PDF format is pretty much easy to use for the ones who always have their smart devices and love to prepare for ISA/IEC 62443 Cybersecurity Fundamentals Specialist (ISA-IEC-62443) exam from them. Applicants can also make notes of printed ISA-IEC-62443 Exam Material so they can use it anywhere in order to pass ISA/IEC 62443 Cybersecurity Fundamentals Specialist (ISA-IEC-62443) with a good score.

Time is valued especially when we are all caught up with plans and still step with the handy matters. If you suffer from procrastination and cannot make full use of your sporadic time during your learning process, it is an ideal way to choose our ISA-IEC-62443 training materials. We can guarantee that you are able not only to enjoy the pleasure of study but also obtain your ISA-IEC-62443 Certification successfully. You will have a full understanding about our ISA-IEC-62443 guide torrent after you have a try on our ISA-IEC-62443 exam questions.

The study system of our company will provide all customers with the best study materials. If you buy the ISA-IEC-62443 study materials of our company, you will have the right to enjoy all the ISA-IEC-62443 study materials from our company. More importantly, there are a lot of experts in our company; the first duty of these experts is to update the study system of our company day and night for all customers. By updating the study system of the ISA-IEC-62443 study materials, we can guarantee that our company can provide the newest information about the exam for all people. We believe that getting the newest information about the exam will help all customers pass the ISA-IEC-62443 Exam easily. If you purchase our study materials, you will have the opportunity to get the newest information about the ISA-IEC-62443 exam. More importantly, the updating system of our company is free for all customers. It means that you can enjoy the updating system of our company for free.

ISA/IEC 62443 Cybersecurity Fundamentals Specialist Sample Questions (Q145-Q150):

NEW QUESTION # 145

Which protocol is commonly used for managing the security of message transmission on the Internet via web browsers?

- A. TLS
- B. L2TP
- C. PPTP
- D. IPsec

Answer: A

Explanation:

Transport Layer Security (TLS) is the standard protocol for securing web communications, including HTTP over TLS (HTTPS) in web browsers. TLS provides encryption, authentication, and data integrity, and has replaced SSL as the primary means of securing browser-based communications.

Reference: ISA/IEC 62443-3-3:2013, Section 4.2.3.7 ("Use of TLS for secure communication"); NIST SP 800-52 Rev. 2.

NEW QUESTION # 146

As related to IACS Maintenance Service Providers, when do maintenance activities generally start?

- A. At the beginning of the project
- B. Before the handover of the solution
- C. During the design phase
- D. After the handover of the solution

Answer: D

Explanation:

In the context of ISA/IEC 62443, maintenance activities by IACS Maintenance Service Providers generally begin after the solution (such as a control system or automation project) is handed over to the asset owner.

This marks the transition from project (installation and commissioning) to operational maintenance, which includes patching, updating, and other support activities as part of the system lifecycle.

Reference: ISA/IEC 62443-2-4:2015, Section 4.3.3 ("Service provider maintenance activities after handover").

NEW QUESTION # 147

Which of the following can be employed as a barrier device in a segmented network?

Available Choices (select all choices that are correct)

- A. Domain controller
- B. Unmanaged switch
- C. VPN
- D. Router

Answer: D

NEW QUESTION # 148

Which is a PRIMARY reason why network security is important in IACS environments?

Available Choices (select all choices that are correct)

- A. PLCs use serial or Ethernet communications methods.
- **B. PLCs under cyber attack can have costly and dangerous impacts.**
- C. PLCs are programmed using ladder logic.
- D. PLCs are inherently unreliable.

Answer: B

Explanation:

Network security is important in IACS environments because PLCs, or programmable logic controllers, are devices that control physical processes and equipment in industrial settings. PLCs under cyber attack can have costly and dangerous impacts, such as disrupting production, damaging equipment, compromising safety, and harming the environment. Therefore, network security is essential to protect PLCs and other IACS components from unauthorized access, modification, or disruption. The other choices are not primary reasons why network security is important in IACS environments. PLCs are not inherently unreliable, but they can be affected by environmental factors, such as temperature, humidity, and electromagnetic interference. PLCs are programmed using ladder logic, which is a graphical programming language that resembles electrical schematics. PLCs use serial or Ethernet communications methods, depending on the type and age of the device, to communicate with other IACS components, such as human-machine interfaces (HMIs), supervisory control and data acquisition (SCADA) systems, and distributed control systems (DCSs). NEW QUESTION # 149

Which of the following starts at a high level and includes all ANSI/ISA-95 Level 0,1,2,3,4 equipment and information systems?

- A. Reference architecture
- **B. Reference model**
- C. Zone model
- D. Asset model

Answer: B

Explanation:

The reference model described in ISA/IEC 62443-1-1 (see Figure 2) starts at a high level and encompasses all levels of the ISA-95 model (Levels 0 to 4), which range from field devices up to business logistics systems.

This model provides a holistic, layered view of all the equipment, systems, and information flows in industrial automation.
