問題 #175

On which security principle does virtualization have positive effects?

- A. confidentiality
- B. availability
- C. non-repudiation
- D. integrity

答案: B

解題說明:

Virtualization improves the availability of IT systems and resources by enabling features such as:

Resource optimization: Virtualization allows multiple virtual instances to share the same physical infrastructure, reducing hardware costs and increasing resource utilization.

Scalability: Virtualization enables rapid provisioning and deprovisioning of virtual instances, allowing organizations to scale up or down their IT capacity according to demand.

Disaster recovery: Virtualization facilitates backup and replication of virtual instances, allowing organizations to restore their IT systems and data in the event of a disaster or outage.

Fault tolerance: Virtualization supports high availability and load balancing of virtual instances, ensuring that IT systems and services remain operational even if one or more virtual instances fail. 問題 #176

What type of DNS record maps an IPV6 address to a domain or subdomain to another hostname?

- A. SOA
- B. MX
- C. AAAA
- D. NS

答案: C

解題說明:

An AAAA record is a type of DNS record that maps a domain name or a subdomain to an IPv6 address. IPv6 is the latest version of the Internet Protocol (IP) that uses 128-bit addresses to identify devices on the internet. An AAAA record is similar to an A record, which maps a domain name or a subdomain to an IPv4 address, but with a different format and length. An example of an AAAA record is:

example-website.com IN AAAA 2001:db8::1234

In the example above, the record is made up of the following elements:

example-website.com: The domain name or the subdomain that is mapped to an IPv6 address.

IN: The class of the record, which indicates that it is on the internet.

AAAA: The type of the record, which indicates that it is an IPv6 address record.

2001:db8::1234: The IPv6 address that is mapped to the domain name or the subdomain. The address is written in hexadecimal notation, with colons separating each 16-bit segment. Double colons (::) can be used to compress consecutive zero segments.

問題 #177

What are two functions of User and Entity Behavior Analytics (UEBA) data in Prisma Cloud CSPM? (Choose two.)

- A. Detecting and correlating anomalies
- B. Assessing severity levels
- C. Unifying cloud provider services
- D. Identifying misconfigurations

答案: A,B

解題說明:

Assessing severity levels - UEBA data helps prioritize incidents by evaluating the risk and severity based on user and entity behavior.

Detecting and correlating anomalies - UEBA continuously analyzes activity to identify abnormal behavior and correlate anomalies that may indicate insider threats or compromised accounts.

問題 #178

Organizations that transmit, process, or store payment-card information must comply with what standard?

- A. GDPR
- B. CISA
- C. PCI DSS
- D. HIPAA

答案: C

解題說明:

PCI DSS stands for Payment Card Industry Data Security Standard, which is a set of requirements intended to ensure that all companies that process, store, or transmit credit card information maintain a secure environment¹. The standard is administered by the Payment Card Industry Security Standards Council, and its use is mandated by the major card brands². PCI DSS covers 12 requirements for compliance, organized into six control objectives, such as building and maintaining a secure network and systems, protecting cardholder data, and implementing strong access control measures³. 問題 #179

Anthem server breaches disclosed Personally Identifiable Information (PII) from a number of its servers. The infiltration by hackers was attributed to which type of vulnerability?

- A. exploitation of an unpatched security vulnerability
- **B. a phishing scheme that captured a database administrator's password**
- C. access by using a third-party vendor's password
- D. an intranet-accessed contractor's system that was compromised

答案: B

解題說明:

The Anthem data breach of 2015 was caused by a phishing scheme that captured a database administrator's password. According to the U.S. Department of Health and Human Services (HHS) Office for Civil Rights (OCR), hackers sent phishing emails to an Anthem subsidiary. At least one employee responded. Attackers were able to plant malware on the company's system and gain remote access to confidential information¹. The breach exposed the electronic protected health information of almost 79 million people, including names, Social Security numbers, medical identification numbers, addresses, dates of birth, email addresses, and employment information².
