EMC Dell Information Storage and Management Foundations v2 Exam Sample Questions (Q52-Q57):

NEW QUESTION # 52
Question:
A company is looking for a continuous data protection solution that can provide any point-in-time recovery.
Which Dell solution is most suitable for this requirement?

- A. Dell TimeFinder SnapVX
- B. Dell Cloud Tier
- C. Dell SRDF
- D. Dell RecoverPoint

Answer: D

Explanation:
Dell RecoverPoint is a continuous data protection (CDP) solution that uses journaling to provide any point-in- time recovery of data. It continuously captures and replicates data changes, storing them in a journal to enable precise recovery to any required point in the past.
* Dell SRDF (Symmetrix Remote Data Facility):Provides synchronous/asynchronous replication, not CDP.
* Dell TimeFinder SnapVX:Creates point-in-time snapshots but doesn't offer continuous journaling.
* Dell Cloud Tier:Used for archiving older data to the cloud.

NEW QUESTION # 53
Question:
What is the role of the storage node in a backup architecture?

- A. To organize and write data to the backup device
- B. To perform data deduplication and compression
- C. To manage the backup
- D. To monitor the health of the backup infrastructure

Answer: A

Explanation:
A storage node is a component in a backup architecture that handles the actual data movement during the backup process:
It organizes the backup data stream.
It writes the data to the backup target (disk, tape, or cloud).
It does not manage policies or schedules (that's the role of the backup server or management console).
* Option A:Monitoring is done by the backup server or management tools.
* Option C:Backup management (scheduling, policies) is also handled by the backup server.
* Option D:Deduplication may be part of the process but is not the primary role of a storage node.
Reference:Dell Information Storage and Management Foundations 2023 Study Guide, Section: Backup Architecture - Components.

NEW QUESTION # 54
Question:
A storage administrator needs to track the performance and availability of storage components and services.
Which storage management function would provide this information?

- A. Infrastructure discovery

- B. Reporting
- C. Monitoring
- D. Alerting

Answer: C

Explanation:
Monitoringis the ongoing process of observing and tracking the performance and availability of IT infrastructure, including:
Storage devices
File systems
Ports and connectivity
It helps ensure service levels are met and detect potential issues.
* Reporting: Summarizes data (often based on monitoring data).
* Alerting: Notifies of specific events or thresholds (also uses monitoring data).
* Infrastructure discovery: Detects and inventories devices.
Reference:Dell Information Storage and Management Foundations 2023 Study Guide, Section: Storage Infrastructure Management Functions.

NEW QUESTION # 55
Question:
What are the two benefits of using sub-LUN tiering?

- A. Cost optimization
- B. Reduced need for storage tiering policies
- C. Granular control over data placement
- D. Reduced need for storage capacity
- E. Simplified storage management

Answer: A,C

Explanation:
Sub-LUN tiering allows for the movement of data at a more granular level within a Logical Unit Number (LUN), enabling:
* Granular control over data placement:Specific data blocks can be moved to appropriate storage tiers based on access patterns.
* Cost optimization:Frequently accessed data resides on high-performance (and more expensive) storage, while less accessed data is moved to cost-effective storage, optimizing overall storage costs.
Other options:
* Reduced need for storage capacity:Not directly impacted by sub-LUN tiering.
* Reduced need for storage tiering policies:Policies are still required to manage data movement.
* Simplified storage management:While sub-LUN tiering adds efficiency, it may introduce complexity in management.
Reference:Dell Information Storage and Management Foundations 2023 Study Guide, Section: Storage Provisioning and Tiering.

NEW QUESTION # 56
Question:
An organization is planning to adopt pre-integrated systems to deploy compute, network, storage, and management functions as a single engineered solution. Which approach should they adopt?

- A. DCaaS solution
- B. DIY approach
- C. Vendor ready solutions
- D. Service based approach

Answer: C

Explanation:
Vendor ready solutions(like Dell VxRail or HCI appliances) are pre-integrated and pre-tested by the vendor, providing:
Faster deployment.
Simplified management.
Reduced integration effort compared to DIY solutions.
* DCaaS(Data Center as a Service) is a managed service, not an on-prem solution.

* DIYinvolves separate purchases and integrations by IT teams.
* Service-based approachrefers to cloud models or managed services.
