the logo and site name, not the favicon. Option C is incorrect because Basic Site Settings does not manage favicon configuration in modern Drupal versions. Option D is unnecessary and incorrect, as CSS is not used to change favicons.

Therefore, the correct and documented method is to update the favicon through the theme settings in the Appearance section, making option B correct.

31. Frage

You manage a local restaurants guide website. You are creating a page listing all the restaurants registered on your site. You've been asked to make sure that each restaurant in the list includes an image, a title, and cuisine style. When the user clicks the title or picture, the user will be taken to a detail page showing a full description of the restaurant.

Which 2 options will ensure that the listing page only contains the fields noted, without removing the description field from the detail page?

- A. Use custom display settings for the "Teaser" view mode and configure it to display only the image, title, and cuisine fields. Use the Views module to create a list of all restaurants, displaying each row as content using the "Teaser" view mode.
- B. Use the Views module to create a list of all restaurants, and make sure it displays each restaurant row as fields. Add the image, title, and cuisine fields to the view's field list.
- C. Use the Views module to create a list of all restaurants. Configure the view to hide the description field by adding a custom CSS class to its wrapper.
- D. Create a second content type called "Restaurant Overview," which only contains the image, title, and cuisine fields. Use the Views module to create a list of all of these Restaurant Overview nodes, but link their titles to their corresponding Restaurant nodes.

Antwort: A,B

Begründung:

Drupal 10 and Drupal 11 provide multiple ways to control how content is displayed without altering the underlying data. The requirement here is to show only selected fields (image, title, cuisine) in a listing, while keeping the full description available on the detail page.

Option A is correct because Views allows you to display content as fields, meaning you can explicitly choose which fields to show. This is a core feature of the Views module and is commonly used for listing pages.

Option C is also correct because Drupal supports view modes (like Teaser and Full). The documentation explains that you can configure the Teaser view mode to show only selected fields. Then, in Views, you can display content using that view mode. This approach is reusable and aligns with Drupal's display system.

Option B is incorrect because creating a duplicate content type is unnecessary and violates content modeling best practices. Option D is incorrect because hiding fields with CSS does not remove them from the rendered output and is not a proper Drupal solution. Thus, using Views fields or Teaser view mode are the correct, documented approaches.

32. Frage

What is meant by headless Drupal?

(Select 2 options)

- A. Just another phrase for "decoupled Drupal"
- B. Publishing content automatically in Drupal
- C. Exposing Drupal content to other systems such as native applications.
- D. Applying security updates automatically to Drupal installation

Antwort: A,C

Begründung:

In Drupal's official documentation, headless Drupal is described as decoupled Drupal. The documentation explains that decoupled, or headless, Drupal separates the backend content management part of Drupal from the frontend presentation layer. In this architecture, Drupal is used as a content repository and content API, while the frontend can be built with other technologies such as JavaScript frameworks or consumed by other clients. This directly supports option C. Drupal documentation also explains that this architecture allows Drupal content to be exposed to other systems and applications through APIs such as JSON:API or REST. That means Drupal can provide content to websites, mobile apps, kiosks, or other digital channels, which matches option B. The

purpose of headless Drupal is therefore not automatic updates or automatic publishing, so options A and D are not correct. So, according to Drupal 10 and Drupal 11 documentation, the correct understanding is that headless Drupal means decoupled Drupal and involves exposing Drupal-managed content to external systems or applications through APIs .

33. Frage

.....

Wenn Sie die Pass4Test Website klicken, wundern Sie sich vielleicht, dass viele Leute jedentag Pass4Test besuchen. Das ist ganz normal. Wir bieten den Kandidaten zahlreiche Schulungsunterlagen, mit denen sie die Acquia Drupal-Site-Builder Prüfung bestehen können. Das heißt, dass die Schulungsunterlagen wirklich wirksam sind. Wenn Sie die Acquia Drupal-Site-Builder Fragenkatalog kaufen wollen, verpassen Sie Pass4Test nicht. Und Sie werden sicher mit unseren Produkten zufrieden.
