## WGU Cloud-Deployment-and-Operations Clear Exam - Certification Cloud-Deployment-and-Operations Dump

Comfortable life will demoralize and paralyze you one day. So you must involve yourself in meaningful experience to motivate yourself. For example, our Cloud-Deployment-and-Operations study materials perhaps can become your new attempt. In fact, learning our Cloud-Deployment-and-Operations learning quiz is a good way to inspire your spirits. Not only that you can pass the exam and gain the according Cloud-Deployment-and-Operations certification but also you can learn a lot of knowledge and skills on the subject.

### WGU Cloud Deployment and Operations Sample Questions (Q52-Q57):

#### NEW QUESTION # 52

(What can AWS Config directly invoke to cause remediation of findings?)

- A. CloudWatch alarm
- B. Control Tower guardrail
- C. Lambda function
- D. Systems Manager document

**Answer: C**

Explanation:

AWS Config can directly invoke an AWS Lambda function to cause remediation of findings by triggering automated responses to configuration changes or non-compliant resources. This integration enables real-time corrective actions. The WGU Cloud Deployment and Operations Study Guide (Section 6.1, AWS Config) states, "AWS Config can invoke a Lambda function as a remediation action, allowing automated fixes for non-compliant resources (e.g., terminating unauthorized instances)." Control Tower guardrails, CloudWatch alarms, and Systems Manager documents are not directly invoked by Config for this purpose.

#### NEW QUESTION # 53

(A cloud engineer needs to notify the response team whenever a high-security web server responds with a 403 Forbidden error. Which two steps can enable this functionality? Choose 2 answers.)

- A. Bind a Lambda function to an Apache process
- B. Send alarms from the Lambda function using Amazon SQS
- C. Define a metric filter for Apache logs in CloudWatch
- D. Create an alarm for the metric filter to deliver alerts using Amazon SNS

**Answer: C,D**

Explanation:

To notify a response team when a high-security web server returns a 403 Forbidden error, two key steps are required. First, define a metric filter for Apache logs in CloudWatch to detect the 403 error code within the log data. This involves setting up a filter pattern to match "403" in the Apache access logs. Second, create an alarm for the metric filter and configure it to deliver alerts using Amazon SNS, which supports email or other notifications to the response team. The WGU Cloud Deployment and Operations Study Guide (Section 4.2, CloudWatch Logs and Alarms) confirms that metric filters and SNS-integrated alarms are the standard approach for monitoring and alerting on log-based events. Options B and D are incorrect as they involve unnecessary or unsupported configurations (e.g., binding Lambda to Apache or using SQS for alarms).

#### NEW QUESTION # 54

(An organization uses CloudFormation to deploy AWS infrastructure. The templates are built in JSON and deploy EC2 instances across multiple regions. Which solution should be used to set values in the template based on region-specific AMI IDs?)

- A. Mappings
- B. Outputs
- C. Resources
- D. WaitCondition

**Answer: A**

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

The Mappings section in a CloudFormation template should be used to set values based on region-specific AMI IDs. Mappings allow the template to define a lookup table that associates regions with corresponding AMI IDs, enabling dynamic selection during stack creation across multiple regions. The WGU Cloud Deployment and Operations Study Guide (Section 5.3, CloudFormation Mappings) states, "The Mappings section enables region-specific configurations, such as mapping AMI IDs to regions (e.g., 'us-east-1': 'ami-123456'), ensuring the correct AMI is used based on the deployment region." Outputs, WaitCondition, and Resources do not provide this mapping functionality.

#### NEW QUESTION # 55

(What is the advantage of maximizing the time to live of the cache in CloudFront?)

- A. Improve a disaster recovery plan
- B. Facilitate a high number of requests
- C. Minimize requests to the origin
- D. Improve security measures

**Answer: C**

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

Maximizing the time to live (TTL) of the cache in Amazon CloudFront reduces the frequency of requests to the origin server by serving content from edge locations for a longer period, lowering latency and costs. The WGU Cloud Deployment and Operations Study Guide (Section 4.4, CloudFront Caching) states, "A higher TTL in CloudFront caching minimizes origin requests by keeping objects in edge caches longer, reducing load on the origin server and optimizing performance and cost." Facilitating high request volumes, improving disaster recovery, and enhancing security are not primary benefits of maximizing TTL.

#### NEW QUESTION # 56

(What is the role of AWS Trusted Advisor?)

- A. It provides recommendations on patches to be performed on resources.
- B. It provides an assessment on unused IAM roles.
- C. It provides recommendations to help follow AWS best practices.
- D. It provides a holistic overview of the health of architecture.

**Answer: C**

Explanation:

AWS Trusted Advisor provides recommendations to help follow AWS best practices, analyzing the environment for cost optimization, security, performance, and fault tolerance. It offers actionable insights to improve resource usage. The WGU Cloud Deployment and Operations Study Guide (Section 6.4, Trusted Advisor) states, "Trusted Advisor evaluates your AWS environment against best practices, providing recommendations in categories like cost optimization and security (e.g., enabling MFA or removing unused resources)." Options A, B, and D overstate or misrepresent its role, as it does not focus solely on unused IAM roles, holistic health overviews, or patch recommendations.

#### NEW QUESTION # 57

.....

On the one thing, our company has employed a lot of leading experts in the field to compile the Cloud-Deployment-and-Operations exam torrents, so you can definitely feel rest assured about the high quality of our Cloud-Deployment-and-Operations question torrents. On the other thing, the pass rate among our customers who prepared the exam under the guidance of our Cloud-Deployment-and-Operations Study Materials has reached as high as 98% to 100%. What's more, you will have more opportunities to get promotion as well as a pay raise in the near future after using our Cloud-Deployment-and-Operations question torrents since you are sure to get the Cloud-Deployment-and-Operations certification.
