100% Pass Efficient Salesforce - Identity-and-Access-Management-Architect - Salesforce Certified Identity and Access Management Architect Official Cert Guide

We can provide you with efficient online services during the whole day, no matter what kind of problems or consultants about our Identity-and-Access-Management-Architect quiz torrent; we will spare no effort to help you overcome them sooner or later. First of all, we have professional staff with dedication to check and update out Identity-and-Access-Management-Architect exam torrent materials on a daily basis, so that you can get the latest information from our Identity-and-Access-Management-Architect Exam Torrent at any time. Besides our after-sales service engineers will be always online to give remote guidance and assistance for you if necessary. If you make a payment for our Identity-and-Access-Management-Architect test prep, you will get our study materials in 5-10 minutes and enjoy the pleasure of your materials.

Salesforce is a leading customer relationship management (CRM) platform that enables businesses to manage their customer interactions effectively. With its comprehensive set of tools and features, Salesforce has become the preferred choice of businesses across different industries. One of the key areas where Salesforce has gained a lot of traction is Identity and Access Management (IAM). Salesforce provides a comprehensive set of IAM tools that enable businesses to secure their customer data and resources effectively. To demonstrate their expertise in this area, Salesforce offers the Identity and Access Management Architect certification.

Salesforce Certified Identity and Access Management Architect certification offers a comprehensive assessment of the knowledge and competencies required to design and implement effective identity and access management solutions for Salesforce applications. Salesforce Certified Identity and Access Management Architect certification covers a range of topics, including identity management, access control, authentication, authorization, and federation.

Easily Downloadable Salesforce Identity-and-Access-Management-Architect PDF Questions File

May be you doubt the ability of our Salesforce test dump; you can download the trial of our practice questions. All Identity-and-

Access-Management-Architect exam prep created by our experienced IT workers who are specialized in the certification study guide. We checked the updating of Identity-and-Access-Management-Architect vce braindumps to make sure the preparation successful.

Salesforce Certified Identity and Access Management Architect Sample Questions (Q45-Q50):

NEW QUESTION # 45
Users logging into Salesforce are frequently prompted to verify their identity.
The identity architect is required to provide recommendations so that frequency of prompt verification can be reduced.
What should the identity architect recommend to meet the requirement?

- A. Implement multi-factor authentication for the Salesforce org.
- B. Set trusted IP ranges for the organization.
- C. Implement an single sign-on for Salesforce using an external identity provider.
- D. Implement 2FA authentication for the Salesforce org.

Answer: B

NEW QUESTION # 46
An Identity architect works for a multinational, multi-brand organization. As they work with the organization to understand their Customer Identity and Access Management requirements, the identity architect learns that the brand experience is different for each of the customer's sub-brands and each of these branded experiences must be carried through the login experience depending on which sub-brand the user is logging into.
Which solution should the architect recommend to support scalability and reduce maintenance costs, if the organization has more than 150 sub-brands?

- A. Use Audiences to customize the login experience for each sub-brand and pass an audience ID to the community during the OAuth and Security Assertion Markup Language (SAML) flows.
- B. Create a community subdomain for each sub-brand and customize the look and feel of the Login page for each community subdomain to match the brand.
- C. Assign each sub-brand a unique Experience ID and use the Experience ID to dynamically brand the login experience.
- D. Create a separate Salesforce org for each sub-brand so that each sub-brand has complete control over the user experience.

Answer: C

NEW QUESTION # 47
Universal Containers (UC) has five Salesforce orgs (UC1, UC2, UC3, UC4, UC5). of Every user that is in UC2, UC3, UC4, and UC5 is also in UC1, however not all users 65* have access to every org. Universal Containers would like to simplify the authentication process such that all Salesforce users need to remember one set of credentials. UC would like to achieve this with the least impact to cost and maintenance. What approach should an Architect recommend to UC?

- A. Purchase a third-party Identity Provider for all five Salesforce orgs to use and set up JIT user provisioning on all other orgs.
- B. Purchase a third-party Identity Provider for all five Salesforce orgs to use, but don't set up JIT user provisioning for other orgs.
- C. Configure UC1 as the Identity Provider to the other four Salesforce orgs, but don't set up JIT user provisioning for other orgs.
- D. Configure UC1 as the Identity Provider to the other four Salesforce orgs and set up JIT user provisioning on all other orgs.

Answer: D

Explanation:
Explanation
The best approach to simplify the authentication process and reduce cost and maintenance is to configure UC1 as the Identity Provider to the other four Salesforce orgs and set up JIT user provisioning on all other orgs. This way, users can log in to any of the five orgs using their UC1 credentials, and their user accounts will be automatically created or updated in the other orgs based on the

information from UC11. This eliminates the need to purchase a third-party Identity Provider or manually provision users in advance. The other options are not optimal for this requirement because:

Purchasing a third-party Identity Provider for all five Salesforce orgs would incur additional cost and maintenance, and would not leverage the existing user base in UC1.

Not setting up JIT user provisioning for other orgs would require manually creating or updating user accounts in each org, which would be time-consuming and error-prone. References: Salesforce as an Identity Provider, Identity Providers and Service Providers, Just-in-Time Provisioning for SAML

NEW QUESTION # 48

Universal Containers (UC) uses Active Directory (AD) as their identity store for employees and must continue to do so for network access. UC is undergoing a major transformation program and moving all of their enterprise applications to cloud platforms including Salesforce, Workday, and SAP HANA. UC needs to implement an SSO solution for accessing all of the third-party cloud applications and the CIO is inclined to use Salesforce for all of their identity and access management needs.

Which two Salesforce license types does UC need for its employees'

Choose 2 answers

- A. Chatter Only and Identity licenses
- B. Company Community and Identity licenses
- C. Salesforce and Identity Connect licenses
- D. Identity and Identity Connect licenses

Answer: C,D

Explanation:
Explanation
The two Salesforce license types that UC needs for its employees are Identity and Identity Connect licenses.
According to the Salesforce documentation, "Identity licenses let your employees access any app that supports standards-based single sign-on (SSO). Identity Connect licenses let you integrate your Active Directory with Salesforce." Therefore, option B and D are the correct answers. References: [Identity Licenses]

NEW QUESTION # 49

Universal containers(UC) wants to integrate a third-party reward calculation system with salesforce to calculate rewards. Rewards will be calculated on a schedule basis and update back into salesforce. The integration between Salesforce and the reward calculation system needs to be secure. Which are the recommended best practices for using Oauth flows in this scenario? Choose 2 answers

- A. Oauth refresh token flow
- B. Oauth SAML bearer assertion flow
- C. Oauth Username-password flow
- D. Oauthjwt bearer token flow

Answer: A,D

Explanation:
Explanation
OAuth refresh token flow and OAuth JWT bearer token flow are the recommended best practices for using OAuth flows in this scenario. These flows are suitable for server-to-server integration scenarios where the client application needs to access Salesforce resources on behalf of a user. The OAuth refresh token flow allows the client application to obtain a long-lived refresh token that can be used to request new access tokens without requiring user interaction. The OAuth JWT bearer token flow allows the client application to use a JSON Web Token (JWT) to assert its identity and request an access token. Both flows provide a secure and efficient way to integrate with Salesforce and the reward calculation system. OAuth SAML bearer assertion flow is not a recommended best practice for using OAuth flows in this scenario because it requires the client application to obtain a SAML assertion from an identity provider, which adds an extra layer of complexity and dependency. OAuth username-password flow is not a recommended best practice for using OAuth flows in this scenario because it requires the client application to store the user's credentials, which poses a security risk and does not support two-factor authentication.
