totally depend on the CIS-Discovery Guide files of our company when you are preparing for the exam.

How to Study the Certified Implementation Specialist - Discovery (CIS Discovery) Exam

Prepare yourself according to the style and essence of your **CIS Discovery practice exams** questions. So it's easier to get the format of your exam and then train yourself accordingly.

When installed and working, ServiceNow Discovery is an excellent method for tracking the status and health of your corporate network. You can automate a mix of both routine and advanced device knowledge to populate your CMDB. With a well-populated CMDB, machine reporting becomes more accurate, insightful, and relevant to important business decisions. Improving the infrastructure further with Orchestration to automate system adjustments and upgrades and Service Mapping to determine the dependencies and effect of service outages will turn the company dramatically by reducing any instances of resolution time.

It is not enough to research a topic just once. The courses of research should be checked by the student as many times as possible throughout the academic session from the frequently updated **CIS Discovery exam dumps**. One time research will help you understand the topic to some degree, but you learn more and more as you revisit it. Students ought to retain what they learned so that they can reproduce their learning when writing their tests. Adjusting a topic a few times allows the pupil to hold the awareness (understanding) of the matter in his head for a very long period.

Each topic has a set of sample questions and **CIS Discovery practice exams**. Learn the sample queries. Plays the format and essence of the test. It tells you which kind of question you're going to pose in your test. If you have an understanding of the style of your test, you should brace yourself for your exam accordingly. Your college or academy may take part in certain tests a few months before the final exam. Please aim to take these exams. It informs you of the extent of your training at a given period for the final test.

ServiceNow Certified Implementation Specialist - Discovery Sample Questions (Q32-Q37):

NEW QUESTION # 32

What role is needed by the MID Server's user account to interact with a ServiceNow instance?

- A. mid_server
- B. sm_mid
- C. discovery_admin
- D. mid_discovery

Answer: A

Explanation:

The MID Server's user account must have the mid_server role to interact with a ServiceNow instance. This role allows the MID Server to access protected tables and perform discovery and orchestration tasks on behalf of the instance. The other roles are not related to the MID Server functionality. The discovery_admin role is for configuring and managing discovery, the sm_mid role is for using the Service Mapping MID Server, and the mid_discovery role is for running discovery probes and sensors.

References:

- * Setting up MID Server user and role
- * Configure Windows MID Server service credentials
- * Correcting MID Server Windows service account user and permissions

NEW QUESTION # 33

File-based Discovery is triggered during the .

- A. Scan Phase
- B. Classify Phase
- C. Identification Phase
- D. Exploration Phase
- E. Pattern Phase

Answer: D

NEW QUESTION # 34

Which of the choices have a higher chance of leading to lost data during CI reclassification? (Choose two.)

- A. Downgrading
- B. Upgrading
- C. Identifying
- D. Switching

Answer: A,D

Explanation:

CI reclassification is the process of changing the class of a CI in the CMDB based on the discovery data. It can be done manually or automatically, depending on the configuration settings. CI reclassification can result in data loss if the new class has fewer or different attributes than the original class, and the existing attribute values are not preserved or mapped to the new class. This can happen when a CI is switched to a different class hierarchy, such as from a Linux Server to a Windows Server, or when a CI is downgraded to a less specific class, such as from a Database to a Software Instance. Therefore, switching and downgrading have a higher chance of leading to lost data during CI reclassification.

NEW QUESTION # 35

One method for deleting specific CIs not discovered in 30 days is:

- A. Scheduled Job
- B. Service Mapping
- C. Data Policy
- D. UI Policy

Answer: A

Explanation:

One method for deleting specific CIs not discovered in 30 days is to use a scheduled job that runs a script to query the CMDB for CIs that have not been updated by Discovery for a certain period of time, and then delete them or mark them as retired. This method can help you keep your CMDB clean and accurate, and avoid having stale or obsolete CIs. You can configure the scheduled job to run at a specific frequency and time, and specify the criteria for selecting the CIs to delete.

1: Automated way to disable/retire CIs not updated for 45 days, ServiceNow CIS-Discovery Sample Questions

NEW QUESTION # 36

Which of the following pattern operations query targets? (Choose two.)

- A. Parse Variable
- B. Merge Table
- C. Get Process
- D. WMI Query

Answer: C,D

Explanation:

Pattern operations are the building blocks of patterns that define the logic and actions to perform on the target CIs. Some pattern operations query targets to retrieve information or execute commands, while others manipulate data or perform other tasks. WMI Query and Get Process are examples of pattern operations that query targets. WMI Query executes a Windows Management Instrumentation (WMI) query on a Windows target and stores the results in a variable. Get Process executes a command to list the processes running on a target and stores the results in a variable¹².
