信頼的なJN0-336日本語版トレーニング & 合格スムーズJN0-336無料試験 | 権威のあるJN0-336合格体験記 Security, Specialist (JNCIS-SEC)

ここで私は明確にしたいのはTopexamのJN0-336問題集の核心価値です。Topexamの問題集は100%の合格率を持っています。TopexamのJN0-336問題集は多くのIT専門家の数年の経験の結晶で、高い価値を持っています。そのJN0-336参考資料はIT認定試験の準備に使用することができるだけでなく、自分のスキルを向上させるためのツールとして使えることもできます。そのほか、もし試験に関連する知識をより多く知りたいなら、それもあなたの望みを満たすことができます。

Juniper Security, Specialist (JNCIS-SEC) 認定 JN0-336 試験問題 (Q41-Q46):

質問 # 41

Which two statements are correct about the Junos IPS feature? (Choose two.)

- A. IPS is a standalone platform running on dedicated hardware or as a virtual device.

- B. IPS is integrated as a security service on SRX Series devices.
- C. IPS uses sandboxing to detect unknown attacks.
- D. IPS uses protocol anomaly rules to detect unknown attacks.

正解: B、D

解説:

Junos IPS is a feature that provides intrusion prevention and detection services on SRX Series devices.

It monitors network traffic and compares it against predefined signatures or custom rules to identify and block malicious or unwanted packets. Two statements that are correct about the Junos IPS feature are:

IPS is integrated as a security service on SRX Series devices: Junos IPS is not a separate platform or device, but a security service that runs on SRX Series firewalls. It can be enabled and configured as part of the security policy on the SRX Series device and applied to specific zones, interfaces, or traffic flows.

IPS uses protocol anomaly rules to detect unknown attacks: Junos IPS uses two types of rules to detect attacks: signature rules and protocol anomaly rules. Signature rules match traffic against known attack patterns or signatures and block them based on predefined actions. Protocol anomaly rules detect deviations from the expected behavior or structure of common protocols, such as TCP, UDP, ICMP, etc.

Protocol anomaly rules can help identify unknown or zero-day attacks that may not have a signature yet.

質問 # 42

Click the Exhibit button.

Which two statements describe the output shown in the exhibit? (Choose two.)

- A. Redundancy group 1 was administratively failed over.
- B. Redundancy group 1 experienced an operational failure.
- C. Node 1 is controlling traffic for redundancy group 1.
- D. Node 0 is controlling traffic for redundancy group 1.

正解: C、D

解説:

The output indicates that node1 has a priority of 200 and is marked as "Primary," which means it is currently the active node controlling traffic for redundancy group 1. The "Primary" status designates that this node is handling the traffic for the specified redundancy group.

According to the exhibit, node0 is listed with a priority of 0 and is marked as "Secondary." This status indicates that node0 is currently not controlling traffic for redundancy group 1, serving instead in a standby role ready to take over should node1 fail or become unavailable.

質問 # 43

Which two statements are true about application identification? (Choose two.)

- A. Application identification can identify nested applications that are within Layer 7.
- B. Application identification cannot identify nested applications that are within Layer 7.
- C. Application signatures are the same as IDP signatures.
- D. Application signatures are not the same as IDP signatures.

正解: A、D

解説:

Application identification is a feature that enables SRX Series devices to identify and classify network traffic based on application signatures or custom rules. Application identification can enhance security, visibility, and control over network applications.

Two statements that are true about application identification are:

Application identification can identify nested applications that are within Layer 7: Nested applications are applications that run within another application protocol, such as HTTP or SSL. For example, Facebook or YouTube are nested applications within HTTP.

Application identification can identify nested applications by inspecting the application payload and matching it against predefined or custom signatures.

Application signatures are not the same as IDP signatures: Application signatures are patterns of bytes or strings that uniquely identify

an application protocol or a nested application. IDP signatures are patterns of bytes or strings that indicate an attack or an exploit against a vulnerability. Application signatures are used for application identification and classification, while IDP signatures are used for intrusion detection and prevention.

質問 # 44

When a security policy is modified, which statement is correct about the default behavior for active sessions allowed by that policy?

- A. The active sessions allowed by the policy will be dropped.
- B. Only policy changes that involve modification of the application will cause the active sessions affected by the change to be dropped.
- C. Only policy changes that involve modification of the action field will cause the active sessions affected by the change to be dropped.
- **D. The active sessions allowed by the policy will continue unchanged.**

正解: D

解説:

When you modify a security policy on the SRX Series device, the default behavior is that the existing sessions that match the policy will continue unchanged. This means that the policy modification will only affect new sessions that are initiated after the change. However, you can change this behavior by using the clear-policy-session command, which will clear all the sessions that match the modified policy and force them to re-evaluate the new policy. 質問 # 45

Which two statements are correct about SSL proxy server protection? (Choose two.)

- A. The servers must be configured to use the SSL proxy function on the SRX Series device.
- B. You must import the root CA on the servers.
- **C. You must load the server certificates on the SRX Series device.**
- **D. You do not need to configure the servers to use the SSL proxy the function on the SRX Series device.**

正解: C、D

解説:

When using SSL proxy, the servers themselves do not require any special configuration to utilize the SSL proxy function on the SRX device. The SSL proxy operates transparently, intercepting and decrypting SSL/TLS traffic before it reaches the servers. For the SSL proxy to function effectively, especially in server protection mode where it impersonates the server to the client, it is necessary to load the server's certificates onto the SRX device. This allows the SRX to establish a trusted connection with the client using the server's credentials.

質問 # 46

.....

この競争が激しい社会では、Topexamはたくさんの受験生の大好評を博するのは我々はいつも受験生の立場で試験ソフトを開発するからです。例えば、我々のよく発売されているJuniperのJN0-336試験ソフトは大量の試験問題への研究によって作れることです。試験に失敗したら全額で返金するという承諾があるとは言え、弊社の商品を利用したほとんどの受験生は試験に合格しました。

JN0-336無料試験: https://www.topexam.jp/JN0-336_shiken.html

なぜならば、普通の職員にとって、JN0-336無料試験 - Security, Specialist (JNCIS-SEC)資格証明書があるのは肝心の指標であると言えます、私たちはJN0-336問題集参考書で試験100%合格を保証します、弊社のJN0-336テストトレントは認定エキスパートを使用し、質問と回答は実際の試験に基づいて入念に選択されます、Juniper JN0-336日本語版トレーニング 事実、あなたが学ぶことを決心したなら、何もあなたを止めることはできません、もし我々のJN0-336テスト問題集参考書を使用するなら、彼らは最初の試みで試験に合格し、認定を取得します、Juniper JN0-336日本語版トレーニング あなたは年を取っているかもしれませんが、無限の学習の精神は古く

アデライーデの言うように、本当はリーゼロッテのためにいろいろと社交界デビューの準備をしたかったのだJN0-336、性的な快感を得ると、そこから濃厚な香りを漂わせる分泌液が出て、アルファ自身を受け止める準備が整う、なぜならば、普通の職員にとって、Security, Specialist (JNCIS-SEC)資格証明書があるのは肝心の指標であると言えます。

私たちはJN0-336問題集参考書で試験100%合格を保証します、弊社のJN0-336テストトレントは認定エキスパートを使用し、質問と回答は実際の試験に基づいて入念に選択されます、事実、あなたが学ぶことを決心したなら、何もあなたを止めることはできません！
