Exam Integration-Architect Collection - Integration-Architect Reliable Test Practice

As we all know, respect and power is gained through knowledge or skill. The society will never welcome lazy people. Do not satisfy what you have owned. Challenge some fresh and meaningful things, and when you complete Integration-Architect Exam, you will find you have reached a broader place where you have never reach. For instance, our Integration-Architect practice torrent is the most suitable learning product for you to complete your targets.

Salesforce Integration-Architect certification is one of the most sought-after certifications in the Salesforce ecosystem. Salesforce Certified Integration Architect certification is designed to test a candidate's skills and knowledge in designing and implementing complex integrations between Salesforce and other systems. As a Salesforce Certified Integration-Architect, you will be able to design and implement scalable, efficient, and secure solutions that integrate Salesforce with other systems.

Salesforce Integration-Architect certification is a highly sought-after credential in the IT industry. Salesforce Certified Integration Architect certification is designed for professionals who have expertise in designing and implementing complex integration solutions with Salesforce. The Salesforce Integration-Architect (Salesforce Certified Integration Architect) Certification Exam is a comprehensive exam that tests the knowledge and skills of the candidates in various aspects of integration architecture such as data integration, application integration, identity and access management, and security.

Web-Based Salesforce Integration-Architect Practice Test - Compatible with All Major

If you are searching for an easy and rewarding study content to get through the Integration-Architect Exam, you are at the right place to get success. Our Integration-Architect exam questions can help you pass the exam and achieve the according certification with ease. If you study with our Integration-Architect Practice Guide for 20 to 30 hours, then you will be bound to pass the exam with confidence. And the price for our Integration-Architect training engine is quite favourable. What are you waiting for? Just come and buy it!

If you are interested in pursuing a career as a Salesforce Integration Architect, then the Salesforce Integration-Architect Exam is an essential certification to have. Salesforce Certified Integration Architect certification demonstrates to employers that you have the necessary knowledge and skills to design and implement complex Salesforce integrations. Additionally, this certification can help you stand out in a crowded job market and increase your earning potential as a Salesforce professional. Overall, the Salesforce Integration-Architect Exam is a challenging but highly rewarding certification that can help you take your Salesforce career to the next level.

Salesforce Certified Integration Architect Sample Questions (Q103-Q108):

NEW QUESTION # 103
Universal Containers (UC) uses Salesforce Service Cloud. Support agents open bank accounts on the spot.
UC's core banking system is the system of record, and all accounts opened in Salesforce must be synced in real time. Agents need to inform the customers of the newly created bank account ID, which is generated by the core banking system. Which integration pattern is recommended for this use case?

- A. Streaming API to generate PushTopic
- B. Salesforce platform event
- C. Request and Reply

Answer: C

Explanation:
The requirement for an agent to receive a newly created bank account ID in real time to inform a customer signifies a synchronous dependency. The agent cannot complete the business process until the core banking system confirms the account creation and returns the generated identifier.
The Request and Reply pattern is the appropriate recommendation for this use case. In this pattern:
* Request: Salesforce sends a synchronous callout (REST or SOAP) containing the customer's data to the core banking system.
* Wait: The Salesforce thread remains open, and the user interface typically displays a loading indicator while waiting for the external system to process the request.
* Reply: The core banking system returns the new account ID, which is then immediately displayed to the support agent in Salesforce.
Options A (Platform Events) and C (Streaming API) are asynchronous, event-driven patterns. While highly scalable, they are unsuitable for this specific "on the spot" requirement because there is no native way to force the agent's screen to wait for an asynchronous callback with the new ID. Request and Reply ensures that the agent has the necessary information to complete the customer interaction in a single, continuous flow.

NEW QUESTION # 104
Northern Trail Outfitters is creating a distributable Salesforce package for other Salesforce orgs within the company. The package needs to call into a custor Apex REST endpoint in the central org. The security team wants to ensure a specific integration account is used in the central org that they will authorize after installation of the package.
Which three items should an architect recommend to secure the integration in the package?
Choose 3 answers

- A. Create an Auth provider in the package and set the consumer key and consumer secret of the connected app in the central org.
- B. Select Start Authentication Flow on Save.
- C. Use an encrypted field to store the password that the security team enters and use password management for external orgs

and set the encryption method to TLS 1.2. Use the Auth Provider configured and select the identity type as Named Principal with OAuth 2.0 as the protocol and

- D. Create a connected app in the central org and add the callback URL of each org the package is installed in to redirect to after successful authentication.
- E. Contact Salesforce support and create a case to temporarily enable API access for managed packages.

Answer: A,B,D

NEW QUESTION # 105
A new Salesforce program has the following high-level abstract requirement: Business processes executed on Salesforce require data updates between their Internal systems and Salesforce.
Which relevant detail should an integration architect seek to specifically solve for integration architecture needs of the program?

- A. Timing aspects, real-time/near real-time (synchronous or asynchronous), batch and update frequency
- B. Integration skills, SME availability, and Program Governance details
- C. Core functional and non-functional requirements for User Experience design, Encryption needs, Community and license choices

Answer: A

Explanation:
Explanation
Timing aspects, real-time/near real-time (synchronous or asynchronous), batch and update frequency are relevant details that an integration architect should seek to specifically solve for integration architecture needs of the program. These details help to determine the appropriate integration pattern, technology, and solution for the business requirements. Core functional and non-functional requirements for User Experience design, Encryption needs, Community and license choices are important for the overall program design, but not specific to the integration architecture needs. Integration skills, SME availability, and Program Governance details are also important for the program execution, but not specific to the integration architecture needs.

NEW QUESTION # 106
An integration architect has received a request to prevent employees that leave the company from accessing data in Salesforce after they are deactivated in the company's HR system. What should the integration architect determine before recommending a solution?

- A. Data access prevention requirements, then identify frequency
- B. Inbound integration requirements, then identify frequency
- C. Data access prevention requirements, integration requirements, and system constraints

Answer: B

NEW QUESTION # 107
Northern Trail Outfitters (NTO) use Salesforce to track leads, opportunities, and to capture order details. However, Salesforce isn't the system that holds or processes orders. After the order details are captured in Salesforce, an order must be created in the remote system, which manages the orders lifecylce. The Integration Architect for the project is recommending a remote system that will subscribe to the platform event defined in Salesforce.
Which integration pattern should be used for this business use case?

- A. Request and Reply
- B. Batch Data Synchronization
- C. Remote Call In
- D. Fire and Forget

Answer: D
