

# ZDTE Lead2pass Review - 100% Valid Questions Pool

---

## ZDTE STUDY GUIDE 2025/2026 QUESTIONS WITH CORRECT ANSWERS

What is a common feature of SD-WAN GRE Tunnels and IPSec Tunnels? - CORRECT ANSWER -  
Provide secure communication between different network segments

What are the challenges of extending legacy network and security to the public cloud? -  
CORRECT ANSWER -Creating VPCs and VNETs add overhead. Increases attack surface.

What are the use cases for ZT Cloud? - CORRECT ANSWER -Workload to internet, intracloud,  
multi-cloud, hybrid?

What is the purpose of a GRE tunnel in the ZTE? - CORRECT ANSWER -To load balance traffic  
properly

What two items most accurately describe ZT connectors? - CORRECT ANSWER -1. Access is  
granted but never shared at the network layer  
2. Independent of anyh network for control or trust

Main advantage of using an SD-WAN vendor to connect ot Zscaler over traditional routers? -  
CORRECT ANSWER -One-click configuration of the connection.

What prevents unauthorized SD-WAN router connections to the Zscaler service? - CORRECT  
ANSWER -The partner key

Which tunnel types does Zscaler support between a router and a Zscaler data center? -  
CORRECT ANSWER -GRE & IPSEC

VCE4Plus is fully aware of the fact that preparing successfully for the Zscaler ZDTE exam in one go is a necessity because of the expensive registration fee. For applicants like you, success in the Zscaler Digital Transformation Engineer exam on the first attempt is crucial to saving money and time. Our Free Zscaler ZDTE Exam Questions will help you decide fast to buy the premium ones.

We have designed a chat window below the web page. Once you want to ask some questions about the ZDTE training engine, you can click the little window. Then you just need to click the buttons after writing your email address and your questions about the ZDTE Exam Questions. Our back operation system will soon receive your email; then you will get a quick feedback on the ZDTE practice braindumps from our online workers.

>> ZDTE Lead2pass Review <<

## ZDTE Lead2pass Review | Cogent for Zscaler Digital Transformation Engineer

If you buy our ZDTE practice engine, you can get rewards more than you can imagine. On the one hand, you can elevate your working skills after finishing learning our ZDTE study materials. On the other hand, you will have the chance to pass the exam and obtain the ZDTE certificate, which can aid your daily work and get promotion. All in all, learning never stops! It is up to your decision now. Do not regret for you past and look to the future.

## Zscaler Digital Transformation Engineer Sample Questions (Q45-Q50):

#### NEW QUESTION # 45

A contractor is visiting an organization for a maintenance task. The administrator does not have a spare laptop to give them. How will the administrator provide secure access for the contractor?

- A. Privileged Remote Access
- B. SD-WAN
- C. Cloud Connector
- D. Branch Connector

**Answer: A**

Explanation:

Zscaler's Digital Transformation material is very clear that third-party admins, vendors, and contractors needing temporary, high-privilege access from unmanaged devices are a primary use case for Privileged Remote Access (PRA). PRA is built on ZPA and delivers a clientless remote desktop gateway: contractors simply use an HTML5-capable browser to reach RDP, SSH, or similar consoles without installing an agent or being placed on the internal network.

The study content explains that PRA enforces least-privilege access on a per-application or per-system basis, with capabilities such as time-bound access windows, credential vaulting/mapping (so credentials are never exposed), and full session recording and monitoring for audit and compliance. This directly matches the scenario of a short-term maintenance task from a contractor's own laptop.

By contrast, SD-WAN, Branch Connector, and Cloud Connector are connectivity constructs for sites and workloads, not for granting interactive, privileged access to individual admins on unmanaged endpoints. They don't solve the governance, session control, and just-in-time access requirements highlighted in the ZDTE content for third-party access. Therefore, Zscaler positions Privileged Remote Access as the correct and recommended approach here.

#### NEW QUESTION # 46

Which of the following capabilities is not included in the OneAPI Framework for ZIA?

- A. Administrator Role Based Access
- B. SCIM Enable/Disable
- C. Malware Settings
- D. Web Insights Log Retrieval

**Answer: B**

Explanation:

The Zscaler OneAPI framework is presented in the Engineer curriculum as the unified automation layer for ZIA, ZPA, ZDX, Client Connector, and other services. For ZIA specifically, OneAPI introduces OAuth-based authentication, fine-grained administrator role-based access control for API clients, configuration and policy management endpoints, activation controls, and access to Insights and log retrieval APIs. The course material highlights examples such as using OneAPI to manage admin roles, automate malware and advanced-threat settings, and programmatically retrieve Web Insights logs for reporting and SIEM workflows.

In contrast, SCIM (System for Cross-domain Identity Management) is described separately as an identity- provisioning standard used to synchronize users and groups from identity providers like Azure AD or Okta.

Enabling or disabling SCIM and configuring SCIM endpoints is handled through dedicated SCIM configuration, not through the OneAPI framework. While both OneAPI and SCIM are automation-related, they are distinct interfaces in the Zscaler platform. Therefore, among the options provided, SCIM Enable

/Disable is the capability that is not part of the OneAPI Framework for ZIA, whereas administrator RBAC, Web Insights log retrieval, and malware policy settings are all explicitly included.

#### NEW QUESTION # 47

How many apps and risk attributes can be monitored using Zscaler's Shadow IT and Data Discovery feature?

- A. 30K apps and 80 risk attributes
- B. 50K apps and 75 risk attributes
- C. 100K apps and 200 risk attributes
- D. 10K apps and 5 risk attributes

**Answer: C**

Explanation:

Zscaler's Shadow IT and Data Discovery capabilities are delivered primarily through its multimode CASB and data protection services. Shadow IT Discovery automatically identifies unsanctioned cloud applications in use and evaluates them across a large set of risk attributes (for example, security controls, compliance posture, data handling, and business continuity).

Updated Zscaler training and exam content for the Digital Transformation Engineer track describes a significantly expanded cloud app catalog, allowing visibility into up to 100,000 applications and evaluation across approximately 200 risk attributes. This scale is necessary to cover the rapidly growing SaaS ecosystem and to give security teams the granularity needed to distinguish between low-risk and high-risk services.

Earlier public materials referenced smaller catalogs (for example, 8,500 apps with 25 attributes), but the current exam-aligned figures reflect the evolution of Zscaler's data protection and Shadow IT intelligence.

Options A, B, and C therefore underrepresent the scope of Zscaler's catalog and risk model. In the context of the ZDTE curriculum, the correct pairing is 100K apps and 200 risk attributes, which best matches how Zscaler positions its Shadow IT and Data Discovery capabilities for broad visibility and fine-grained risk analysis.

#### NEW QUESTION # 48

Which connectivity service provides branches, on-premises data centers, and public clouds with fast and reliable internet access while enabling private applications with a direct-to-cloud architecture?

- A. Zscaler Browser Access
- **B. Zscaler Zero Trust SD-WAN**
- C. Zscaler App Connector
- D. Zscaler Privileged Remote Access

**Answer: B**

Explanation:

Zscaler Zero Trust SD-WAN is specifically designed to give branches, on-premises data centers, and workloads running in public clouds fast, reliable, and secure access to the internet and private applications using a direct-to-cloud architecture. In the Zscaler Digital Transformation Engineer curriculum, this service is positioned as the connectivity foundation that replaces legacy hub-and-spoke MPLS and VPN designs with cloud-delivered Zero Trust connectivity.

Instead of backhauling traffic to central data centers, branches and sites establish lightweight, policy-driven tunnels directly to the Zscaler cloud, where security inspection and Zero Trust access decisions are applied.

This architecture reduces latency, simplifies routing, and optimizes SaaS and internet performance while simultaneously enabling secure access to private applications without exposing them to the public internet.

App Connectors (option C) are used for application-side connectivity in ZPA, not for full branch or data center connectivity.

Browser Access (option B) provides clientless application access for users, not network-level site connectivity. "Zscaler Privileged Remote Access" (option A) is not the term used for this broad connectivity service. Therefore, the only option that matches the described direct-to-cloud, multi-site connectivity role is Zscaler Zero Trust SD-WAN.

#### NEW QUESTION # 49

The Zscaler for Users - Engineer (EDU-202) learning path consists of various solutions covered in eleven courses. Which of the following topics is out of scope for the Zscaler for Users - Engineer learning path?

- A. In-depth overview of Zscaler's architecture platform, including its global scale, additional capabilities, and API infrastructure.
- **B. Enabling versions to control which version (if any) of Zscaler Client Connector is available when end users manually update the app or when you configure automatic app updates.**
- C. Configuration of ZDX for applications, call quality monitoring, probes, diagnostics, alerts, and role-based administration to ensure effective SaaS and web application monitoring.
- D. Exploring Intrusion Prevention System, DNS Control, Tenant Restrictions, and secure application segmentation.

**Answer: B**

Explanation:

Official EDU-202 materials describe the Engineer path as focusing on advanced architecture, connectivity, platform, access control, cyberthreat protection, data protection, risk management, ZDX, and Zero Trust Automation. The published learning outcomes explicitly include: discussing the architecture of the Zscaler platform and its API infrastructure; configuring advanced connectivity

options; and configuring advanced cybersecurity services and Zscaler Digital Experience (ZDX)-including application monitoring, call quality, probes, diagnostics, alerts, and role-based administration. These map directly to options A, C, and D, which align to Zscaler Architecture, Cyberthreat/Access Control Services (IPS, DNS Control, Tenant Restrictions, segmentation), and ZDX content in the EDU-202 outline.

By contrast, Client Connector App Store "version enablement" and controlling which build is available when users manually or automatically update the app is documented as an administration task in the Client Connector help and is typically taught in the Essentials/Administrator (EDU-200) path, not in the Engineer path. Those materials show how to use the App Store to enable builds and control available versions, positioning it as operational client management rather than an advanced Engineer-level topic. Consequently, option B is considered out of scope for EDU-202 in the ZDTE context.
