

Zscaler ZDTE Exam Syllabus - ZDTE Exam Registration

P.S. Free 2026 Zscaler ZDTE dumps are available on Google Drive shared by Real4exams: <https://drive.google.com/open?id=1Sc1IXQMUBOLvWgV-5QiroYI142K4WIIS>

In order to meet different needs of our customers, we offer you three versions of ZDTE study materials for you. Each version has its own advantages, and you can choose the most suitable one according to your own needs. ZDTE PDF version is printable, and if you like paper one, you can choose this version. ZDTE soft test engine can simulate the real exam environment, and you can build your confidence if you choose this version. ZDTE Online test engine can practice offline and can record the training process, if you have the needs like this, you can choose this version.

Whatever may be the reason to leave your job, if you have made up your mind, there is no going back. By getting the Zscaler ZDTE Certification, you can avoid thinking about negative things, instead, you can focus on the positive and bright side of taking this step and find a new skill set to improve your chances of getting your dream job.

Pass ZDTE Exam Confidently with Real4exams Real Dumps

For candidates who are searching for ZDTE training materials for the exam, the quality of the ZDTE exam dumps must be your first concern. Our ZDTE exam materials can reach this requirement. With a professional team to collect the first-hand information of the exam, we can ensure you that the ZDTE Exam Dumps you receive are the latest information for the exam. Moreover, we also pass guarantee and money back guarantee, if you fail to pass the exam, we will refund your money, and no other questions will be asked.

Zscaler ZDTE Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• Data Protection Services: Explains how sensitive data is secured, monitored, and managed within the platform.
Topic 2	<ul style="list-style-type: none">• Zscaler Architecture: Focuses on the overall design, components, and deployment models of the Zscaler platform.
Topic 3	<ul style="list-style-type: none">• Access Control Services: Focuses on controlling and enforcing user access to applications and resources.
Topic 4	<ul style="list-style-type: none">• Zscaler Digital Experience: Covers monitoring and optimizing user experience across applications and network connections.
Topic 5	<ul style="list-style-type: none">• Zscaler for Users - Engineer Overview: Covers the foundational understanding of Zscaler services from a user perspective and the engineer's role in managing them.
Topic 6	<ul style="list-style-type: none">• Cyberthreat Protection Services: Covers mechanisms for detecting, preventing, and mitigating cyber threats in real time.
Topic 7	<ul style="list-style-type: none">• Identify Services: Explains how user identities are managed and integrated within Zscaler services.
Topic 8	<ul style="list-style-type: none">• Platform Services: Details the core platform functionalities that enable security, scalability, and reliability.
Topic 9	<ul style="list-style-type: none">• Risk Management: Focuses on identifying, assessing, and mitigating risks to users and organizational assets.

Zscaler Digital Transformation Engineer Sample Questions (Q56-Q61):

NEW QUESTION # 56

The Zscaler for Users - Engineer (EDU-202) learning path consists of various solutions covered in eleven courses. Which of the following topics is out of scope for the Zscaler for Users - Engineer learning path?

- A. In-depth overview of Zscaler's architecture platform, including its global scale, additional capabilities, and API infrastructure.
- B. Configuration of ZDX for applications, call quality monitoring, probes, diagnostics, alerts, and role-based administration to ensure effective SaaS and web application monitoring.
- C. Enabling versions to control which version (if any) of Zscaler Client Connector is available when end users manually update the app or when you configure automatic app updates.
- D. Exploring Intrusion Prevention System, DNS Control, Tenant Restrictions, and secure application segmentation.

Answer: C

Explanation:

Official EDU-202 materials describe the Engineer path as focusing on advanced architecture, connectivity, platform, access control, cyberthreat protection, data protection, risk management, ZDX, and Zero Trust Automation. The published learning outcomes explicitly include: discussing the architecture of the Zscaler platform and its API infrastructure; configuring advanced connectivity options; and configuring advanced cybersecurity services and Zscaler Digital Experience (ZDX)-including application monitoring, call quality, probes, diagnostics, alerts, and role-based administration. These map directly to options A, C, and D, which align to Zscaler Architecture, Cyberthreat/Access Control Services (IPS, DNS Control, Tenant Restrictions, segmentation), and ZDX content in the EDU-202 outline.

By contrast, Client Connector App Store "version enablement" and controlling which build is available when users manually or automatically update the app is documented as an administration task in the Client Connector help and is typically taught in the Essentials/Administrator (EDU-200) path, not in the Engineer path. Those materials show how to use the App Store to enable builds and control available versions, positioning it as operational client management rather than an advanced Engineer-level topic.

Consequently, option B is considered out of scope for EDU-202 in the ZDTE context.

NEW QUESTION # 57

Which statement is true about ZIA SD-WAN integrations using APIs?

- A. Locations created by the SD-WAN API integrations will not be editable in the Zscaler ZIA Admin interface.
- **B. You must enter the "SD-WAN Partner Key" under Administration > Cloud Service API Key Management.**
- C. SD-WAN API integrations can support both GRE and IPsec tunnel types.
- D. The SD-WAN partner must send an API key and credentials to the Zscaler administrator.

Answer: B

Explanation:

For SD-WAN API integrations with Zscaler Internet Access (ZIA), the control point for establishing trust and enabling automation is the Cloud Service API configuration within the ZIA admin portal. As documented in Zscaler's SD-WAN and Cloud Service API workflow, the ZIA administrator navigates to the Cloud Service API (under Administration) and configures the SD-WAN integration by generating and managing the SD-WAN Partner Key there. This key is then used by the SD-WAN orchestrator or controller to authenticate against Zscaler's APIs and to automate the creation of locations and tunnels.

The key is not provided by the SD-WAN partner; rather, it is created and controlled by the customer's ZIA admin, which makes option D incorrect. Locations and tunnels created via the integration remain visible and generally manageable within the ZIA admin interface, so option B is incorrect. While SD-WAN integrations can automate both GRE and IPsec tunnels in many deployments, that behavior depends on the specific SD-WAN vendor and design, so the blanket statement in option A is not the definitive, document-aligned fact being tested.

NEW QUESTION # 58

Which connectivity service provides branches, on-premises data centers, and public clouds with fast and reliable internet access while enabling private applications with a direct-to-cloud architecture?

- A. Zscaler Privileged Remote Access
- B. Zscaler App Connector
- **C. Zscaler Zero Trust SD-WAN**
- D. Zscaler Browser Access

Answer: C

Explanation:

Zscaler Zero Trust SD-WAN is specifically designed to give branches, on-premises data centers, and workloads running in public clouds fast, reliable, and secure access to the internet and private applications using a direct-to-cloud architecture. In the Zscaler Digital Transformation Engineer curriculum, this service is positioned as the connectivity foundation that replaces legacy hub-and-spoke MPLS and VPN designs with cloud-delivered Zero Trust connectivity.

Instead of backhauling traffic to central data centers, branches and sites establish lightweight, policy-driven tunnels directly to the Zscaler cloud, where security inspection and Zero Trust access decisions are applied.

This architecture reduces latency, simplifies routing, and optimizes SaaS and internet performance while simultaneously enabling secure access to private applications without exposing them to the public internet.

App Connectors (option C) are used for application-side connectivity in ZPA, not for full branch or data center connectivity.

Browser Access (option B) provides clientless application access for users, not network-level site connectivity. "Zscaler Privileged Remote Access" (option A) is not the term used for this broad connectivity service. Therefore, the only option that matches the described direct-to-cloud, multi-site connectivity role is Zscaler Zero Trust SD-WAN.

NEW QUESTION # 59

What is the primary benefit of using a Custom Zscaler Connector for SaaS Application?

- A. Broad access to all SaaS Application Tenants across Microsoft and Google
- **B. Minimum set of required credentials to access the SaaS Application Tenants**
- C. Temporary user credentials to access the SaaS Application Tenants
- D. Full administrator credentials to access the SaaS Application Tenants

Answer: B

Explanation:

In Zscaler's SaaS Security and Data Protection services, a Custom Zscaler Connector (for example, for Google Workspace,

Microsoft 365, or Salesforce) is designed so that Zscaler can connect to a specific SaaS tenant using only the minimum set of required credentials and scopes. The documentation for onboarding custom connectors explicitly emphasizes that, instead of providing full administrator rights, you authorize narrowly scoped API/OAuth permissions that allow Zscaler to scan data at rest and enforce security controls while adhering to least-privilege principles.

This minimal-credential approach reduces risk if the connector credentials are ever compromised, simplifies compliance audits, and aligns with modern security best practices. Zscaler needs just enough access to read, classify, and (where applicable) remediate or quarantine sensitive content in sanctioned SaaS applications, not broad tenant-wide admin access. Options suggesting temporary credentials, broad cross-tenant access, or full administrator rights contradict this design philosophy and the way the connectors are documented. Therefore, the primary benefit—and the key phrase you should associate with Custom Zscaler Connectors for the exam—is that they enable Zscaler to operate using a minimum set of required credentials for each SaaS Application tenant.

NEW QUESTION # 60

Which of the following capabilities is not included in the OneAPI Framework for ZIA?

- A. Malware Settings
- **B. SCIM Enable/Disable**
- C. Administrator Role Based Access
- D. Web Insights Log Retrieval

Answer: B

Explanation:

The Zscaler OneAPI framework is presented in the Engineer curriculum as the unified automation layer for ZIA, ZPA, ZDX, Client Connector, and other services. For ZIA specifically, OneAPI introduces OAuth-based authentication, fine-grained administrator role-based access control for API clients, configuration and policy management endpoints, activation controls, and access to Insights and log retrieval APIs. The course material highlights examples such as using OneAPI to manage admin roles, automate malware and advanced-threat settings, and programmatically retrieve Web Insights logs for reporting and SIEM workflows.

In contrast, SCIM (System for Cross-domain Identity Management) is described separately as an identity- provisioning standard used to synchronize users and groups from identity providers like Azure AD or Okta.

Enabling or disabling SCIM and configuring SCIM endpoints is handled through dedicated SCIM configuration, not through the OneAPI framework. While both OneAPI and SCIM are automation-related, they are distinct interfaces in the Zscaler platform. Therefore, among the options provided, SCIM Enable

/Disable is the capability that is not part of the OneAPI Framework for ZIA, whereas administrator RBAC, Web Insights log retrieval, and malware policy settings are all explicitly included.
