There are numerous AZ-104 exam dumps for the candidates to select for their preparation the exams, some candidates may get confused by so many choice. Our AZ-104 learning materials have free demo for the candidates, and they will have a general idea about the AZ-104 Learning Materials. You can obtain the AZ-104 learning materials for about ten minutes. The payment is also quite easy: online payment with credit card, and the private information of the you is also guaranteed.

Microsoft AZ-104 exam is designed for individuals who want to become certified Azure administrators. AZ-104 exam measures the candidate's knowledge and skills in managing Azure resources, implementing and managing storage solutions, configuring and managing virtual networks, and managing Azure identities and governance. It is intended for individuals who have experience working with Azure services and have a fundamental understanding of cloud computing concepts.

Module 2: Storage Implementation and Management

The second domain throws light on the Azure implementation and storage, including the administration of storage accounts, setting up blob storage alongside Azure files, and handling data management tasks for Azure Storage. The details include the replication implementation, Azure account generation, import as well as export from Azure jobs, utilizing AZCopy, the configuration of blob object replication and lifecycle management, etc.

The Microsoft AZ-104 Exam measures the candidate's ability to manage Azure subscriptions, configure and manage virtual networks, manage Azure identities and governance, and implement and manage storage. AZ-104 exam also evaluates the candidate's knowledge in monitoring and backing up Azure resources, managing Azure security, and implementing and managing Azure compute resources.

Microsoft Azure Administrator Sample Questions (Q249-Q254):

NEW QUESTION # 249

You need to configure the Device settings to meet the technical requirements and the user requirements.

Which two settings should you modify? To answer, select the appropriate settings in the answer area.

Answer:

Explanation:

NEW QUESTION # 250

You have an Azure Active Directory (Azure AD) tenant that has the initial domain name.

You have a domain name of contoso.com registered at a third-party registrar.

You need to ensure that you can create Azure AD users that have names containing a suffix of @contoso.com.

Which three actions should you perform in sequence? To answer, move the appropriate cmdlets from the list of cmdlets to the answer area and arrange them in the correct order.

Answer:

Explanation:

Explanation

The process is simple:

- * Add the custom domain name to your directory
- * Add a DNS entry for the domain name at the domain name registrar
- * Verify the custom domain name in Azure AD

NEW QUESTION # 251

You plan to deploy several Azure virtual machines that will run Windows Server 2019 in a virtual machine scale set by using an Azure Resource Manager template.

You need to ensure that NGINX is available on all the virtual machines after they are deployed.

What should you use?

- A. the New-AzConfigurationAssignment cmdlet
- B. Azure Application Insights
- C. the Publish-AzVMDscConfiguration cmdlet
- D. a Desired State Configuration (DSC) extension

Answer: D

NEW QUESTION # 252

You have an Azure subscription that contains the resources in the following table.

You install the Web Server server role (IIS) on VM1 and VM2, and then add VM1 and VM2 to LB1.

LB1 is configured as shown in the LB1 exhibit. (Click the LB1 tab.)

Rule1 is configured as shown in the Rule1 exhibit. (Click the Rule tab.) For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Explanation

Box 1: Yes

A Basic Load Balancer supports virtual machines in a single availability set or virtual machine scale set.

Box 2: Yes

When using load-balancing rules with Azure Load Balancer, you need to specify health probes to allow Load Balancer to detect the backend endpoint status. The configuration of the health probe and probe responses determine which backend pool instances will receive new flows. You can use health probes to detect the failure of an application on a backend endpoint. You can also generate a custom response to a health probe and use the health probe for flow control to manage load or planned downtime. When a health probe fails, Load Balancer will stop sending new flows to the respective unhealthy instance. Outbound connectivity is not impacted, only inbound connectivity is impacted.

Box 3: No

NEW QUESTION # 253

You have an Azure Load Balancer named LB1.

You assign a user named User1 the roles shown in the following exhibit.

Answer:

Explanation:

NEW QUESTION # 254
