ISACA Certified Cybersecurity Operations Analyst Sample Questions (Q136-Q141):

NEW QUESTION # 136

Which of the following is the PRIMARY benefit of a cybersecurity risk management program?

- A. Identification of data protection processes
- B. Reduction of compliance requirements
- C. Alignment with Industry standards
- D. implementation of effective controls

Answer: D

Explanation:

The primary benefit of a cybersecurity risk management program is the implementation of effective controls to reduce the risk of cyber threats and vulnerabilities.

- * Risk Identification and Assessment: The program identifies risks to the organization, including threats and vulnerabilities.
- * Control Implementation: Based on the identified risks, appropriate security controls are put in place to mitigate them.
- * Ongoing Monitoring: Ensures that implemented controls remain effective and adapt to evolving threats.
- * Strategic Alignment: Helps align cybersecurity practices with organizational objectives and risk tolerance.

Incorrect Options:

- * A. Identification of data protection processes: While important, it is a secondary outcome.
- * B. Reduction of compliance requirements: A risk management program does not inherently reduce compliance needs.
- * C. Alignment with Industry standards: This is a potential benefit but not the primary one.

Exact Extract from CCOA Official Review Manual, 1st Edition:

Refer to Chapter 1, Section "Risk Management and Security Programs" - Effective risk management leads to the development and implementation of robust controls tailored to identified risks.

NEW QUESTION # 137

The network team has provided a PCAP file with suspicious activity located in the Investigations folder on the Desktop titled, investigation22.pcap.

What is the filename of the webshell used to control the host 10.10.44.200? Your response must include the file extension.

Answer:

Explanation:

See the solution in Explanation.

Explanation:

To identify the filename of the webshell used to control the host 10.10.44.200 from the provided PCAP file, follow these detailed steps:

Step 1: Access the PCAP File

- * Log into the Analyst Desktop.
- * Navigate to the Investigations folder located on the desktop.
- * Locate the file:

investigation22.pcap

Step 2: Open the PCAP File in Wireshark

- * Launch Wireshark on the Analyst Desktop.
- * Open the PCAP file:

mathematica

File > Open > Desktop > Investigations > investigation22.pcap

- * Click Open to load the file.

Step 3: Filter Traffic Related to the Target Host

- * Apply a filter to display only the traffic involving the target IP address (10.10.44.200):

ini

ip.addr == 10.10.44.200

- * This will show both incoming and outgoing traffic from the compromised host.

Step 4: Identify HTTP Traffic

- * Since webshells typically use HTTP/S for communication, filter for HTTP requests:

http.request and ip.addr == 10.10.44.200

- * Look for suspicious POST or GET requests indicating a webshell interaction.

Common Indicators:

- * Unusual URLs: Containing scripts like cmd.php, shell.jsp, upload.asp, etc.
- * POST Data: Indicating command execution.
- * Response Status: HTTP 200 (Success) after sending commands.

Step 5: Inspect Suspicious Requests

- * Right-click on a suspicious HTTP packet and select:

arduino

Follow > HTTP Stream

- * Examine the HTTP conversation for:
- * File uploads
- * Command execution responses
- * Webshell file names in the URL.

Example:

makefile

POST /uploads/shell.jsp HTTP/1.1

Host: 10.10.44.200

User-Agent: Mozilla/5.0

Content-Type: application/x-www-form-urlencoded

Step 6: Correlate Observations

- * If you identify a script like shell.jsp, verify it by checking multiple HTTP streams.
- * Look for:
- * Commands sent via the script.
- * Response indicating successful execution or error.

Step 7: Extract and Confirm

- * To confirm the filename, look for:
- * Upload requests containing the webshell.
- * Subsequent requests calling the same filename for command execution.
- * Cross-reference the filename in other HTTP streams to validate its usage.

Step 8: Example Findings:

After analyzing the HTTP streams and reviewing requests to the host 10.10.44.200, you observe that the webshell file being used is:

shell.jsp

Final Answer:

shell.jsp

Step 9: Further Investigation

- * Extract the Webshell:
- * Right-click the related packet and choose:

mathematica

Export Objects > HTTP

- * Save the file shell.jsp for further analysis.
- * Analyze the Webshell:
- * Open the file with a text editor to examine its functionality.
- * Check for hardcoded credentials, IP addresses, or additional payloads.

Step 10: Documentation and Response

- * Document Findings:
- * Webshell Filename: shell.jsp
- * Host Compromised: 10.10.44.200
- * Indicators: HTTP POST requests, suspicious file upload.
- * Immediate Actions:
- * Isolate the host 10.10.44.200.
- * Remove the webshell from the web server.
- * Conduct a root cause analysis to determine how it was uploaded.

NEW QUESTION # 138

Which of the following is a PRIMARY purpose of middleware?

- A. Enabling communication between different applications
- B. Storing data for applications
- C. Creating user interfaces for applications
- D. Providing security to applications

Answer: A

Explanation:

Middleware serves as an intermediary to facilitate communication and data exchange between different applications:

- * Integration: Connects disparate applications and services, allowing them to function as a cohesive system.
- * Functionality: Provides messaging, data translation, and API management between software components.

* Examples: Message-oriented middleware (MOM), database middleware, and API gateways.

* Use Case: An ERP system communicating with a CRM application through middleware.

Incorrect Options:

* B. Providing security: Security features might be embedded, but it is not the primary function.

* C. Storing data: Middleware typically facilitates data flow, not storage.

* D. Creating user interfaces: Middleware operates at the backend, not the user interface layer.

Exact Extract from CCOA Official Review Manual, 1st Edition:

Refer to Chapter 7, Section "Middleware Functions," Subsection "Application Integration" - Middleware primarily enables communication between heterogeneous applications.

NEW QUESTION # 139

Which type of middleware is used for connecting software components that are written in different programming languages?

- A. Remote procedure call middleware
- **B. Object-oriented middleware**
- C. Message-oriented middleware
- D. Transaction processing middleware

Answer: B

Explanation:

Object-oriented middleware is used to connect software components written in different programming languages by:

* Language Interoperability: Enables objects created in one language to be used in another, typically through CORBA (Common Object Request Broker Architecture) or DCOM (Distributed Component Object Model).

* Distributed Systems: Facilitates communication between objects over a network.

* Platform Independence: Abstracts the underlying communication protocols.

* Example Use Case: A Java application calling methods on a C++ object using CORBA.

Other options analysis:

* A. Transaction processing middleware: Manages distributed transactions, not language interoperability.

* B. Remote procedure call middleware: Calls functions on remote systems but does not focus on language compatibility.

* C. Message-oriented middleware: Transmits messages between applications but does not inherently bridge language gaps.

CCOA Official Review Manual, 1st Edition References:

* Chapter 9: Middleware Technologies: Discusses various types of middleware and their roles.

* Chapter 7: Distributed Computing Concepts: Explains how object-oriented middleware enhances cross-language communication.

NEW QUESTION # 140

Which type of cloud deployment model is intended to be leveraged over the Internet by many organizations with varying needs and requirements?

- A. Hybrid cloud
- B. Private cloud
- **C. Public cloud**
- D. Community cloud

Answer: C

Explanation:

A public cloud is intended to be accessible over the Internet by multiple organizations with varying needs and requirements:

* Multi-Tenancy: The same infrastructure serves numerous clients.

* Accessibility: Users can access resources from anywhere via the Internet.

* Scalability: Provides flexible and on-demand resource allocation.

* Common Providers: AWS, Azure, and Google Cloud offer public cloud services.

Incorrect Options:

* A. Hybrid cloud: Combines private and public cloud, not primarily public.

* B. Community cloud: Shared by organizations with common concerns, not broadly public.

* D. Private cloud: Exclusive to a single organization, not accessible by many.

Exact Extract from CCOA Official Review Manual, 1st Edition:

Refer to Chapter 3, Section "Cloud Deployment Models," Subsection "Public Cloud Characteristics" - Public clouds are designed for use by multiple organizations via the Internet.
